One of the more idiotic posts I have read. The discone is a good scanner antenna. Your looking for signals from all directions so it certainly meets that criteria. Then after telling you to "try something else" his post was totally absent of alternatives. What a putz!

I didn't know the asking price of $300 was too high. So, down to $275

have my Uniden BC780XLT for sale. I am going on a trip and need to sell
it ASAP
. Paypal preferred. my ebay feedback can vouch for my reputation
(over 250) The unit is in 9/10 cosmetic shape, some very small paint drops
on it from remodel (they will be gone upon shipping) 10/10 electronic
condition. I will include manual, power supply, 2 antennas and
original box. I leave wednesday late, so today is the last day available. I
will sacrifice for $275 shipped conus (lower 48). Photos upon request.

Walt;

Thanks for the reply. What I am confused about is the PRO-93
displaying frequencies that are NOT programmed into the scanner. I
have 10 freqs programmed for the San Bernardino CA PD. The display
shows freq values that are not in that group, but the audio traffic is
what I expect to be hearing,

It is kind of tough to compare these two radios. While the BC785 will be pretty similar to the current BC780 but with more channels, digital capability (with an add-on card) and a few additional features the R7000 is in a separate class of radio altogether. The R7000 is more of a tunable receiver with scan capabilities than a true scanner. With the relatively lethargic scan speed and the different scan methods (The R7000 allows you to stay on a channel for 5 or 15 seconds the rescans) it really isn't intended for the type scanning a BC780, 785 or other more conventional scanner is.

In addition to that, the R7000 has no trunktracking capability unless you use it with a computer based application and interface. No digital mode either. Conversely, the R7000 allows a user to twiddle the dial at some useful step sizes, has SSB, and several other features useful to the professional user.

The R7000 is almost Mil-Spec in quality and construction, but does require occasional retuning and maintanence. The 780/785 has a better form factor for mobile use. (Try mounting the R7000 under the dash of your Ford Fiesta!).

I have both the R7000 and several BC780's. I will have a couple 785's when available. They are all great radios, but serve different purposes.

From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3D62DF0A.9741A15D@optonline.net>
Source record: 44607

Let me try again.

The Control Channel broadcasts a command that says essentially
"Receivers in Talkgroup xxx tune to frequency yyy". The frequency yyy
is broadcast as a Hex number. The PRO-93 and BC780 scanner software has
the ability, if the system is a MOT 800/900 system, to translate that
Hex number into a valid 800/900 Mhz frequency, and tune the radio to
that frequency. The frequency does not have to be entered into the list
of frequencies stored in the radio.

In other trunktracking scanners, the scanner software has the ability to
translate the Hex number into an 800/900 frequency, but that frequency
must have been previously entered into the list of frequencies, and the
software tells the scanner to "tune" to the channel containing that
frequency.

Hope this helps.

Walt

I agree, I use think Discones were great. After all you see lots of
them on military bases and at NASA.... However after having a
Scantenna I was shocked to learn how poor a discone actually recieves.
Granted you get low VSWR for transmitting however you do not get any
gain....

Hi Fella's

I want to install a scanner in my Jeep and need some advice on what
you guy's think would be the best model. I need really good sounding
audio that will probably be at a fairly high volume most of the time,
additionally the audio will be passed through an excellent external
speaker, superb sensitivity, selectivity and ruggedness. She will
get bounced around a lot. :-).
100 channels or more, battery memory backup and as small a footprint as
possible in desktop or base configuration. $150.00 to $250.00 range.
Are there any RS products that you would recommend?

Thanks in advance

http://web.ukonline.co.uk/wildbunch/horse.htm
http://wiltshirewhitehorses.org.uk/oldwes.html
http://wiltshirewhitehorses.org.uk/wesmap.html

In the original Bratton Camp White Horse Eye, under the Ancient Mississippian (Lower Carboniferous) Limestone white stones from North American and European source areas identified below, said White Horse currently covered with several layers of portland concrete and paint. See and read above sites.

> Are you going to retrieve them or are they to remain hidden till a certain
> time?

Now's the time! BEFORE they are stolen by Osama bin Laden's London Cells on September 11, 2002! I am going to cause, with or without anyone's help, The Natural History Museum of London to TELL THE FUCKING TRUTH about Doctor Garry Whilhelm Denke's, Joseph Smith, Junior's, Sister Amelia Denke's, and Tommy (Tommyhawk) Littlepage's white Mississippian (Lower Carboniferous) geologic age stones (of

various sizes, shapes, textures, hardnesses, and source areas) in the Heel Stone ditch original backfill, which circles MY ark of MY testimony location, and the white Upper Chalk (Late Cretaceous) geologic age stones. Their (Natural History Museum's) micropaleontologists addresses and phone numbers are at URL: http://www.nhm.ac.uk/ They all know about this. THEY are trying to THIEF MY ARTIFACTS.

> I looked (searched the I.) for info on the special white stones of Caddo
> Indian Tommyhawk but couldn't find any. Obviously you know more than most on
> this subject and your background points to some possible knowledge that may
> not be readily available to all who are interested.

My three (3) sources of samples of the two (2) different types of white stones at Stonehenge and my three (3) sources of samples of the two (2) different types of white stones at Bratton (Westbury) White Horse Eye, United Kingdom, said White Horse Eye also being filled with the white Ancient Mississippian (Lower Carboniferous) geologic age stones (of various sizes, shapes, textures, hardnesses, and source areas), are discussed in brief below (I'm trying to just publish enough information to cause excavation by the right people, e.g., NOT Osama bin Laden's London Cells), which is why I have not downloaded all of my B.C. and A.D. tangible information onto a www site.

> Can you refer me to some credible information, your own site perhaps.

CALL THOSE LYING FUCKING WHORES! I gave you the phone number!

> Thanks for your time.

You're welcome.

FIRST STONES BROUGHT TO STONEHENGE: THE MISSISSIPPIAN AGE WHITE ELDERS

From: Garry Denke (GarryDenke@USA.Net)

To: Doug Weller (dweller@ramtops.demon.co.uk)

MESSAGE:

Firstly, nice try Douglas Weller but it is now known and published that Garry Denke is a degreed geologist who graduated from Arizona State University in 1977, in the top ten (10) of the ASU geology department class, that same Garry W. Denke who is currently President of Denoco Inc. of Texas, an active State of Texas corporation currently exploring for natural gas in East Texas, currently operating oil leases and wells in North Texas, and currently certified and bonded by the Railroad Commission of Texas http://www.rrc.state.tx.us, which you, Mark Purnell, Giles Miller, et al, have today again verified under the same RRC website. Secondly, as you know Douglas Weller, it is now known and published that United States geologist Garry Denke's ancestor, the German historian, antiquarian, and Doctor Garry Whilhelm Denke (b. April 19, 1622, Baden, Schwarzwald, Germany - d. February 19, 1699, Caddo confederacies, Texas), first discovered Mississippian geologic age Waulsort stones in the Waulsort (now called Aubrey) Holes and Hell (now called Heel) Stone circular ditch at Stonehenge, United Kingdom, in 1656. Thirdly, as you now know, Garry Denke's German to English translations have been corrected and edited herein from the previous authored texts of Garry Denke, as rewritten and verified by the Erodelphian Literary Society of Sigma Chi Fraternity, Arizona State University, North Texas Branch (August 9, 2002).

The authors of "Stonehenge in its landscape, twentieth-century excavations", English Heritage, 1995, referenced Professor Richard Atkinson's "hard white chalk rubble" excavated in the 1950's as being the original backfill of the Heelstone ditch at Stonehenge (Pages 171, 174). Their eolian Cretaceous geologic age "chalk" report covering this backfill was, and still is, a geological and micropaleontological lie. The Heelstone ditch, once known as Hell Stone ditch, and its backfill of Mississippian (Tournaisian) Waulsortian facies rocks (Waulsort stones) were first noticed to be different from the Cretaceous age white chalk common to Stonehenge, by German historian, antiquarian, and Doctor Garry Whilhelm Denke (b. April 19, 1622, Baden, Schwarzwald, Germany - d. February 19, 1699, Caddo confederacies, Texas), who using his medical magnifying glass compared identical physical properties of shape, texture, and hardness, and identical biological properties of fossilized creatures to Mississippian limestone common to the village of Waulsort, south of Namur, Dinant Basin, Belgium. Doctor Garry Denke's catalogued archived collection of samples from each of the Waulsort Holes and the Hell Stone ditch were preserved by the Caddo Indian (Tommy "Tommyhawk" Littlepage) of Young County, Texas, who in 1979 at the Dallas Production, Inc. #1 Littlepage Oil Well transferred said collection guardianship to Garry Denke.

Prior to the Erodelphian Literary Society preliminary 1976 Arizona State University micropaleontology of Professor Atkinson's "hard white chalk rubble" showing this Heelstone ditch backfill as not local Senonian (Late Cretaceous) Upper Chalk native to Stonehenge, but the elder Arundian (Lower Carboniferous) High Tor Limestone transported by the Neolithic builders from the Pembroke area, South Wales Coast. Sister Amelia Denke, kindergarten schoolmaster of Drums Elementary School, Drums, Pennsylvania, acquired labeled U.K./U.S Mail gathered samples of the Aubrey Holes (Waulsort Holes), Heel Stone (Hell Stone) ditch backfill, and the common Stonehenge chalk from the British antiquarian Colonel Hawley in 1961. Sister Amelia Denke who was in possession of the Denke Family Bible at the Drums Elementary School taught the Revelation of Jesus Christ's Sarsen stone and its four beasts (pictured at URL below), twenty and four white elders (microfossils) creatures, and ten thousand times ten thousand and thousands of thousands of white Cretaceous coccoliths (nannoplankton) creatures to Garry Denke, president of Sister Amelia's kindergarten class, who in turn passed the knowledge of the pictured big beast (Daniel's bear) and four beasts (lion head, ox calf head, wounded man face, USA's flying eagle), 24 white elder creatures, and 10,000 x 10,000 and 1000s of 1000s white coccolith creatures to his classmates. In 1970, at Our Lady of Grace Junior High School, in 1973 at Hazleton High School, and in 1974 at Indiana University of Pennsylvania, said elders (microfossils) were classified as shown in Table 1 below, under Sister Amelia's 1961 Collection.

[Table 1. Courtesy of Garry W. Denke]

From 1979 through 1985, Arizona State University, Sigma Chi Fraternity, and Denoco Inc. of Texas micropaleontologists verified and confirmed through an arduous comparison study financed with private funds by Garry W. Denke and Denoco Inc. of Texas, that said Sister Amelia Denke's Drums Elementary School kindergarten catalogued archived collection of the above identified white Mississippian microfossils were identical to said Doctor Garry Denke's Tommy "Tommyhawk" Littlepage catalogued archived collection of the above identified Mississippian microfossils shown in Table 1 above. In 1990, Eldorado Oil and Gas, Inc. made an independent examination by electron microscope of all the samples gathered by Doctor Garry Denke in 1656 and Colonel Hawley in 1961 and determined that there were no nannoplankton coccoliths in the stones from the Aubrey Holes and Heelstone ditch backfill. Furthermore, the samples of the white Cretaceous chalk from both the 1656 and 1961 collections at Stonehenge were identical, but when compared to Doctor Garry Denke's Westbury White Horse Eye collection of 1656, it was discovered that the Cretaceous nannoplankton coccoliths were more similar to the Cretaceous Austin Chalk coccoliths of East Texas Field which crops out in Plano, Texas. Each of the above Mississippian archived microfossils, with catalogue, were U.S. certified mailed in 1994 to all seven of the Silent Partner Owners listed in Table 2 below.

Doctor Garry Denke's 1656 and Sister Amelia Denke's 1961 collections of the first stones of Stonehenge from inside and outside the Aubrey Holes and Heelstone ditch, and Doctor Garry Denke's collections of stones inside and outside the Bratton Camp White Horse Eye http://www.wiltshirewhitehorses.org.uk/westbury.html Westbury White Horse Eye, with catalogues, are archived in cased glass at the RRC Texas Oil Field in Baylor County, G'S US. Glass encasement was performed on December 1, 1993 by Fraco Services, Inc. of Holliday, Texas. The RRC website URL is http://www.rrc.state.tx.us/ and there is no entrance fee to see the oilfield of G'S US. Currrently under study at the laboratories of Denoco Inc. of Texas are the micropaleontological archived catalogued collections from 42 Waulsortian facies collection sites located in the Dinant Basin, south of Namur, Belgium, Pembroke, Derbyshire, the Pennines of England and Ireland, central France, Upper Banff Formation of Grotto Mountain, Alberta, Big Snowy Mountains of Montana, Boone Formation of Ozark Dome, Oklahoma, Sacramento Mountains of New Mexico, and the Llano Uplift of Texas, whereat the white Mississippian Chappel Reef limestone of RRC Texas Oil Field in Archer County, Revelation, crops out. Garry Denke, Geologist EIN'S TIN: 75-2554014 conclusion from his detailed micropaleontological comparison of the 42 collection sites located in the above listed areas shows all twenty-four (24) Mississippian elders named in Table 1 above being identical from all areas studied.

Call for papers.

What he is talking about is the Global Positioning System for tracking the police cars. In our city the cops have gone encrypted digital and with that they have a data stream from the GPS receivers in each car so that the communications center can know exactly ware each car is at any given monument in time.

No.

There is a "mod" floating around that, when performed, allows the scanner to DISPLAY 800 MHz freqs, however, it will not actually RECEIVE 800 MHz signals. The circuitry needed is not there. I have a 2021, I've tried the mod, it simply doesn't work.

Oh sorry. In Canada I am not sure what it is worth. Since we have Canadian models. EU type. Full unblocked with US bandplan. Anyways. I don't know the US $ worth for it. Since someone down below us would know.

To Bigdaddyking

Thanks for that answer !

It does help a lot to answer : One of the more idiotic posts I have read

:+(I'm might be not used to the "habits" of that news group and by "such reactions" ...

:+) ... however I've got positive answers & field experiences about antennas like
Diamond D130, Icom AH 7000, AOR DA 3000, ...
... specially on the quality of construction of these antennas.

Thanks to all for that positive answers.

Marc

Sorry to Bigdaddyking or BDK !

My answer was not address to you ...

... but to to that "guy" that has specified my post as "an idiotic post"
!

Being a professional in radio since more than 18 years & an ham since
more that 23 years ..

... I do not really care about "such people or attitude" !

Just hope that such "guy" does not have a ham call even form US !

In France, we will simply call such individual as a "cretin or co..."

... in English this will probably a "real idiot".

73'

Marc

Thanks Walt....that was a big help.

As I re-read your two postings, that means that I only need to
identify the CONTROL frequencies for a particular agency and then just
program those freqs into my PRO-93.

I wish I would have known that before I went to the trouble of
entering about 90 frequencies.

Back to the drawing board. I hope this information was also of use
to someone else. I'd hate to think I am the only dummy here.

From: MRK <me@you.com>
Message-ID: <um7f10k1r7fp87@corp.supernews.com>
Source record: 44632

Is there any way to pull NTSC off of a scanner? I have a scanner capable of receiving three modes of AM, FM, and SSB. It goes up to 2.6 GHz and has a 10.7 MHz IF output. If there are any wireless cameras in my area I want to be able to rx the video. Can this be done or would it be better to hook a VFO to a video receiver?

There is a list of car assignments via #'s in the ScannerMaster Guide #6 to NYC, Metro NYC & NJ, etc. available from Scanner Master @ scanmaster@aol.com.

The guide is fantastic and covers the ENTIRE city asnd metropolitan area via frequencies and agencies that use radios, including trunked systems.

YES
7 George
would be a precinct ending in 7 (107, for example)
Sector George (G)
Since different divisions are on different freqs, that would tell you
which "7" it is

This is an optoelectronics cub frequency counter. It is in new condition. Includes rechargable battery, charger, antenna. It can be armed to lock on to a signal. Range from 1 Mhz to 2.8 Ghz.

More details are located on the optoelectonics web site http://www.optoelectronics.com/cub.htm

Working in mint condition. $95

I prefer paypal. Buyer to pay $4.00 for US priority mail.

Hi and thanks for looking....

I have an Icom U16 that I can't figure out how to set up the 16 channels for scanning. It seems to be locked in Priority Channel mode, can't get it to scan any
channel except for the Priority Channel, which I can change to any one of the 16.

I am looking for help, also looking for an owners manual, or copy of same. Will pay for copying and mailing.

Please reply to nmar@earthlink.net as I don't check into this NG very often.

thanks and 73

You have a right to monitor. Maybe they (cops) have something
to hide?

Most departments that have converted, use trunking for efficiency,
not privacy.

Hi Doug,

I own an IC-R2, VR-500, VR-120, and have
used several other models. The Yaesu VR-500
fulfills most of your requirements for
a small portable, but the VR-120 and IC-R2 may
be more reliable. Here's my advice.

Features to Forget

1) Forget about the "bug detector" feature found
in a few scanners. It is a useless distraction.

2) Forget about the bandscope feature. As implemented in most portables,
the sweep speed is too slow with extremely limited dynamic
range (the ability to discern signal levels, from weak to strong).

3) Forget about purchasing a matching carrying case.
There are dozens of cell phone carrying cases on clearance
sales in local stores which may be bought for under $5 and you
can easily find one which fits a tiny scanner.

4) Forget about SSB/CW detection unless you really want it.
The requirement to detect SSB and CW signals rules
out the IC-R2, VR-120, and some of the Alinco models.
None of the SSB/CW scanners will receive these signals well enough below
30 MHz using the stock 7" antenna.

The least expensive handheld with SSB/CW detection is
the Yaesu VR-500. You could get a used AOR AR8000 or AR8200,
but they don't meet your requirement for a tiny scanner.

5) Forget about computer *control* capability in a tiny handheld
scanner. Most of the handheld scanners have a cloning port but cannot
be computer controlled. Computer control in real time is vastly
different than using a computer to clone (program the settings)
a scanner. Dragging a computer around tethered to a tiny
scanner defeats its portability.

Other Comments

The Alinco DJ-X2's audio is the weakest of any portable I've used.
The audio is only suitable for earphone use. The membrane keypad
feels cheap.

The IC-R2 and VR-120 are good performers and probably
more reliable. My VR-500 has never failed and is easier to

use than the other two models
due to the full keypad. As others point out, the VR-500
has lots of features, though the audio output is a weak point,
and my VR-500 is more intermod prone than the IC-R2 and VR-120.

The VR-120 (not VR-120D) may be bought for $109 from
Ham Radio Outlet (free shipping),
Amateur Electronic Supply, The Ham Station, etc. That's an
excellent deal.

There's both commercial and free cloning software available for
the IC-R2 and VR-500. There's free software for the VR-120.
(See http://parnass.com for free software I wrote).

Alinco provides free Windows-only software for their smaller scanners,
but nobody else offers software for the Alincos.

I like all 3 models, but more IC-R2 and VR-120 owners seem satisfied
with their purchase than VR-500 owners.

If you haven't done it already, check out Yahoo's discussion groups.
There's a least one group for each model scanner, and multiple groups
in some cases. It's important to read through the past Yahoo groups
message archive before jumping in a with a question which
may have already been answered.

I'm sorry, but there is no such thing as a "right to monitor" and there never has been.

Like any mechanism of public outreach, agencies need to evaluate the avenues they use to reach the public. Scanners have value in that respect.

Unfortunately, people form opinions based on untoward experiences they encounter. If everyone understood that scanner traffic was not intended for gossip, and that showing up on the scene interfered with safety and the ability for people to do their jobs. When people become obstacles, rather than contributors, they develop a negative image of their constituent group - and that reflects negatively on the group as a whole. That said, there is no excuse for dropping professionalism.

With the exception of confidential information, there is nothing to hide and nearly everything is public record.

Trunking and digital technology was developed to overcome spectrum shortfalls and had no intention of obfuscation. If any agency did thiis thinking there was a hint of privacy without deliberate encryption to a defined standard by the NIST or NSA, they are deluding themselves. The only security is deliberate encryption.

Many communities have an imperative need for communications and have failed to account for this growing need for communication and data in their projected operational plans. It's no wonder that these agencies spend tons of money on communications systems and subscriber costs to public networks. A little planning would have gone a long way.

And sometimes people form opinions based on ignorance and/or
self-interest, or a need to scapegoat.

> If everyone understood that scanner traffic was not

I agree. People shouldn't gossip over their radios. EMS folks seem
to be particularly bad about the idle chitchat and gossip.

Just adding I agree with almost everything Bob said above, but the VR120
I had here was noticably inferior to the R2 in about every way. Sure,
they are a steal at $109, but I would rather pay the 30 bucks difference
(or so) and get the R2, the PL covers up the two freqs I get intermod on,
and other than those two, it's nice and calm. The VR120 was a mess, and
with no PL, one of the busier police channels would have to be skipped
until I left home.

Some time back, in Dearborn Michigan, the cable company would broadcast
main channel police radio traffic over their public access channel, instead
of the music that usually accompanies the want-ads and such.
Everyone I talked to loved it.

Thank you Mr. Parnass, it is a privilege receiving advice from you.
Looks as if I will be getting the IC-R2 then, although for the price I could
probably get the VR-120 also ($279 total from universal radio) and pickup
some better antennas too :)

Thanks again.

While my scanner was charging, I had it turned on. I left for a couple of days and forgot to turn off the scanner. Now, the scanner won't work when I turn it on. If it was connected to the charger and the charger was plugged in, why is the scanner not working now? Do I need to replace the battery in it?

Try this wed site
<http://www.grove-ent.com>
<http://www.monitoringtimes.com/html/mtairshows.html>
The Grove Military CD is a great source for base ops,
it also has pilot flip charts for each airport.

Another seller of frequency books is
<http://www.crbbooks.com>

And for the air field try <http://www.Airnav.com/>
go to Airports look up your state under
Browse by U.S. State and scroll down to St. Louis,
I'm not sure which airport they will be at?
It most likely will be SPIRIT OF ST LOUIS AIRPORT due to the large
flight ops at the international
commercial airport.
Have a great time.

On eBay: http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1375656129

Here's the posting, in case you don't want to go there now:

Probably The Best Scanner Anyone Will Ever Own

RADIO SHACK'S PRO-2042 is easily one of the best scanners the company has ever sold. The scanner I have up for auction has been professionally upgraded, making a great scanner even better. In fact, this scanner it has capabilities that scanners selling for four or five times as much do not have. It just may be the best scanner anyone will ever own.

This PRO-2042 was purchased from a top European dealer and has features the U.S. version lacks. Here are just a few of the specs: 1000 channel programmability, 10 channel storage banks and coverage of 25-520 MHz and 760-1300 MHz.

Follow this link to Tandy's Web site and you will find out everything you need to know about this superlative rig: Tandy/Radio Shack.

I know what you're thinking: If it was bought overseas then it must have a 220-volt power supply, right? Nope, I had it professionally upgraded to work on 110 volts so you do not need an power supply adapter.

I also had a professional technician install the Optoelectronics OS-535 computer-control interface, which enables you to control the scanner from your personal computer. In addition, the Opto decodes both Continuous Tone-Controlled Squelch System sub-audible tones, Digitally-Coded Squelch codes, and Dual-Tone Multi-Frequency digits. You can check the other important details at Optoelectronics' own Web site.

If none of all of this makes sense to you, go to Strong Signals and read the many articles on this scanner and computer-controlled scanning in general. While you're there, read the reviews of the PRO-2042 by one of the most knowledge radio guys around. He loves the scanner and in fact owns two of them, although mine does a lot more than either of his.

I am also including my original copy of Probe 6.0 software with this scanner. Probe 6 is by far the best and most popular scanner software on the market. Don't take my word for it. Read the reviews! One thing this software does that others do not, is boosts the radio's scanning speed up to 200% (the scanner is plenty fast right of the box). Probe 6 has far too many features for me to list here, so I suggest you check out the developer's Web site: Datafiles. You'll see a new version of Probe 7 just came out. It has a few new features but I didn't think I needed them so I didn't bother to upgrade. You're getting a legitimate (not pirated, in other words) version

of the program and you have the right to upgrade for a lot less than buying a new program.

I'll give you a quick overview of one feature that I particular like. Let's say you want one scanner with a 1000 channels for police frequencies and another scanner with 1000 channels for fire frequencies. You would normally have to buy two scanners, right? Well, with Probe, you can create "virtual scanners" and select them with a mouse click or two. You can create hundreds of these virtual scanners each with any combination of frequencies that you could possible imagine. If it's out there, you'll hear it.

So what else could you possibly need in a scanner? How about the ability to automatically program all 1000 channels in the scanner in only a few seconds without ever pushing a single programming button? This scanner has a professionally built PROgrammit interface. You cannot buy this interface on the market. It's something that only the techno-wizards know how to do. I couldn't build one, so I asked my highly paid professional technician to take care of it for me.

Even with Probe, you would have to program the scanner by hand. That's a job that can take several hours, at least. With PROgrammit, you can dump whatever frequencies you want, in any order that you want, into the scanner in just under a minute. You can download your frequencies from a spreadsheet or a database program. Even better, you can take any of your virtual scanners in Probe and shoot them right into your scanner! Today, you want 1000 channels of ambulance, MedFlight and other medical emergency frequencies. Tomorrow, it might be frequencies used at football games, NASCAR and other sports. The day after, drive-thru restaurants, airports, traffic helicopters and audio from your favorite TV stations.

What's more, the PRO-2042 runs off AC or car battery, so if you travel a lot you can quickly program the scanner for the area you are visiting and take it with you and never miss a single exciting listening opportunity. You can read all about the PROgrammit at the inventor's own Web site: PROgrammit. I' m also including the latest version of PROgrammit software on CD so you can get started right away.

Now, what about the condition of all of this stuff? In one word. Perfect. The scanner looks brand new. Everything works superlatively. I am including all of the manuals, software, cables and original packing materials. Everything looks like it was bought yesterday.

If the scanner is so great, why am I selling it? I have too many scanners already and hardly ever use this one. I'm also looking to buy myself a fancy telescope and I need to scrape up some extra money for it or my wife will certainly have me sleeping in the garage. She is indulgent, but as she is quick to tell anyone, she's not a dope.

This is a rare opportunity to buy one of the best scanners anyone could ever own. Heck yeah, I'm biased, so I ask you to check around. Read the reviews, talk to the experts and all of that. I particularly like the Strong Signals site but there are several scanner-oriented sites on the Web and any search

engine will get you to where you want to go. I guarantee that you will not be disappointed. One other thing, this scanner is capable of doing A LOT more than I have described. Send me an e-mail if you have questions about what it can or cannot do (nothing I can think of).

I have close to $1000 invested in this scanner. The radio sold for about $500; the Optoelectronics interface was $300; Probe 6 was $100. On top of that, I had to buy the parts to make the PROgramit and a power supply. I also had to pay technical pro to put it all together. I'm really finicky about my stuff, so I made sure to hire a guy who works only to the highest standards. He wasn't cheap, as you can guess. Still, I want that fancy telescope so I listed it with a reasonably low reserve. Please bid only if you're serious. If you have negative feedback, I'm sorry, but I cannot accept your bid.

I prefer payment by money order, but I will accept PayPal if you pay the 3% fee that PayPal will charge me. You pay shipping too. I estimate that it will be about $10. I'll let you know for sure once you tell me how you want me to send it to you.

Yeah well Nick, let's face it, during Desert Storm the Iraquis couldn't kill any of our guys, so they got a trigger-happy Yank to do it for them. Of course it wasn't the trigger happy Yank's (yet to apologise or be held accountable) fault, but likewise the Swiss cable-car downed by the show-off doing aerobatics, and many others in between. Even the "friendly" Afghans have to start running when they see the Yanks coming.

Let's face it, if you are not yourself American then you are a legitimate target, wether you be ally or enemy. But since the casualties of this US foreign policy are not themselves Americans, I don't suppose it matters much to your average US citizen.

The DJ-X3T and VR-120 are equipped with internal bar antennas
which afford significantly better AM BCB reception than
the IC-R2 and VR-500, though their AM BCB reception isn't
as good as some of my ordinary AM radios.

The DJ-X3T, VR-120, IC-R2, and VR-500
all scan in the 8 to 11 channel/sec range.

You can link up to 5 memory channel banks for scanning
and the DJ-X3T has 700 channels, an adavantage over
the IC-R2's 400 channels and inflexible bank scanning policy.

The Alinco DJ-X3 uses three AA batteries instead
of two as the other models do, so it is heavier
and a bit larger.

Its case is slim at the bottom, which is good
when carrying the radio in your shirt pocket but
difficult to keep it standing up in a vertical
position -- a design shortcoming. I don't have that
problem with the other 3 models.

The DJ-X3T I tested (S/N M000570) made a loud popping sound
when the squelch closed after each transmission, which
was very annoying.

Setting the volume and squelch on the IC-R2
is a chore, but it's even more challenging with the DJ-X3T.
The multipurpose knob must be pressed once,
then rotated for volume adjustment.
To set the squelch, you must push down on the knob twice, then twist.

For these reasons, I found the DJ-X3T less pleasant to use
than the other models we're discussing, though that's a matter
of personal taste.

some agencies are scrambling their signals... but on occasion you hear
them transmit in the clear.
The Border patrol and Customs do this. I can understand why.. they don't
want a "Coyote" or immigrant smuggler" using a scanne to help them play
cat and mouse with the border patrol.

most transmissions are still in analog mode.... Police are government
agencies and government on the average is slow to change anything.

Hi

I am looking for a Diamond RH-9 or RH-10 antenna new or secondhand ...
they're the small ones with bnc connection. I live in Australia and down
here it's very difficult to get anything.
If you have one and would like to part with it please email me at
NOSPAMnudy@optushome.com.au (remove NOSPAM)

Looking forward to hearing from someone.

Regards

Mike

A Euro 2042 with an OS-535 board is worth more than $300, but not the
$700 "Buy it Now" price. Bidding will probably end in the $400-$500
range.

I wish the VR-120 had CTCSS like the IC-R2.
Perhaps Yaesu will import their (Standard) VR-150 from
Japan, which has CTCSS, 1000 channels, and alpha labels.
It can compete head to head with ICOM's IC-R5 if ICOM sees
fit to import that in the USA, too.

It will be interesting to see what's left of the continuous
frequency coverage after ICOM and Yaesu alter their portables to conform
to the FCC's new 38 dB cellular rejection rules.

Sorry you had a bad experience with the VR-120.
I haven't observed intermod on the VR-120 to be any worse
than the IC-R2, but the IC-R2's CTCSS is great for letting the
radio scan past intermod and interference from nearby appliances.

Though I prefer to use a wide coverage receiver for scanning
land mobile and aero transmissions, I also use it occasionally
for listening to AM radio talk shows, news, and FM music when roaming.
My VR-120's AM and FM broadcast reception is superior to the both IC-R2s I've
used. The VR-120 benefits from its internal bar antenna on AM BCB.

On FM BCB, the IC-R2 is hamstrung by its wider WFM selectivity,
so I can't listen to weaker FM stations if there's a strong station
on a nearby frequency (e.g., 95.5 and 95.9 MHz)

Best guess: You scanner draws power faster than your charger provides it.
Leave it off and on the charger for a little while, and see if that makes a
difference...

Best info I can come up with based on the info given...

Heck, everyone knows that Canadian money is worthless.

But since you seem unable to do the math, figure this out: the scanner was $500 new; the Opto was $300 new; the PROgrammit was $20 in parts and $50 in labor. Probe software is $100. Add in the fact that all of the work was done by a pro tech, and it adds up to more than $1000. If you can buy a like-new scanner with these features and all of the acessories, packaging etc, for say, $500, then go for it.

This scanner is a Euro model, which means that it can pick up cellphone freqs if you're into this sort of thing. The OS-535 has been unlocked so it too will tune cell freqs.

Hi Alex, check this out - it is an exhaustive list for Warsaw, might need a dictionary - Straz Pozarna is Fire, Straz Miejski is city Guard. Basically they use around 146mhz.

http://www.giller.republika.pl/

I have an old PRO-43 in good working order, which I use to monitor auto races. I find it very tedious to re-program it for each race. Is there a way to program this with a PC running Probe or something similar?

Is there a one-source website with current freqs for all the major racing series & teams?

Yes but those were new prices, what makes it worth that much today?
Especially since you can buy BC 780XLT's for $275 used for $320...

Plus don't you think eBay is going to kill your auction since its cell
phone capabile. eBay's been doing a lot of that lately...

eBay may very well kill my auction, although I do not specifically mention that it will tune cell phone freqs.

Anyway, the auction is up and running. If no one bids on it, that will be my loss. What I don't understand is why there are guys here who have nothing better to do that try to queer my deal. If someone doesn't like the price, then this is not the scanner for him. That's what capitalism is all about, so why all the fuss about what I want to do with MY scanner?

Why would I buy from a person that is swearing at everyone and running them down. Yay. Euro Model. Woo hoo. I got a euro Bandplan. I guess since you are saying I am too stupid to do math. Hmm. You Must be stupid too. Most canadian scanners are STILL unblocked. That means WE have the US bandplan. Full Spectrum of the frequencies Listed. INCLUDING cells. There is NO law saying we cannot listen to cells. Yaesu is about the only one besides Uniden that blocks out the frequencies. ICOM and others are fully unblocked. They even call it a Canadian/AU model. I am saying I can get a nice pcr-100 for 369 canadian. Fully unblocked. No mods needed. Damn if all these people knew that they don't have to pay lots to get cell. I think you need some viagra or something. Maybe you are just a cranky old man.

Stupid answer!(err, Best guess)

Questions.

* Does the scanner work with no batteries and the charger plugged in?
* Does the scanner work with regular (non-rechargeable) batteries?

If the answer to either question is YES, then the rechargeable batteries
mat be bad.

If the answer to either question is NO, then the scanner or the charger
may be bad.

Get-a-life Bud whined and blathered about things of no consequence to which his betters replied:

You obviously have no idea what you're talking about. I'm sure that Mackey would agree since he's been slapping you upside the head in this forum for years now. Everyyone knows that you don't know squat about scanners. All you can manage is to start trouble with people here.

hmm. I guess it is time to complain to ebay. I will give them the newsgroup posting stating that you lied. Letting them know it is a euro model and not a US model. etc. Or. I may not do anything. I feel sorry for the fool that buys from someone that is so rude like you. Even if I did decide to buy or bid on it. I would not now. I never called you stupid till the previous post. This was after you called canadians stupid. If we are so stupid. Why do we have the true free speech on what we want to listen to. I love americans, but I dislike rude people like you.

1960. WTB: IC-R10 schematic or Svc Manual

Newsgroup: rec.radio.scanner
Date: 2002-08-23 22:24:31 UTC
From: David <ddlee@houston.rr.com>

Looking to buy a schematic or service manual so I can fix my broken Icom
IC-R10 scanner.
Hoping to find a more cost-reasonable alternative to the $44 price that Icom
charges for a service manual.
I really wanted to avoid sending it in for repair @$75/hr.
TIA

Someone might say that another is being critical of a 'price' because he is trying to help out someone who doesn't know any better. But if I were going to buy something used for several hundred dollars I would do a search on ebay to see what similar items had SOLD for and put very little merit on what someone thought that it was worth. Being critical of someones price is a way of saying, "I know more about it's value than you do." From my view point I wouldn't pay more than $10 for a scanner, unless of course I were to resell it; because I have three scanners in use most of the time and they've all been modified by me to various degrees. But on the other hand if I had NO SCANNER and was not into modifying radios then I would be willing to pay much more than $10 for a scanner that had been modified.

I haven't worked in three years -:) and I still don't have the time to be the 'price police' for anything. How many of us go to a thrift store and tell the manager that his is charging to much for his 'used merchandise'. Normally we just go on our way and say nothing.

Why am I a blithering idiot?Because I have a Pro 2042 for sale at a much
cheaper price??Or because I made a mistake and corrected it?
No ,I think you are the blithering idiot for making such remarks to people
who have the right to voice there opinion on your price.You don't have to
use vulgar language or be such an A--hole that you must be.Now you proved a
point to all of us on this ng.As far as I am concerned,I would not give you
$2.25 for the whole works for fear of getting a hot item..
Mine is in mint to new in the box for much less than your starting price.Oh
well,theres one in every bunch.Have a nice life!

Does anyone know the dB loss per 100' at 100 MHz of Radio Shack RG-8/U?
Just had someone give me two 50' sections and was wondering how it
does in the MilAir range (225-400 MHz) compared to RF-9913 which is what
I've been using.....

Geez Louise, what is with you people! I was not responding to you at all. Go back and read what I posted and to whom before you start jumping all over me. While you're at it, practice what you preach. In fact, I think your price is in line with mine without the extras thrown in.

Even the best quality RG-8 is lossier than RF-9913 in good shape. RS
RG-8 is probably a little worse than "best quality" RG-8.

Look up a table of coax loss at the sites of any of a number of antenna
or cable suppliers.

You'll find most of us on the "ScanColo" reflector. Check out
www.scancolorado.com and www.wyattphoto.com. I believe the former site has
instructions on joining the reflector. Both sites have a number of links to
other Colorado scanning sites.

It will lose about 5 times as much signal at that length as the 9913 will.

The splice, if a coupler, won't help either.

Sorry, 47 USC 332 (Communications Act of 1934) provides for unrestricted monitoring

of public broadcasts. Police, fire, public safety systems having been declared by the U.S. Supreme Court to be "broadcasts" as defined by 47 USC 153 (6).

Monitors may only be prohibited under 47 USC 302 (a), and then only under circumstances
where it can be shown that the monitoring would "interfere" with police operations.

302(a) is the section used by some states to prohibit scanners on motor vehicles.

302(a) does not in any way effect the right to monitors and scanners in the home, office,
newsroom, or any area except motor vehicles.

HI

John bandplans are useful,but to get a better idea of who uses what and how busy certain allocations are to others,then look at proper freq lists.

spectrum allocations often show certain bands to be underused when in fact they are very heavily used.

take 429-440 mhz most people just dismiss it as ham,but in fact it is primary MOD band and is now getting very busy with army barracks/mod police/us mil coms etc.

to look at spectrum lists it still shows it as a pretty uninteresting band,look at freq lists such as PROMA and you will see how busy it is.

also you will get a better idea of all the various split frequencies.

regards

There's no interface built in.

Nothing is impossible, though. Take a look at "Programmit":

http://www.qsl.net/ka2pyj/

>Is there a one-source website with current freqs for all the major racing
>series & teams?

http://www.racescanners.com/

It's a commercial site, at $18 per year.

There are a lot of free sites, but the quality of data varies. I have
pissed away a lot of time scrounging for free frequencies on line.
Next season I am definitely shelling out $18.

As long as I'm recommending spending money :-) , you might look into
getting a computer programmable scanner.

RS's current race scanner (PRO-89, I think) periodically goes on sale
for $130, and the interface kit (cable and software) is only $15.

The PRO-64 was RS's first computer programmable scanner, and can be
bought used for under $100. I paid $60 for one from a FS post on this
NG. The cable can be built for a few dollars, and excellent software
is available for free. Check the software page at strongsignals.net
for current links to 64 software.

I currently use a PRO-92 at races. Progammable (definitely worth
it!), has text tags (which are GREAT) but the thing weighs a ton.

Do you know where I may find specs on the R5?
Did a little search on Google, didn't come up with anything. Even checked the Icom America site.

Thank you.

HELP-
I am trying to find out the proper polarity and voltages to the four pins of the power connector on the back panel of an Electra Bearcat model BC - II 2.

This is an 8 channel, crystal controlled unit with the Round speaker on the right side of the front panel.

the pins are arranged in the following pattern:

- |

The Sams servicing book for the BC-III shows the same connector.

```
4 3
- |
- |
2 1
```

To run from AC connect a line cord to pins 2 and 4. To run from 12 volts DC short pins 1 and 3 and then connect +12V to pin 2. Ground goes to the chassis. I don't have one of these radios and have not tried this. I'd recommend trying the 12V connection first since there is much less chance of frying something. Do NOT try AC power with pins 1 and 3 shorted!

If you want to open the radio up and look at the wiring, pin 2 should go to the power switch, pin 4 to the power transformer, pin 1 to the other terminal of the power switch, and pin 3 to the main board 12V connection. It would be worth checking this before applying power.

My Pro 43 can be pc programmable. Modded to work with the hb232 interface for programming of memory only, no pc control. There is next to no support for the hb232 anymore.

Search for Programmit, should be adaptable for the pro43 if you can locate the parts.

Ted

Amateur Radio Newsline™ Report 1305 August 16th, 2002

Amateur Radio Newsline report number 1305 with a release date of Friday, August 16th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Japan says no to putting communications over power lines and the NCVEC says YES to remote testing. These stories are first on amateur Radio Newsline report number 1305 coming your way right now!

(Billboard Cart Here)

**

SPECTRUM NEEDS: NO PLACE FOR PLT IN JAPAN

Proponents of using Power Line Transmission or PLT technology have suffered a major setback. Telecommunications regulators in Japan have said NO to its implementation after tests show that the system could interfere with other spectrum users including ham radio. Jeramy Boot, G4NJH, has more:

--

The RSGB has learned from its contacts in Japan who have been working on problems of interference from Powerline Telecommunications Systems that, following extensive trials, the Ministry of Public Management, Home Affairs, Posts and Telecommunications has decided not to permit the roll-out of PLT systems operating in the range 2 to 30MHz in Japan. Japanese studies have shown that emissions from PLT are harmful to HF communications and all requests from PLT manufacturers to operate PLT systems have been refused. The RSGB has been told that the Japanese amateur society, JARL, has been actively working with the government, along with radio astronomers, broadcasters and others, to assess the impact of PLT systems on the radio spectrum. We understand that this decision has been given much publicity in the Japanese national press, which has highlighted concerns about interference to safety-of-life services.

--

What about Power Line Transmission systems being proposed elsewhere in the world? G4NJH says that in Europe, the Radio Society of Great Britain continues to press for tight limits on emissions from all wireline based telecommunications systems. Also that it is working with other High Frequency users to try to ensure that the spectrum remains uncontaminated by wideband noise. (GB2RS)

**

THE VE TESTING SYSTEM: NCVEC SAYS YES TO REMOTE TESTING

The National Conference of Volunteer Examiner Coordinators have endorsed experimental use of videoconferencing technology to conduct Amateur Radio testing in remote areas of Alaska. Newsline's Bruce Tennant, K6PZW reports:

--

An ARRL bulletin says that it all happened when the nations VEC's gathered with the FCC to discuss the all volunteer testing system and ways to inprove it. Meeting July 26th in Gettysburg, Pennsylvania, the National Conference of Volunteer Examiner Coordinators or NCVEC voted to back a one-year trial run to be conducted by the Anchorage Volunteer Examiner Coordinator in Alaska.

Jim Wiley, KL7CC, of the Anchorage group told his VEC colleagues that it's very expensive to provide Amateur Radio test sessions to the thousands of Alaska residents who live in remote areas. The vote followed discussion on whether having a VE team remotely monitor a test session while an unlicensed individual proctored the exams on site would comply with FCC Part 97 rules.

Section 97.509(c) of these rules says that three VE's must be present and observing the examinees during a test session. But Bill Cross, W3TN, of the FCC's Wireless Telecommunications Bureau, pointed out that the VEC and the VE's are responsible for the proper conduct of the exams. He also said that no rule changes appeared necessary because VEC's already have authority to determine the manner in which their VE teams conduct examination sessions. So the test of videoconferencing ham radio tests will go forward.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

The Anchorage VEC says that it will provide progress reports to the NCVEC on the videoconferencing experiment. (ARRL)

**

ENFORCEMENT: THOSE REPEATER WARS

Repeater wars continue among hams on both the east and west coasts. And the CQ Magazine website says that those involved are dragging the FCC into battles the agency would really rather the ham community settle on its own.

Two examples. In West Virginia, where an uncoordinated repeater was interfering with a coordinated repeater in Virginia, the FCC ordered the owners of the uncoordinated repeater last winter to resolve the problems. However, it appears that interference is continuing and the FCC is again looking to the owners of the West Virginia repeater to investigate and resolve the complaints.

In California, a strange one. Last March the FCC found no enforcement issues involving a repeater in Sonoma County following complaints from another repeater group. Now, users of the Sonoma repeater are complaining of interference from the repeater whose trustee originally complained to the Commission about their repeater. (CQ)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9SEH repeater serving Champaign Illinois.

(5 sec pause here)

**

ENFORCEMENT: FAX BROADCASTER FINED $5.4 MILLION FOR JUNK FAXES

The Federal Communications Commission issued a record fine of over five million dollars against a company for sending junk faxes to businesses and consumers. Amateur Radio Newsline's David Black, KB4KCH, at our South-East Bureau has the details.

--
The August 7th fine against fax.com of Aliso Viejo, California is the largest ever by the commission for violations of the Telephone Consumer Protection Act. It is also the first against a company known as a fax broadcaster.

According to an FCC release, fax.com was paid to send unsolicited advertisements and other messages on behalf of more than 100 businesses. And FCC Commissioner Kathleen Q. Abernathy says that despite repeated warnings from the commission and numerous consumer complaints, fax.com appears to have made no effort to mend its ways.

Commissioner Abernathy added that the company appears to have founded its business on the practice of sending unsolicited faxes in flagrant violation of that law. This has resulted in the fax.com being cited for close to 500 violations at about $11,000 per violation. Thats the maximum penalty and it adds up to $5.4 million due to Uncle Sam.

But a lawyer representing fax.com has another opinion. Attorney Mary Ann Wymore says that the company feels the rules on unsolicited advertising are an unconstitutional restriction of her clients freedom of speech. And Wymore indicates that fax.com is going to challenge it in the federal courts.

For the Amateur Radio Newsline, I',m David Black KB4KCH.

--

fax.com has been given only the customary 30 days to pay the fine or file an appeal. The FCC is also issuing citations to more than 100 businesses that used the services provided by fax.com. (Adapted from FCC release and published news reports)

**

ENFORCEMENT: DONT ADVERTISE BANNED GEAR ON THE WWW

The CQ website reports some unofficial advice from the FCC: If you're going to sell non FCC approved amateur and CB equipment, don't advertise it on the World Wide Web!

Case in point. A company in Wisconsin we have reported on before. Roper Electronics which was asked by the Commission back on June 18th to explain why it was alleged web advertising non-certified CB transceivers and HF linear amplifiers on its website. The company was also ordered to submit a list of all High Frequency transceivers and amplifiers sold within the US or offered for sale during 2002, along with the FCC certification number for each model.

The FCC's Riley Hollingsworth says that his office has received a answer to the inquiry from Randi Owen. Owen is the owner of Roper Electronics. Hollingsworth says that his office and the local FCC field office is reviewing Owen's reply. (CQ)

**

RADIO LAW: DIGITAL TUNERS TO BE REQUIRED FOR ALMOST ALL TV SETS

The FCC has decreed that nearly all television receivers made after July of 2007 must include the ability to receive and display digital transmissions. Digital tuners in some of the larger sets will be required by July 1, 2004. All new sets of 13" and larger must have digital receiving capability by July 1, 2007.

TV set manufacturers are opposed to the new law. They say that it will add at least $250 to the price of every receiver sold. Also, that there is not enough digital programming to watch.

The FCC has another view. It is convinced that forcing the public to buy sets equipped with digital tuners will help speed up the conversion to an all digital t-v broadcast system.

You can read the full details on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225221A1.doc (From FCC release)

**

PRESERVING THE PAST: HAM RADIO COMING TO THE USS HORNET

Tom Hale, KB6SSN, tells the Amateur Radio Newsline that the staff of the USS Hornet Museum in Alameda, California has agreed to a ham radio project. The managers of the Hornet will allow a group of Amateur Radio operators rebuild and restore the original radio systems aboard the ship.

This will be a multi-year project three phase plan that includes getting modern commercial ham gear up and running aboard the Hornet as soon as possible. The planners are looking to contact anyone who served aboard the USS Hornet. If you did or if you know someone who did please have them contact Tom Hale KB6SSN by e-mail to tom@halemail.com. (KB6SSN)

**

WITH THE HANDI HAMS: SUMMER RADIO CAMP IS FULL

The Handi Hams report that their Summer 2002 Minnesota Radio Camp session is full but the group will hold its Winter camp in Malibu, California from March 2 through 9, 2003. Those interested in attending the 2003 outing are requested

to e-mail hamradio@courage.org to request an application. Applications will be mailed out as soon as they are printed and available. (Handi Hams)

**

HAM RADIO IN THE MEDIA: MORE DONATIONS TO “THE HUMAN RACE”

Kenwood Corporation will be the supplier of hand held radios for the t-v show The Human Race. And the shows producer, Bill Desjardins, W1ZY, says that he is happy to have Kenwood on board:

--
W1ZY: “We are certainly thankful to Paul Middleton over at Kenwood for giving the go-ahead on this and we look forward to a close working relationship with Kenwood.”
--

Desjardins tells Amateur Radio Newsline that there was a specific reason that Kenwood was selected.

--
W1ZY: “We are going to go with Kenwood’s in the field. The racers and the production crews will be using D-7’s during the actual race. Now other companies make good radio’s and we looked at all of them. But Kenwood won out because it packs APRS tracking into a really rugged field package.”
--

Desjardins also says that another important item has just materialized. He says that VE7FM has donated a home-brew, handheld, two-band beam to The Human Race for use with the D-7 and VC-H1 recently supplied by Kenwood to track satellites and pursue I-S-S contacts. Desjardins adds that this particular donation brings more good karma to the project. (W1ZY)

More information on the TV show “The Human Race” is on the web at www.humanrace.fr.st.

**

HAM RADIO IN THE MEDIA: FREQUENCY -THE TV SHOW

New Line Cinema is considering spinning off the movie "Frequency" into a TV Series. “Frequency” is the film where the non-ham hero uses his dad’s old ham radio equipment to communicate with his now decease father.

The movie was a great public relations boon for Amateur Radio. If New Line Cinema proceeds, a t-v show could help put the words ‘ham radio’ in the mind of every man, woman and child in the U-S of A. (Via W6AQ from published reports)

**

NEW PRODUCTS: A MANUAL YOU CAN CARRY

Jovan Peric, KB9K, says that he is now producing fully laminated mini manuals for a number of the most popular Icom, Kenwood and Yaesu transceivers. For more

information and photos visit www.radioamater.com/kb9k on the world wide web. You can also write to Peric at 3425 West Ardmore Avenue, Chicago, IL 60659. (KB9K)

**

CONVENTIONS AND HAMFESTS: DUKE CITY HAMFEST

The 2002 Duke City Hamfest will take place Friday, August 23 through Saturday, August 24th at a the University of New Mexico Continuing Education Conference Center in Albuquerque Hew Mexico. Hours are 5:00 p.m. -to 9:00 p.m. on Friday and 7:00 am to 3:00 p.m. on Saturday. More information is in cyberspace at www.qsl.net/dchf (N5ZGT)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

CHANGING OF THE GUARD: ERNIE HUDSON KI8O - S.K.

The ham who headed up the Montgomery Ohio ARES operation has died. Ernest Hudson, KI8O, passed away on August 2nd following a long battle with Cancer.

Hudson was 69 and had served as Emergency Coordinator for Montgomery County for over 20 Years. His organization with over 530 ARES members was one of the best in the nation. Hudson was also on the State of Ohio Council of Amateur Radio for the Montgomery - Greene County Local Emergency Response Council. And in 2001, KI8O was named as recipient of the Dayton Amateur Radio Association’s Distinguished Service Award.

Funeral services for Hudson were held on Tuesday August 6,2002 at the Parkview Church of the Nazarene, in Kettering, Ohio. (W8ILC)

**

RADIO BUSINESS: NEW MILITARY COMM SYSTEM BEING DEVELOPED

The Boeing Co. has been named prime contractor for a new U.S. Army communication system. The Joint Tactical Radio System is expected to be the foundation for all future Department of Defense tactical radios. (Published news report)

**

HAM RADIO IN SPACE: N SYNC WITH THE ISS

Russia's space agency says that it might scrap plans for 'N Sync singer Lance Bass to join an October mission to the International Space Station. This is because the Russian’s say that he had failed to meet a payment deadline.

Bass, who is backed by a consortium of companies rounded up by a Hollywood producer, David Krieff, has signed a preliminary contract for the trip. But Bass, who is already training at Star City Cosmonaut Center near Moscow has yet to secure a final deal guaranteeing a seat aboard the Soyuz craft.

If he does go, don't hold your breath waiting for him to turn up on 2 meter FM. He will be doing a lot of commercial endorsement work. In fact, Bass's space suit will be emblazoned with the names of sponsors. These logos will be seen during the eight TV shows Bass expects to beam down from space. Bass is also expected to record audio tracks for a future 'N SYNC release. (Published news reports)

**

HAM RADIO IN SPACE: THE AMSAT GLOBAL SATELLITE NET

Internet technology is allowing worldwide access to a new AMSAT net for beginning satellite operators. The AMSAT Global Satellite Net was recently started by Neil Hays, W6FOG, and may be accessed on VHF or UHF through repeaters linked via the Internet using the IRLP Internet Radio Linking Project network.

For those without IRLP access, but with HF equipment, the net may also be found on 14.250 MHz on 20 meters, every Wednesday between 0200 and 0330 UTC. I-R-L-P access is via radio only, but activity may be monitored by anyone with a computer, sound card and Internet connection. For more information on I-R-L-P, go to www.irlp net. For details on the AMSAT Global Satellite Net, see www.w6fog.net (W6FOG, AMSAT)

**

RADIO IN SPACE: SATELLITE RADIO VS. WIRELESS

XM Satellite Radio Holdings and Sirius Satellite Radio are reportedly in talks with wireless companies to resolve a dispute over interference with wireless communications services. The two sides have been bickering over the satellite services using equipment to extend their digital radio signals to hard-to-reach areas like metropolitan areas where skyscrapers can block satellite beams. Wireless companies fear that these translators will interfere with some wireless communications services. (Published reports)

**

DX

In DX F6FYD and F2VX are in Baku, Azerbaijan, until the 23rd of August. F6FYD will operate as 4J0FR- while F2VX will use the club call 4K7W. They will be active on all bands CW and SSB. (GB2RS)

And SM0CMH is active on 10 to 80 meters, including the WARC bands, on CW as SV5/SM8C from Kalymnos Island. He will be there until the 30th of August. For both these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: WATCHING TV OVER THE MOON

And finally this week, here is one of those rare stories where an individual has done something so outrageous as to earn a spot in the record books. It happened down-under as we hear from Q-News Graham Kemp, VK4BB:

--
Dr. Anthony Mann of the Physics department at the Western Australian University has created a "Receiving system" which allows him to tune in Television signals from the US.

Tony has been a DX, TV enthusiast for decades, using his scientific credentials to stretch the laws of physical limits in order to "See further and further, unaided by satellites or wire".
His latest accomplishment, apparently a first, is to work out the parameters for using the Moon as a satellite reflector for bouncing TV signals from the USA into VK6.

As regards Tony's gear, he uses an Icom R7000 receiver, a Jaycar 91 element UHF antenna fitted with GaAs-Fet 20db masthead amplifier.

So far there's nothing very special about that except that the antenna is mounted on a tripod 1.5 meters above ground with the ability to adjust both azimuth and elevation to track the Moon in his sky.

Fortunately a Moon setting in Oklahoma is well above the horizon in Perth WA.

The signal Tony receives is tiny, very tiny, and not enough to produce a picture he can watch or even sound he can listen to. At this stage, it's not about watching Buggs bunny cartoons, it's all a bit more scientific than that.

Knowing the transmitters frequency to within a few Hertz, yes that's right Hertz, is essential as what Tony is searching for is a "beat note" indication that a carrier signal is present on the Icom receiver.

By using web amateur "Moon bounce" web sites he was able to calculate the Doppler shift for a group of likely TV stations, and then got hold of a precise TV station's transmitting frequency down to the last two Hertz; ie: 501.248XXX, the X's being the Doppler shift migrated.

Results this year have included signals originating in Oklahoma and Indiana.

--

You can read more about Dr. Tony Mann’s television reception experiments at the cyberspace address that you will find in this at www.physics.uwa.edu.au/~agm/eme1.jp

First of all, you need to find out if that system is an analog or digital trunked system. If its analog, you should be able to track it with the 780. If its digital, you will be out of luck until the Uniden digital trunk trackers come out later this year.

You did mention voice transmissions, so theres a chance that system is analog. You would not hear anything but noise, if it were digital.

Everyone I know who's had the opportunity to test Radio Shack coax with
a time-domain reflectometer has recommended strongly against buying RS
coax.

And just for grins, if you can, check the power output of the charger. Most (all?) of the wall warts are class 2, which means they have small fusible wire that burns in two when there is a problem, like getting a little too warm when overcharging the batteries. A friend of mine had a very similar problem with his SC-150, and it turned out the wall wart had burned out.

The constitution guarantees the "right" to receive broadcasts. It does not guarantee that you will HAVE the equipment to receive.

The "test case" that has NOT occurred yet, is the right of the public to purchase
the necessary equipment from suppliers to receive encrypted communications.

Anyone know what this is? I picked one up at the flea market today for $15 in XLNT condition. Looks pretty cool with it's direction finder on top. Just wondering if it was any good for some BCB DX'ing, or whatnot. For bands it has:
BECN (beacons?) .15-.4 mhz
AM .54-1.6 mhz
CB 26.8- 27.8 mhz
VHF 145-174 mhz
FM 88-108
Quite an impressive looking unit. Got to find a plug for it to test it out.

I remember when the sheriff's department of the county (Harris)
surrounding the 4th largest city in the US (Houston, TX) went to 800
trunking, back when the scanners for that were rare and expensive. Guess
what... None of the wreckers could find the wrecks to clear accidents..
and the officers resorted to announcing wrecker calls on "legacy"
backchannels.. Same thing happened when they thought it would be cool to
switch on systemwide encryption.. it actually disrupts the system.

Rest assured, the special ops guys for the county and any subcontracting
police users can and DO encrypt for their operations, but that is
tactical necessity, as well as for PR (anybody from Houston remember the
OUT OF CONTEXT comment over 15 years ago where the media has SWAT saying
"..let the man die.." a few minutes before a sniper terminated a standoff)

2016. Brand new User Questions On Aviation Frequencies ?

Newsgroup: rec.radio.scanner
Date: 2002-08-25 11:40:33 UTC
From: Robert Rose <rgsrose@tiac.net>
Message-ID: <akafmvsob1@slb1.atl.mindspring.net>
Source record: 44456

Hello:

New user here.
Have a few pretty basic questions, please:

I have installed the Radio Shack Discone in my attic (I do receive only).
-Anybody else using this one? Thoughts on?

Live about 25 miles due W. of boston, and am enjoying picking up the
aviation bands from Logan and Hanscom.

a. should these be coming in better at night or during the day ?

b. what might be a reasonable range to expect to be able to listen to?
Being AM, I guess the line of sight
implications that are inherent in fm do not apply. e.g., should iI expect
to pick up New York and/or Gander?

c. what are some of the international flight frequencies that I might be
able to pick up for flights coming into Logan,
and possibly Gander and N.Y.C. ?

d. what are some "good" frequencies for Gander?

e. Any really interesting aviation stuff that I am not thinking of, that
anyone might care to suggest? Would be most appreciative.

f. Any "tricks-of-the-trade" kind of hints in setting up one's receiver
(have a JRC NRD 545 with the Converter),
or listening in general, on the aviation and marine bands?

Much thanks,
Bob

2020. Two VHF-FM w/CTSS (Multi-Use Radio Service)Radios for swap:

Newsgroup: rec.radio.scanner
Date: 2002-08-25 14:19:30 UTC
From: rugerp85 <rugerp85>
Message-ID: <lqphmuod9mno6aokpp9p7ts1ikpelsp2bq@4ax.com>
Source record: 44460

Two VHF-FM w/CTSS (Multi-Use Radio Service)Radios for swap:

I have TWO of these in MINT Condition,comes with the power
cords.mics,and a manual.

Looking to trade for a nice scanner or 10-meter rig HR2510/2600,Galaxy
DX-99,DX-88, etc.

VHF business 2-way radio has 38-tone CTCSS to cut interference from
others using the same frequency in your area. It comes pre-programmed
with 9 user-settable VHF business frequencies and can be programmed by
a RadioShack Service Center to nearly any VHF business frequency from
150.775 to 157.740MHz.

Product Features:

You can select 2-watt power for maximum range or 600mW power to
conserve the battery.
Has jacks for adding earphone or speaker/microphone and an alternate
antenna.
Size: 5ï¿½1/2x2ï¿½3/8x19/16 ".

For business users of VHF Business Band radios, the FCC has created
the MURS (Multi-Use Radio Service) for use with the following five
frequencies:

Operate license-free on the following frequencies:

151.820 MHz
151.880 MHz
151.940 MHz
154.570 MHz
154.600 MHz

FCC license required for the following frequencies:

151.625 MHz
151.700 MHz
151.760 MHz

Power is automatically reduced to 1 watt on channels specified by FCC.
Can be set by user to any two of these VHF color dot business
frequencies: 151.625, 151.700, 151.760, 151.820, 151.880, 151.940,
151.955, 154.570 or 154.600MHz.

Police/fire frequencies require a letter of authorization on the
letterhead from appropriate chief of police or fire department.

Set to 1 of 9 "color dot" frequencies or can be set by RadioShack
Service Center to almost any business frequency that you have a
license to use.

> -Anybody else using this one? Thoughts on?

It's an OK antenna at best, almost anything will work a little better. A
2 meter ham antenna will kill your discone. I'm talking like an amazing
amount of difference. Even a home made ground plane will blow the
discone away.

>
> Live about 25 miles due W. of boston, and am enjoying picking up the
> aviation bands from Logan and Hanscom.
>
> a. should these be coming in better at night or during the day ?

Shouldn't matter, it's not like SW.
>
> b. what might be a reasonable range to expect to be able to listen to?
> Being AM, I guess the line of sight
> implications that are inherent in fm do not apply. e.g., should iI expect
> to pick up New York and/or Gander?

You won't pick up ground transmissions very far away at all, for instance
I can barely hear the tower at my local airport, about 20 miles a way.
Planes however can be heard A LONG way. The line of sight thing has
NOTHING to do with mode, it's due to frequency!
>
> c. what are some of the international flight frequencies that I might be
> able to pick up for flights coming into Logan,
> and possibly Gander and N.Y.C. ?

Check the SW utility pages, you can hear both sides as they come in, but
once they switch to Air band, you will only be able to hear the plane.
>
> d. what are some "good" frequencies for Gander?

Do a search.

>
> e. Any really interesting aviation stuff that I am not thinking of, that

> anyone might care to suggest? Would be most appreciative.

Well, to me it's realllly dull, but when there is an emergency, it's
pretty decent to listen to. The Coast Guard SW freqs are pretty
interesting, 5696 USB is always a good bet.
>
> f. Any "tricks-of-the-trade" kind of hints in setting up one's receiver
> (have a JRC NRD 545 with the Converter),
> or listening in general, on the aviation and marine bands?

Well, to be honest, a 545 and convertor is not really a very good setup
for this type of listening. It doesn't scan fast enough, so you will
miss a lot of transmissions, and that aint no fun. A decent desktop
scanner will do a MUCH better job on just about everything over 30 MHZ.
Something like a Bearcat 780 will do a great job, and also trunk track
local police stuff (much more entertaining, IMO)

tk500 version 0.8 is now available for free download.

tk500 is an open source programming utility for the
Yaesu VR-500 portable receiver.

Improvements in version 0.8 include new controls
for VFO frequency, VFO mode, VFO tuning step, Fast tuning
step, Smart Search Continue, and Set Menu Item menu.
The VFO settings have been organized into a new, separate window.

Memory channel import from a .csv file now tolerates lines with
missing trailing fields (i.e., too few commas). I fixed two
minor bugs.

tk500 has a graphical user interface and runs on Linux
and Windows. I'm still looking for MacOS X beta testers
familiar with Tcl/Tk.

You can learn about and download a beta test version of tk500
from my home page:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to Paul Martin, N8ULS for providing experimental data and
to Dan Wanchic, WA8VZQ for posting detailed
information about the RDF file layout.

2025. To BDK: Re: Brand new User Questions On Aviation Frequencies ?

Newsgroup: rec.radio.scanner
Date: 2002-08-25 17:55:36 UTC
From: Robert Rose <rgsrose@tiac.net>
Message-ID: <akb5m1$es6$1@slb1.atl.mindspring.net>
Source record: 44465

Hi,

Much thanks for your thoughts and help; really appreciate it.

Am really new at this:

What do you mean by a: "home made ground plane will blow the discone away"

What is this; how used? I listen pretty much up and down all freq's.
Would this be for just a single band?
How is it constructed?

Would it help to pick up the airport tower(s)?

Thanks,

Bob

all depends. If you know more then one company uses the same frequency. Yes you should get CTCSS. If you want to hear only one of the companies. if you want to hearll the companies on that frequency, then no youdon't need ctcss. If you have lots of RFI and you know the company you are listening to uses ctcss then you should get a radio with CTCSS. All ctcss does is squelches your adio and will not unsquelch unless it hears the sub auidable tone. Sounds like a low hummm. But lets say you have CTCSS turned on. You live on the fringe area of town where you get a transmission at about a s3 - s5. They used a tone. If you r radio cannot decode the tone. You won't hear the transmission. Now if you left the radio's CTCSS tone off. You would of heard that transmission fine. Any company that uses CTCSS canbe heard with the option shut off too. CTCSS is PL too. so if you hear someone say they want PL tones. They wan CTCSS tones usually.

why not just build a basic antenna for that specific frequency range. A antenna will work best being the proper length for that frequency. 1/4 waves are easy to build. the most basic rx antenna could work better. discones try to match a wide range of frequencies.

2030. AOR AR1000XLT for sale

Newsgroup: rec.radio.scanner
Date: 2002-08-25 20:51:33 UTC
From: dholloway <dholloway@futura.net>
Message-ID: <qrba9.811$vp2.355026@newsfeed.slurp.net>
Source record: 44470

This radio works but has a problem which I haven't the know-how to repair. It sometimes begins making what can best be described as a "squealing" sound. It stops when you pick it up and give it a slight squeeze. I don't know why but it doesn't seem to do this when earphones or an external speaker are connected.
For more technical information about this 1000 channel radio, go here http://strongsignals.net/access/content/rr_ar1000.html
Any questions, feel free to ask. I'm looking for best offer, but of course reserve the right to refuse sale for whatever reason I deem necessary.
By the way, I don't have the original manual but have one I printed out from a website.
Doug

From: TiNy <w9zro@netscape.net>
Message-ID: <3D69616C.C9555D9C@netscape.net>
Source record: 44475

Hello All, I am looking for a basic handheld scanner with 800 Mhz
It does NOT have to have cellular or any of that stuff
I am willing to trade my Bearcat 210XW 20 channel base,Realistic
Pro35(exactally the same as a bearcat bc100xlt) and a Gre handheld
superamplifier for it.
The Bearcat 210XW is in great shape for its age the display is nice and
bright and BLUE! I have antenna and powercord for it
The PRO-35 is in AWESOME shape no wear on the keys or display NO LEAKING
OF THE LCD! I have the Antenna and batery charger with it also.
Now the Gre amplifier is RUFF VERY RUFF but it does work both with the 9
volt battery and the DC adapter
if you have anything for trade let me know. I will sell outright
everything for $65 Shipped to the US only via a US postal Money order or
bidpay
thanks for the bandwidth
Bryan W9ZRO
w9zro@netscape.net

Dig up a copy of the original Scanner Modification Handbook. I think you can do the 6400 channel modification on it. A simpler mod gives you 400 channels by clipping a diode I believe.

>Sorry, 47 USC 332 (Communications Act of 1934) provides for unrestricted monitoring
>of public broadcasts. Police, fire, public safety systems having been declared by
>the U.S. Supreme Court to be "broadcasts" as defined by 47 USC 153 (6).

I'm no Philadelphia lawyer, but I know with certainty that 47 USC 332
has no mention of monitoring activities whatsoever. The closest you
get is the preemption of local and state governments to regulate radio
common carriers in the manner they do wireline services. So, your
state's public utilities commission cannot negotiate a tariff with a
wireless common carrier.

You seem to be adamant (the adjective, not Stu Goddard the musician)
about public safety transmissions being "broadcasts," but 47 USC 153
(6) says this:

:(6) Broadcasting
: The term ''broadcasting'' means the dissemination of radio
: communications intended to be received by the public, directly or
: by the intermediary of relay stations.

The public safety communications systems I'm responsible for transmit
messages to employees and volunteers of the participating public
safety entities - NOT to the public. The public's ability to monitor
public safety radio traffic is INCIDENTAL, NOT INTENTIONAL.

In fact, public safety communications systems are specifically
PROHIBITED from broadcasting. Look at 47 CFR 90.415 (Part 90 governs
land mobile radio, within which most public safety systems reside). It
says:

:Sec. 90.415 Prohibited uses.
:
: Stations licensed under this part shall not:
: (a) Transmit program material of any kind for use in connection with
: broadcasting;

And, we don't. Citing 47 CFR 153 is invalid for public safety
applications.

>Monitors may only be prohibited under 47 USC 302 (a), and then only under
>circumstances
>where it can be shown that the monitoring would "interfere" with police operations.

47 USC 302 was repealed in 1936. As such, it can't have a subpart (a).

47 USC 302a is the enabling mechanism for 47 CFR 15 for radio
frequency devices that are intentional and unintentional RF emitters.
It also deals with restricting type acceptance for "linears" that can
be exploited by CB hobbyists, restrictions of importation of non type
accepted/ type approved equipment and the blocking of "cellular"
spectra and the prohibition of converting digital cellular to analog
audio (keep in mind that this DOES NOT mean that you cannot demodulate
and decode TIA-102/ Project 25 digital!). Again, I didn't see any
mention of police operations.

>302(a) is the section used by some states to prohibit scanners on motor vehicles.
>302(a) does not in any way effect the right to monitors and scanners in the home,
>office, newsroom, or any area except motor vehicles.

Perhaps because it's not relevant to anything other than local
oscillator emission of those devices.

You had better fire the lawyer who gave you this hermeneutic before
you get yourself in trouble actually believing it.

Steve

Dig up a copy of the original Scanner Modification Handbook. I think youcan do the 6400 channel modification on it. A simpler mod gives you 400channels by clipping a diode I believe.

A 1/4 wave ground plane made out of an old SO-239 (coax plug) and some
steel rod or even just some old coat hangers will beat the discone, and
beat it pretty badly.

>
> What is this; how used? I listen pretty much up and down all freq's.

It's about the simplest vertical antenna there is, do a search on ground
plane. I'm sure something will pop up. It's made for a single band, but
will do a good job most anywhere. no ONE antenna works all that great
everywhere. There are some variations on it, I have made a couple of
them, and they are kind of fragile but work really well, and the best
part is, it's hard to spend more than 10 bucks making one.

Check this out: http://www.northcountryradio.com/groundplane.htm

My "dream" set up for 30MHZ on up would be a metal CB or 10 meter antenna
for 30-55MHZ, then a metal 2 meter ham antenna, like a Cushcraft Ringo
Ranger for airband and up to 200MHZ or so, then a 440 ringo for UHF, and
one of the vertical 800 MHZ antennas for up there, all mounted on a 100ft
tower. I can dream, but 50 ft is about it, and I cant stick all those
antennas on one tower.

AS far as picking up the tower, height will help more than anything. No
matter what I do here, the tower is always kind of weak unless there is
some sort of band opening, and it might come in pretty decently. I can
almost always get the Detroit PD, about 60 miles away, better than I get
the local tower most of the time.

> to match a wide range of frequencies.
>
>

Yeah, but a scanner doesn't have a 50 ohm input over a very big range,
and I have found that scanner antennas that are on the big side work
better than ones cut to the exact frequency. And as you listen more and
more, you tend to start exploring outside of one particular band, and I
was thinking something that would work better than a discone over the
main scanning freqs.

If you live in the USA and you can't sell it in the USA on Ebay your probably not going to sell it anyways.
Typically only high volume sellers are willing to ship anywhere,though I know theres an option to include Canada only along with USA - a better risk,I suppose,than Mongolia or Hanoi.
It's really not worth the extra time and hassle to fill out one of those foreign shipment cards for the average seller.
And if theres a problem ,its that much more difficult to get it rectified if it was shipped outside the USA.
In addition,online pay services billpoint and paypal offer no sellers protection whatsoever for those who make sales to people using credit cards not issued in the USA and not residing in the USA.
You could order that scanner,pay though paypal,do a chargeback after you receive it claiming it was DOA,then he'd have to completely rely on your good faith to ship it back down here.

Not many are going to take a chance like that.

As far as the bid retracting,I don't know if you were joking but since you didn't meet the reserve that doesn't matter anyhow.
He could always cancel your bid.

I've seen some replies to your question(s) and - discones are made to cover a broad spectrum of freqs -they are like the jack of all trades and the master of none so sure if you set up an antenna for the aviation freq range it would receive much better but.....outside of those freqs it wouldn't be worth the wire its made out of.
I would leave the discone (actually if you want better range get a mast and mount it on your roof if thats possible) and then string up a wire for aviation freqs,then you can have the best of both worlds. with separate antennas,one optimized for aviation and the other for general scanning.

Other points : If I recall correctly there is a threaded hole in the top of the RS discone with nothing in it (there was in mine at least) . Find an old CB antenna or some such that will fit and screw it in - this will increase reception in the low bands - aviation wise there is occasionally interesting traffic there,especially military - not much civilian.

Use as high grade cable as you can.

For international flights you really need shortwave (USB)
I hear Gander all the time here around Detroit with nothing better than a 20 ft run of copper wire hooked into a Drake R-8. Hell I pick up gibraltar for that matter.
The maximum range that I can pick up ground stations as well as aircraft at my location with a RS discone mounted on a 20 foot mast on a 2 story house with a 50 foot run of Beldon 9913 with a pro 2006 is about 45 miles.

Time of day/weather ect. doesn't effect VHF all that much,unlike shortwave,so that shouldn't be much of a factor.

I am not real happy with mine either. Besides being overloaded by
strong signals nearby, the AM band 550 - 1700, is dead too. Using the
builtin wip antenna, I barely pick up the local AM radio station on
1390.

If I could sell it for $125, I would.

This is an optoelectronics cub frequency counter. It is in new condition. Includes rechargable battery, charger, antenna. It can be armed to lock on to a signal. Range from 1 Mhz to 2.8 Ghz.

More details are located on the optoelectonics web site http://www.optoelectronics.com/cub.htm

Working in mint condition. $95

I prefer paypal. Buyer to pay $4.00 for US priority mail.

2054. RadioShack Flier - Major BooBoo!

Newsgroup: rec.radio.scanner

Just got the latest RadioShack sales flier. Take a look at the picture
of the PRO-94 Scanner. Very interesting frequency in the display!
First the scanner can't tune above 1300MHz and what kind of spacing
would allow 1546.831 to be entered.....I guess RadioShack doesn't pay
attention to details.....

I wonder if anyone will call RadioShack and ask for the version which
tunes above 1300MHz?

George

2055. Antenna Suggestion For 120 MHz Aviation Band Suggestion ?

Newsgroup: rec.radio.scanner
Date: 2002-08-26 16:23:11 UTC
From: Robert Rose <rgsrose@tiac.net>
Message-ID: <akdkks$g4f$1@slb3.atl.mindspring.net>
Source record: 44495

Hi,

Have a new discone installed in my attic. Do receiving only.

Like to try pretty much everything from 30 Mhz up tothe receivers limit of about 1.5 GHz.

But, I enjoy the aviation bands, abound 120-130 Mhz (am mode) most.

Would this be considered a 2 m aerial ?

It's been suggested that the discone, being a broadband antenna, excels at nothing, and
that I would be much better off using an additional dedicated antenna for just the aviation band.

Anyone care to suggest one, that isn't too big (will be in my attic, or possibly a corner of my study) and not
too expensive?

How about if I said my range of interest was 120 - 155 MHz. Same aerial ?

Any Radio Shack unit fit the bill?

thanks,
Bob

I plugged the charger in and turned on the scanner, the display was visble again, but the scanner was stuck in priority bank scanning and there were no frequencies in any of the 100 channels. Is it possible that the charger went bad and in turn caused the scanner to reset?

hmm.try the batteries now. does it work with the batteries ? if not that may be why your banks were lost. a simple powersurge can reset banks :(I reilstalled my ctcss board in my radio. it reset all the banks. I have seen the stupidest things reset them. just be glad you didn't bake the diodes. you will know if you did. If you plug in the power supply to charge the batteries and the batteries don't charge. Diodes may be shot. but if you put in the batteries and the radio works, awsome. if you put onthe charger and the radio works. great. no wif everything was like it was before, except the channels. Maybe it has a protection circcuit.

2062. "No Ground Plane" Type Of Ground-Plane Antenna For 122 MHz ?

Newsgroup: rec.radio.scanner
Date: 2002-08-26 19:09:06 UTC
From: Robert Rose <rgsrose@tiac.net>
Message-ID: <akdvb6pvo1@slb1.atl.mindspring.net>
Source record: 44404

Hi,

Please see my post immediately a few below this one on antenna suggestions
for
the 120 MHz aviation bands.

Now have a discone in attic (receiving only) for 30 MHz to1.5 GHz.

Made a web search as suggested for ground plane antennas.
It also came up with the no-ground plane type.

Any thoughts on these "no ground plane" types, that apparently are popular
for mobile use?

Likely better than my discone?

Sure do like the idea of not having any radial arms. Would be able to put
it into a corner of my room.
Still, if it offers no potential advantage over my new discone,...

If "good," suggestion for the 122 MHz band? Radio Shack have any good
ones?

Thanks again,
Bob

2063. Uniden Repair Dept / BC780XLT busted

Hi, quick question,

I recently broke my bc780xlt by means of a fall... Anyway, to make a long story short, I tried to fix it and managed to really screw it up. Looks like I will need a new board and a squelch knob. I called the repair dept and they told me I could order a new board, but it will be blank??? She said I would have to resolder EVERY little piece that is on the board. Does this sound right? It seems like I could order a replacement board, but.... guess not. If I can't buy a replacement board, I guess I will be parting with it to whomever needs parts... Any advice?? Thanks

Twalt

Yesterday at a local Radio Shack store, I found out the their annual Catalog
is no more! Every thing will be checked via the computers or phone. Seems
they need to cut cost and the catalog was selected to be chopped.

A vertical folded dipole with a 300 to 75 Ohm balun works good for me.
You could trim a cheap FM broadcast antenna folded dipole.

Yeah the higher freq range you go the more you'll get signal degradation and
notice a difference in hookup wire.
Indeed a quality wire can make the difference between hearing a weak,staticy
signal vs. a clear one,especially with a run of say 25 ft or more.
It might be worth noting in this regard that an N connector is quite a bit
better than the standard BNC's,and should be used whenever possible.
Since there aren't many receivers that include this as standard,modification may
be necessary.
Might not be worth it to the average scannist's,but something to consider for
those trying to tweak the best possible reception.

Bob

I use the AOR ABF 125, an aircraft band filter on my Radio Shack Discone for listening to airband. This little filter goes inbetween the antenna and radio and does a great job of enhancing airband.
I primarily translate ACARS signals and my good reading ratio went way up after installing this filter.

Universal has it.

The only thing I could suggest is get in touch with these guys
http://www.iinc.com/ggcomm/repinfo.html

Very reputable outfit thats been around for ages.
worst case scenario you could sell to them for parts and....that blank board
sure sounds kind of funky. its hard to imagine the reason for such a policy.

Good luck
James

Has anyone used this antenna with a scanner on the AM broadcast band?

I'd like to liven up the receive on my AR3000A, which picks up darn near nothing with the supplied whip between 0.530 - 1.710 Mhz. Also any experiences with
it on SW bands.

Any useful comments appreciated.

Bryan

>

Why are you selling it??? If it's the best scanner anyone can own, why not
sell one of your other scanners?
And, $600 for a "USED" scanner. I don't care how much modding was done,
it's still used! I don't know if you really had some "highly trained"
person do the mods for you. For all I know your some Hack who screwed the
scanner up, and now wants to sump it on some poor soul.

It's just like in used cars. I could have a Honda Civic with $20,000 worth
of mods, but I'm only going to be able to sell it for what the original
Civic is worth. So asking for $100 over new retail on a "USED!" scanner is
crazy. The last 2042 on Ebay went for $193. And, another didn't even
sell.

Just think it's a bit high. I'm still a bit confused. You say you hardly
used it, but yet you state it's the best scanner to own??? Thsi makes no
sense to me. I just can't imagine selling my "best" scanner. I think I'd
sel a couple of my lesser scanners for a fancy telescope. That's similar
to what I did with my cell phones when I wanted to buy my new camera.
Instead of selling the best phone I had, I sold a couple of the lesser
phones, to make up the difference. Now, I still have my "best" phone, and
the camera.

Nope, don't get it.....

Well I reckon the law of averages would apply,and since we got you on population by quite a large margin there are naturally more buyers/sellers located here.

You probably would be better of buying local. The AR1000 is a great radio don't get me wrong (I've had a clone Fairmate HP-2000 for over 10 years and its still going strong) But I would be leery of buying one due to 1)Its age and 2)The non - existent customer support for AOR. For instance,if you needed a new key pad,which is frequently the case with all scanners,good luck trying to find one.

and its not just because of its age - I tried to get one a year or 2 after they first came out and couldn't.
Unless,of course,you can get a great deal on one which,offhand, I would say would be in the $75 to $140 range for a unit in great working order.
Then too I suppose its unrestricted coverage might make it a bit more sought after than the average handheld here in the USA.
I've never noticed one on Ebay so I don't know what their going for.

Reminds me of the wal-mart flyer last year, advertising FRS radios at
a full 500 watts of power. Now that's some serious power!

My, don't you have a limited imagination! Ever think that I might have more than one of these? I do, along with an Icom 8500 and an AOR5000 and two handhelds (Yupi and AOR).

In any case, if you don't like the price, then it's not the scanner for you. You hang out a used car lots and badger the salesguy about the asking prices? I doubt it. So why go out of your way to try to screw my sale over if you're not interested? Nothing better to do or did someone appoint you Price Patrolman Junior?

But their catalog is becoming less important with time. I don't know
what it's like in the US, but here in Canada there is very little
at Radio Shack that is labelled "Radio Shack". In the old days,
it was a store but they also sold items of their own, or at the very
least branded with their name. You needed the catalog to know about
those unique products. But once they stop selling Radio Shack items,
there is far less reason to have a catalog. If they are selling
a Sony (or whatever it is) wind-up radio, one can find out about
it elsewhere and Radio Shack is merely another retailer that sells
the thing.

If you post an ad with a totally silly description and asking price,
what do you expect? Sure some idiot on eBay might bid over your
reserve, but for the most part, the users of this group aren't that
dumb.

Those that don't remember history are doomed to repeat it.

Tandy Leather
Allied Radio
Radio Shack

All eliminated catalogs and lost business, all owned or acquired by Tandy.
The internet is neat, but it is really uncomfortable to read an internet
catalog on the crapper.

I make most of my buying decisions from printed catalogs.

Pro-Turbo still supports the CE/HB-232 and it will also program the
Pro-43 if it is modded to work with the interface.

Find th e3 books the Bill Cheek wrote and you will have more info than you can shake a stick at its quite easy to add and extra 100 channel to that 300 channel scanner by clipping a diode. You can also add 16 more banks of 400 channels each by doing some memory changes (6.400 channels total) or you can get greedy and install the 64 bank version (25,600 channels) some of these mods are not for the faint of heart though.

I have the 400 channel mod then did the 6,400 channel mod and added the keyboard memory controller for it. The s meter mod and finally the CE/HB-232 computer control mod and use Pro-Turbo software to control it.

Hi,

Why not make an ordinary dipole cut for the frequency and mount it vertically.
It can be as simple as two pieces of welding rod with the coax braid and shield
soldered to the elements. Just make sure to run the coax perpandicular to the
elements for a few feet so the antenna doesn't develope some wierd directional
characteristics.

First of all, it may NOT be Radio Shacks fault. The Printers may have made a typo. I've seen examples many times of ads perfectly typed going to printers for mass marketing only to be in err somehow. There is usually a comment somewhere in most ads which state they are not liable for typographical errors.

Just an example. Suppose your local church is running a bingo with a prize typically of $1000 for Full Card. Usually, the ad is run correctly. Suppose the paper prints it one week - in error - of the prize being $10,000. Is the church liable? Not if they covered their butt with the statement of not liable for typographical errors. Sometimes the paper or printer who ever is doing it, will put that in automatically. That way it covers everyone's butt.

HAHAHA, that's why when you have something that is new, get a freaking warranty! Or, if you don't
get one, don't try to be "Mr. Fix-It". Leave the fixing to the manufacturer.

"Troy Walter" <twalt@hotmail.com> wrote in message

2099. scanners without freq. coverage limits

Newsgroup: rec.radio.scanner
Date: 2002-08-27 16:57:22 UTC
From: petersburg <petersburg@theavyco.mine.nu>
Message-ID: <akgapq$9sq$1@news.onet.pl>
Source record: 44439
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'd like to know if there is a list of models of radio scanners that don't have frequency coverage limits (e.g.cell phones), or models which can be modified/enhanced either by aid of computer or "manually" (;)).
It seems that even top-shell models do have such limitations (e.g. Icom IC-R9000 notabene 6200$(!!!),but it's probably worth it..) due to law restrictions in USA, or elsewhere.Is there a country, region where equipment can be bought without such restr.?
thanks in advance
petersburg

So do you actually have anything constructive to add? Or, do you just
enjoying flaming people was post an interest in buying something you're
selling.
Didn't think so....

I think I brought up a good point. I actually was interested in buying it.
Just wanted some more info. A better reason for selling. You talk up the
scanner like it's the best gosh darn scanner in the world, I wanted to know
why you were willing to part with it.
But, since you answered my quary with such an idiotic and arrogant reply
you just convinced me that your not a reputable seller.

I was going to bid on the scanner, but I needed to see if you replied to my
intial quary. I see you posted a response, but it wasn;t the answer I was
looking for. Kinda was looking for some assurances that the scanner work
was actually done by, what you state is, a highly paid individual, and you
didn't some how burn up the circuit whilst trying the mods yourself, thus
selling me a DOA scanner.

I guess your going to have to find some other means of buying your "fancy
telescope" Cause I sure as heck am not buying ANYTHING from you.

Thank you very much for your "answer"

Good day,
breezyjr

No bids yet....Hmmm I wonder why. I was going to bid on it. Nowhere near $600, but was going to make a bid. But, at the same time going to research the scanner and mods before I bid.
But, it seems if anyone questions him about it, he just answers, "If you don't know, it's not the scanner for you"

In regards to his answer to my previous post, he could have easily just said, "I have others, and I'm willing to part with it." Instead, I guess he'd rather start flame wars with prospective buyers.

Oh well. Maybe he can pimp out his wife for the "fancy telescope" hehe

2112. Why eBay SUCKS

Newsgroup: rec.radio.scanner
Date: 2002-08-28 01:01:06 UTC
From: dholloway <dholloway@futura.net>
Message-ID: <nhVa9.568$jH2.215183@newsfeed.slurp.net>
Source record: 44353

I put a scanner on ebay Sunday night. By the very next morning the reserve was met, and all was right in the world. Then today at lunch, I got this email from eBay: We regret to inform you that your eBay auction:

1376301171 AOR AR1000XLT Wide Range Monitor

has been ended. All fees associated with this auction have been credited to your account.

The item you have listed does not appear to be consistent with eBay guidelines.

It is against eBay policy to list any scanning receiver or radio that receives Cellular transmissions or has "800mz" coverage.

I did not say ANYTHING in my description about cellular transmissions, or 800mhz coverage. I did say that it was a full coverage monitor, and no modifications were necessary. And, the picture of the scanner did show an 800mhz frequency on the LCD.
Is this enough of an infraction to get booted by ebay? Apparently it is.

yep. if they see the frequency. you are good as gone. anything that even says 800 nowadays is gone. I have had many radios of mine booted cause of it. All I say now is. Canadian Model. If you take the chance again. Try saying euro model or something. My pcr 100 was canned twice.

Unhappy I can't afford it??!!
You don't know me, and don't pretend to.
I very well may be able to afford that and more, your making an awefully
big assumption.

It's sad you would even make that statement. You'd pimp your wife out
cause she looks good? What kind of a husband would make such a remark.

Another big assuption on your part. Assuming I'm married.

So what's the story with selling your moto bike parts of one by one. Did ya crash it? Is this the reason you need to sell the scanner, to pay for all the replacement parts? Just curious.

And, second, I've never mention a word to anyone else regarding their prices. I truely was interested in this scanner, that is, until you replied to my query in such a rude manner. If you'd been nicer, maybe you'd have a sell, instead of staring at a blank bid.

What about all of this causes eBay to "suck" as you put it?

Their policy is clear regarding these radios and has been for quite some time. No one from eBay came over to your house and put a gun to your head to post your radio, did they?

You violate their policy, get caught, and THEY suck? Typical.

Dan

Just forget it. He obviously isn't a reputable seller. Nobody is going
to bid up to the reserve anyway. Watch, in a few days after the
auction ends, he'll put it up for sale as a parts radio, like it
should be, This is why eBay gets a bad rep.

Not to mention also that if you are not adept at deciding what search words you need to input to get the desired results you want, the search on-line can be the equivalent of a major hemmoroid! (pain in the *ss)

At least in the catalog, you can comparative shop with similar products, as that is how the catalogs are arranged. I would almost go for the idea catalog in a PDF file or something like that, that I can look at on my laptop. (which will fit on my lap or on the sink when in the crapper.....)

I traced problems with low audio output and occasional
microphonics in three Uniden/Bearcat 800XLTs to
a bad 47 ufd electrolytic capacitor in series between
the external speaker jack and audio amplifier.

See my Bearcat scanner repair FAQ at:

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner/Repair_Tips_for_Bearcat_Scanner_Radios

I don't think he was trying to break the rules. I don't know much about
the ar1000, if it's pre-ban or not.
I think his question was valid. And, I don't hear him crying. He simplly
asked a question. If this is a pre-ban scanner, then he had every right to
put it up. Even if it's not, and it's a euro version or something, what's
wrong with that?
Just curious as to why you're jumping down his back, when he doesn't sound
like he's whining. Besides, eBay's guidelines are a little misleading to
say the least.
Not, trying to be confrontational, just asking why you are.

Microphonics. One of the transistors is acting like a microphone and the
resulting signal is being amplified. Happens in tube circiuts also.

Yes. If you show or mention anything that may relate to cellular coverage,
you're toast.

"Full coverage", "full 800Mhz", "continuous coverage", etc., are all no-nos.
Ditto for showing a cellular frequency in the photo.

The nice thing about a 1000XLT, though, is that you don't HAVE to mention any
of this. ALL 1000XLTs are cellular-capable. Those who will bid highest on
this item are already aware of it's capabilities.

Gee, thanks for pointing that out... idiot....

He doesn't say what kind of scanner it is. Just because he can run the scanner with the charger plugged in doesn't mean it's a Uniden unit where the power plug doubles as the charging plug... They do design scanners other ways... It IS entirely possible that the scanner draws from the batteries for power and NOT the charging port even if the unit IS plugged in. And thus if the charger supplies a lower output than the scanner requires for operation, AND the batteries were bad, it would not work.

If he would have been more specific with brand/type, etc. there could have been a better answer given.

I have a radio that calls for 12VDC @ 1Amp. I've also got a DC power brick that supplies 12VDC @ 500ma which seems to work OK but gets a little warm.

OK to use the 12VDC @ 500ma adapter?

Thanx,
Bob
Rochester, NY

Source record: 44385

500ma is only half the current of 1amp. Not only will it over heat, it's probably suffering a voltage drop, which could adversely affect the performance of your radio...and in rare circumstances, possibly harm it. You would do better to go to your local radio shack, and get a 1amp supply. Make certain you get the polarity correct, i.e.; + / -, or you could also damage your radio.

Breezyjr

Pre-ban or not E-Bay axes anything that is describe as 800 mhz
or cellular capable. The poster actually answered his own question in
the end of his reply. He was crying over the rules. If you don't think
he was then explain the Subject header he gave it? Crybaby and it
seems not a very bright either. This isn't a sudden or new development
at E-Bay. Dumb as a brick.

eBay is Ghetto! You really have to look around to get a decent deal now.
It has turned to all venders working out of their houses and such. It
seems nearly impossible to find a used item. At least in the sections I
look at.....

Wasn't neccesarily defending him, just seemed like people on rather
quickly.

So, I guess I just thought cry baby was a bit harsh. Maybe just a little
whiney prehaps?

Why would they not allow 800 MHz? There's nothing illegal about that. I can
understand the cellular phones, but why 800 MHz?

You don't even have to say that much to get a Cell scanner booted by
eBay. All it takes is someone to report the scanner to
SafeHarbor@ebay.com and prove to SafeHarbor that the scanner can receive
Cell. The reporting party only needs to send SafeHarbor (eBay) a URL
which has the scanner in question stating it can be modified.

Also remember, eBay will not end an auction unless they get complaints
so this means someone complained about your listing....

I was looking for police and fire in particular. I am already trunking the Jefferson County Motorola system frequencies on a Radio Shack Pro-2050, but I am getting some weird ID's. Some of them are 12336, 35415, 34816, and so on. How can I figure out what agencies I am listening to?

you can get 1 amp power supplies for cheap. I can get you one of those univeral voltage one for under 8 bucks US. it uses seperate plugs for the connector. not the all in one connector. I have used it for over a year now. very reliable. These are new too. I have a electronic wholesaler and will be glad to sell to anyone for cheap $. I ain't in it for the money. I am in it to see people pay a proper price and not get ripped off for a quality part.

Seems to me that ebay is covering their butts with this policy.
They certainly don't want to be charged with facilitating the sale of illegal equipment now do they ?
Hell I've heard complaints from military memorabilia vendors about their policy of canning any auctions having anything to do with nazi's - medals,daggers and such.
I think they have more cause for complaint, as that policy is just them trying to be politically correct as opposed to the scanner policy,which is a matter of the law.
With their volume of business it wouldn't be very feasible to make exceptions - nor do they need to.
Try yahoo or one of the other myriad auction sites maybe you'll have better luck.

Not necessarily.
They have bots which scan the ads looking for catch words like the ones
mentioned in other post's.
They will end the auction,complaint or not,if they feel the ad is in violation.
If they just relied on snitching twits to end auctions I'm sure the majority
would never get cancelled,and ebay wouldn't have much of an excuse saying
"ummm..no one told us ".

You are so right and will soon be even more so as the FCC is moving to reduce the phase in period to get completely away from analog and everything will be digital.

I saw the other day, some guy trying to sell a 2006 with the cell board it in for mega bucks (like he paid) and thought what poor fool will pay that price and find out most of the activity has moved to digital anyway?

With the consideration of moving public service to, at least in part, 700 MHz that is a hole more scanners should fill

Something is a bit loose in there and it is picking up vibration from the speaker and the circuit is amplifying the resulting signal. The microphonic pickup is causing feedback when the audio is strong enough to reach a critical point. If you use an external speaker the problem will go away. Fixing it is not easy since almost anything in the circuit could be picking up vibration. You could pop the cover and make sure all the screws are tight and that no parts are obviously loose. Other than that live with it using an external speaker or send it in to Uniden for repair.

>Is there a country, region where equipment can be
>bought without such restr.?

Yes. It's called the PLANET. That's correct, the USA is
the only country on earth with such restrictions.

You see, here in the land of the fucking free, the
police state feels that law enforcement should be the
only ones entitled to have full coverage scanners.

But like McCartney said 'all those years ago', "people
will find a way to go no matter what the man says".

Your pursuit is an honorable one too, because in spite
of what some people may tell you, if you don't own an
unblocked unit, you don't know what you're missing!

Can you imagine spending $600 on a brand new scanner
with its frequency range irrestorably castrated by the
factory because of some asshole law? Not me.

Javiation is good, but try cbshop.com too -Both will
ship all over the world, but you assume certain risks.

There's no such thing as a 'cell board' in a Pro 2006.

If the cell band hasn't been activated, simply open the case, and cut one diode.
VOILA, you have cell band.

Omaha police have arrested a man they suspect of using a hatchet to rob three motels overnight Sunday.

A security guard listening to a scanner called police after he saw a man near 72nd and Spring Streets who matched the description of the robber, Cisar said.

The suspect refused to pull over for police, who chased him across central Omaha at speeds reaching more than 90 mph, Cisar said. He was arrested at Country Club Avenue and Blondo Street, Cisar said.

Here is the link for the story and local comment:

I 'sopse that's why the county gave me a radio - so I could take it
into the head with me. Now, I can fix two problems. If I can make the
system work in the restrooms, then my in-building coverage should be
fairly good... (don't mind me, I'm just thinking aloud)

But there's a problem. Since it's a portable and since it's issued,
not a scanner or similar, it makes me an intended recipient and not a
member of the public waiting for radiowaves to be broadcast to me,
particularly if I go in service, but then radio into communications
that I am in the process of a constitutional. I'm exempted. If not by
virtue of taking a constitutional, by being an intended reccipient.

I'm getting a headache.

>That's what Firebuff5200 said,
>right?.... er,uh... I mean, correct?

Yeah, sure. I guess.

One of the neat things on the internet is search engines. I put the model number into Google and found tons of info. You might give it a try.

Our local rat shack has a pretty high turnover, but there are two people
who have been there for some time. One is pushy - tries to sell all sorts
of stuff, the other doesn't do so but waits for me to ask.

Guess which one gets all my business - and the commissions that go with it?

Leaving on a JET PL:ANE, Don't know when Makey's coming back!!!!!!!!!!!!!!!!

Iraq war

SIOUX CITY -- The simple fact that Iraq is still a threat to other nations and people ought to be obvious to all but babies and passed-out drunks. It is sad that no amount of reasoned argument displayed actions will convince far-left bigmouths like John Gillis of the truth, i.e., that Iraq is a threat to the security of the world, including the United States. If only the first President Bush had allowed our troups to go to Baghdad 11 years ago, we would be safe the suffering of the Iraq people would be only a bad memory.
This, of course, raises an immediate and concerning problem for people like myself who want to protect our children and other citizens: How do we channel the "naive Johnnie Do-Gooders" enthusiasm for allowing Iraq to continue to build their arsenal for lethal destruction?

I propose the only solution that comes close to poetic justice, send them all to Iraq!!! Iraq has gassed their own citizens in the past! These draft evaders, AM radio talk-show haters, girly boy types can sample what they say isn't there. The rest of us who can effectively cope with reality can stay here in the US where it will be safe AFTER the Iraq weapons of destruction have been eliminated, courtesy of the US Armed Forces. Give the "naive Johnnie Do-Gooders" a plane ticket to Baghdad and wish them the best of luck.

Don't forget to thank your active and reserve military members for your freedom. -- John E. Mackey, Jr.

Gee.you should see what they Did to BC. now. They Purposly closed over 5 hospitals that I know of. just so they can get people to move bach into the cities. Where I used to live in BC for 2 years. each hospital was 60 Km away. I lived in the middle. we had a hosp too. Too almsot a hour to go to either. besides the local one. They closed the local one and one if the other 60km one. so if someone is sick or on their deathbed or from a accident. they have to drive over 150 km to get to the hospital now. bad enough they Upped the taxes for food and everything else. 14.5% sux. Get a stick of gum and payt hat tax. Liberals suck and they always will. Don't forget that the liberals are putting the low income with the poor and the rich get to live in luxury now.

This is off topic. sorry
Dev.

Allied, Layfayette, Olsen, BA / Burnstein-Appleby (?). I loved getting their catalogs and drooling over the neat stuff them. When I moved to very rural NC ('65-'67/'69-77), these were a lifesaver for a techie. A sad day when RS bought Allied. On the other hand RS had store in a mall near my house in St. Louis (Mehlville) which I spent most of my cash at (1967-69). Used to buy the $1.00 grab bags for parts alot, always got my free 9V battery every month. Mostly TV coils, caps and resistors. We had a Layfayette at another mall but they seemed to specialize in stereo equipment, not too many parts. I also used to visit the Olsen store during trips to Atlanta back in '70-'71.

My first solo bus trip in 1965, I was 9 years old and hopped a bus from Aurora to downtown Denver to the BA store. My parents never did find out. I liked the BA and Olsen catalogs the most, lots of neat consumer surplus (not military) parts and assemblies (stereo amps, transformers, clock movements, etc.) for cheap.

Ahhh... Those were the days.

It is a BS rule, particularly considering that analog cellular usage has
pretty much gone digital in most populated areas.

I don't know about a Usenet group, but I've read
a web-based chat board for Japanese scanner hobbyists at:

http://www.ag.wakwak.com/~top/cgi-bin/bbs/cyclamen.cgi

Too bad it's in Japanese. To translate to English,
I type the URL above into this translator:

http://babel.altavista.com

The translation is rough, but it's interesting
to read about the new model scanners before they
arrive in the USA.

Please let me know if you find an English language
resource.

I use Air Nav 4, AirNav Acars decoder and Selcal decoder and like them all.
I have used Airmaster 2000 Acars decoder and prefer and get more accurate
decoding with the Airnav Decoder.

Airnav4 is an excellent database and the mapping features are excellent.
The one thing I miss on the maps though are the political boundaries that
Airnav 3 had and 4 does not have. On 4 though it is much easier to make a
map with the zoom feature rather than needing to put in longitude and
latitude.

I have found that the key with any Acars decoder that uses the sound card is
to make sure you have a line in since the microphone input does not work as
well.
I have also found that if your radio has a record output it may work better
than the speaker output it did on my Icom 7100 and does on my Icom 8500'

I want to install a Radio Shack 2066 scanner and a Uniden CB radio in a 1997 Dodge full size pickup with 4X4. Can anyone suggest practical layouts for placement? Where can I, or can I buy an overhead "visor type" tray that would accomodate my truck?

All suggestions welcome! Thank You

Marty

You don't have to even prove to ebay, all they need is someone to bitch to them about your item. They get cold feet in a second and pull your item. Ebay officials wouldn't know what is 800 or not unless some jealous do-gooder tells them.

Post your items on "YAHOO" auctions, almost anything goes. I stopped using ebay two years ago and found the majority of items I want or need on yahoo and other auction sites. Ebay isn't the only online auction site, nor is it the best.

Boy you can say that again, those WERE the days.....
I used to wear the catalogs out seemingly overnight as soon as I got them. I too loved the grab bags and such. We had a Olson store about 30 miles from here, a Lafayette and I "think" a Heath about 20 miles away. Radio Shack had just parked one about 10 miles away. I got to the shack more than the others, but no matter a trip to either was a field day. I'd love to see those days again.....

Wal-Mart never sold it. K-Mart stopped selling it awhile back. They've been found at Sears & Lowe's.

You'll probably do better buying one from Amazon.com or one of the well known shortwave radio dealers on the net like Grove or Universal Radio. Amazon.com sometimes has them on sale for $39 or less.

Greg:

Real quick one: does the AirNav (suite) 4 include the ACARS decoder
software, or must one also purchase their acars program separately?

Couldn't tell for sure from their web site.

If you are by any chance familiar with it, how does it compare to the Wacars
0.7 (free) program?

Looks like it'll be fun and interesting to play with.

Thanks,
Bob

The decoder is a separate program from the Suite. I have used Airnav for quite awhile and you can use a variety of decoders with it.

I beleive you can try the decoder for free for awhile. Try it by itself.

I prefer a discone antenna to decode since most of the signals you will get are from the airplanes in the air and a discone while having no real gain is extremely omni directional. The discone coupled with the AOR ABF125 airband filter really does a nice job.

When I was a kid, the day the new Allied catalog came was right up there with Christmas and my birthday. The Olsen catalogs were really fun, although I'm not sure I ever bought anything from them. Was the BA catalog the last to survive? I remember ordering a TV antenna from them in 1978. It seems like the others had disappeared by then.

Where I live, there were no such stores... but when I was about 10 we went on a family vacation and I was in heaven when we stopped at a Radio Shack store in Boston. (This was when they were still primarily a mail order outfit with only a handful of stores.)

We did have a local store, primarily wholesale electronic parts, but they did sell to retail. And those men behind the counter were so patient when I came in to buy one alligator clip or one phono plug. We eventually got a RS store (right before the Allied merger/fiasco) but it just wasn't the same... although 100 percent better than they are now!

Out of nostalgia, a couple of years ago I bought a 1970 Allied catalog and a 1973 Lafayette catalog on e-bay. And to think I one time, years ago, I had stacks of them.

Yes, those were the days!!!

Joel Hermann

Rough to say the least. I did this. Mostly cause I was curious about the
translation. Half of it doesn't make sense. I guess it doesn't do to well
with Japanese.

Kinda funny though....

Canada has it all: sky-high federal and provincial income taxes, 7% GST
(national sales tax) and 6-8% provincial sales tax. Plus, confiscatory levies
on gasoline, alcohol, cigarettes, etc. Have to pay for that efficient
socialized medicine system, ya know.

Ignore the ignorant guy who wants you to do a Google search. Your question is what newsgroups are for.
I have a 9000XLT and it is a fairly sensitive scanner. I am about 12 miles outside of the Twin Cities, MN. I have tried a RS discone on it along with a Scantenna both overloaded the radio with lots of intermod from local FM's I finally dropped down to the cheap little outdoor scanner antenna RS sells and it works wonderfully. I can pull in most of the Twin Cities area with out overload.

I also use a RS 2053 off the whip and it does nicely also.
Unfortunately the whole Metro area is going digital so I enjoy it while I can.

A good used 9000 should be around $200 with the UBC version going for a bit more.

And how do you consider it "ignorant" to point someone to a source of knowledge?

There were a number of reviews of the particular scanner on the web.

The AN-1 won't do you any good. Despite it's batteries, it's basically only an impedance matching device to match the Sony "stick" antenna to a generic radio. Close to useless for any application.

If you want to go active antenna, I suggest the ARA-60 from Dressler (http://www.dressler.com/html/fr_products_index.html). Irrespective of what other people say about the shortcomings of active antennas, this one does little miracles. (I'm not an agent or dealer, just a satisfied customer).

This is from the BC785D group on Yahoo:

From: "jay911_50"
Date: Wed Aug 14, 2002 5:55 pm
Subject: Digital Scanners in Canada

Greetings all and sorry for the cross-post in 4 groups, but I think this is of use to any and all involved in each group.

I emailed Industry Canada regarding the laws with regards to digital scanner receivers in Canada - namely, the rumor that they must be licensed for operation. As it turns out, yes, digital receivers must be licensed for use in Canada. However, it's a quirky thing that I'm not sure how they will go about accomplishing. See for yourself in the reply I received today, quoted below:

--j.

-=-=-=-=-=-=-

Dear Mr. Lxxx:

Concerning scanner receivers, we have two standards, one for certifying analogue types and one for digital. Analogue scanner receivers are subject to certification under Industry Canada's standard RSS-215, Issue 7 (Aug. 1996), but are not subject to licensing. Digital scanner receivers are subject to certification under the standard RSS-135, Issue 1 (Oct. 1996), and are subject to licensing. The standards RSS-135 and RSS-215 are available, respectively, at the following internet addresses: http://strategis.ic.gc.ca/pics/sf/rss135.pdf and http://strategis.ic.gc.ca/pics/sf/rss215i1.pdf .

In a conversation with our certification experts, I was advised that the card could not be made available as a separate item but only as a component of a complete scanner receiver. A scanner receiver with the card installed and thereby having dual analogue/digital capability would be treated for certification purposes as a different device from the scanner receiver without the card. It would be subject to certification under both the standards mentioned above and to licensing by virtue of its digital function. Once certified, it would be assigned its own certification number identifying it as a unique product. Therefore, it would not be permissible for a user of an analogue scanner receiver to upgrade it later through the addition of the card.

Please do not hesitate to contact me should you have any
further questions.

Sincerely,
Michael Tremblay
Spectrum Engineering Branch
Industry Canada

2226. Icom IC-R2 - possible to step 1mhz in AM for non-us/ca model?

Newsgroup: rec.radio.scanner
Date: 2002-08-30 09:25:20 UTC
From: megazone23eve1@yahoo.com
Message-ID: <a0d38ecf.0208300125.57ea2155@posting.google.com>
Source record: 44316

Hello All,

I purchased an icom r2 scanner from Ireland and was bummed to find
that the non-us/ca versions do not step in 1mhz in the AM band.
Is there anyway to circumvent this?

Thanks in advance.

2227. ar8000 & serial interface

Hi,

Has anybody used this cheapo interface for transmit data only to the ar8000.

http://www.hollis.co.uk/john/ar8000sl.html

Its basically a couple of resistors, with a zener diode...

I've made it up, but it doesn't seem to work.

The remote control port on my 8000 was fitted by Javiation, and it works ok
with my opto scout.

?

Cabelas had an overhad visor shelf in their catalog that would fit a Dodge. The center console between the front seats can be removed on my '97. You can then build a radio console to replace the seat/storage compartment there. Also, a "CB sized" radio will fit on the panel below the steering column.

There was a email discussion list a few years ago of US Citizens that were
Ham, SWL and scanner users in Japan. I would check Yahoo groups and
LISTSERV to see if you can find anything. This is the web page of a US ham
that lives in Japan and you can contact him by email and I'm sure he can
point you in the right direction.

Went hiking in the Beaver Valley area, and while resting on top a cliff, I heard what sounded like both sides of a phone conversation.The caller's audio was very low.The party called was louder.
The calls started with a bunch of tones then an operator asking for the number.
There are other freqs. 152.765, 152.820, 152.760, 152.795 & probably more.
The area is rural but not remote, there is also cell phone coverage.
These freqs. were the old mobile telephones from the late 70's. Other places in Ont. they are used by pagers.
Anyone know what kind of service this is, sounds like it would be expensive with a live operator and a high power transmitter per call.
Matt

Source record: 44323
Cross-posted to: alt.radio.scanner,rec.radio.scanner

At 6:45 AM this morning my weather radio went into alarm mode. A red light I had never seen before was lit on the "Warning" indicator. I stopped the loud tweedle and selected voice. 500 miles away in Bakersfield an "Amber alert" had been declared due to a missing child.

When 9/11 grounded every aircraft in the nation, my Weather Radio had no alarm.

When a tornado hit the nearby city of Sunnyvale, again, the radio was silent.

A recent 8 alarm fire caused fallout of burning embers setting many roofs on fire in the city, but that was not important enough to even put an advisory alert onto the Weather Radios.

Something is way out of proportion here. I don't want to be against the Amber Alert thing, but waking me up at night with a false emergency is wrong.

There are a lot of things getting what out of proportion lately! In Michigan, we have had several police officers killed in the line of duty recently. NOW they want the death penalty for cop killers. But if my wife, son, co-worker, neighbor, etc, get's murdered, it's business as usual. Don't get me wrong, my heart goes out to the families, and co-workers of those fallen officers, but what makes our lives not worthy of the same consideration? Personally, I'd like to see the death penalty for any 1st degree murderer!

The Amber Alert is a wonderful service, but just like the Brady Bill (guns), it goes beyond it's intended purpose.

But we now live in a time where we do what sounds nice, and not what makes sense.

Bill Crocker

You call a missing abducted child a false emergency? Man, you need help. Anyway, is your wx radio a
programable one? If so, you might want to reprogram the emergency alerts.

The weather bureau had 4 choices:

1. announce with no electronic alert
2. "statement" alert
3. "watch" alert
4. "Warning" alert

They chose the highest level, a "Warning." Even a radio programmed to reject "statements" would still be waking folks. They violated common sense. Missing children occur every day. The daily alerts where there is no danger to the listener will make the system unusable.

I call these stupid amber alerts and all the attention child abductions
get VERY ANNOYING.
And I couldn't care less.
Too many kids in the world anyway.

Even if it was your child. I do agree that the Warning is over kill, but a statment would have been more in line.

What kind of creep are you anyway?

Kids should be found when they are lost! Who do you think you are?
You may have lost some sleep but a child was missing!

This is the "Year of the Child" in America. Children have
the right to be safe.

Children have the right to smoke pot - not cigarettes!

Children have the right to listen to RAP (hip-hop) when they want!

Children have the right to go to school and NOT learn anything!

Children have the right to steal your car and break into you home!

Get your priorities straight!

Susan

What's worse is that they are also sent out via email, meaning that they'll be endlessly forwarded for years to come, long after the child has been located. I received one forwarded to me, and sure enough there was no date whatsoever on it. It just stated that the child was missing "today." I expect to see this one in my inbox repeatedly in the next few years.

I have one. I am pleased with it's performance. Nothing special about it but it does work well. Takes lots of batteries (6aa). I am NOT impressed with the price though. I purchased mine at Fry's Electronics a couple years ago when they were closing them out for $69.95.

Which would you buy? I have located a DJ-X10 used but in like new condition for $200.00 (new price is about $330). And I have located (will see it tomorrow as its local) a DJ-X2000 for $400.00 (new is $500) and it too is in like new condition. Neither one had been used much.

Which do you think is the better deal?

Just go to the Industry Canada website and do a search and it will give you all the info that you need. The direct link is http://apollo.ic.gc.ca/pls/eng_alpha/web_search.geographical_input and enter in the location that you heard the transmission and the frequency and they will tell you. I must agree with Dev that it sounds like Auto-Tell.

I bought a used one last fall at a swap meet. Works well. The display is small but contrast is good. Audio from scanner is very good. Backlight is only for display, and lights only while button is held down. Takes 6 batteries, but the run time is good. The scanner is a RCA release from GRE of the same scanner that was RS Pro-62.

Best guess is that your charger is thermally protected and shut down when it overheated. This may have resulted in your batteries getting drained and your scanner having no power for a couple of days resulted in the lost memory bank.
Unplugging the charger and letting it cool reset the overload protection circuit. Now you need to recharge the batteries and reprogram the scanner.
Of course this is all a guess without knowing specifics about your charger, and scanner. This is also a best case situation, to give you hope. ;^)

August 27, 2002
Wireless Spectrum Up for Bid
By Carmen Nobel

The Federal Communications Commission (FCC) this week began auctioning a chunk of spectrum in the lower 700MHz range, while keeping its plans to auction off the rest of the spectrum in January.
The abbreviated auction is a compromise from Congress, addressing rural wireless carriers' immediate need for additional spectrum while still acknowledging urban carriers' assertions that they don't want to pay for new spectrum before current tenants exit the band.

Under the terms of the deal, one license will be offered in each of 734 metropolitan or rural service areas, and one license will be offered in each of six economic area groupings (EAG), for a total of 740 licenses, according to FCC officials in Washington, DC.

"We're glad that the majority of the 700MHz band has been held," said Travis Larson, a spokesman for the Cellular Telecommunications Industry Association, a lobbying group for commercial wireless carriers in Washington, D.C. "It will allow the FCC, in conjunction with Congress, to devise a better spectrum management plan."

In late May, the FCC for the sixth time postponed the auction of the 700MHz frequencies, this time from June 19 2002 to January 14, 2003. Spectrum in the 747-762 and 777-792 MHz ranges is still due for auction in January.

The 700MHz auction has been delayed so many times because prospective bidders have complained that it doesn't make sense to bid on spectrum that is already occupied. And several cable TV stations already occupy the 700MHz band.

The TV stations are required to leave the band as part of a national transition to digital television, but they are not required to leave before 2006 or when 85 percent of households can receive digital TV signals-whichever comes last.

The FCC has suggested that potential bidders negotiate with broadcasters and pay them to move out earlier. In a statement last year the commission said, "the private sector ... [will] determine the band-clearing mechanisms that will best suit broadcasters' and potential new 700MHz licensees' needs." (An FCC official said last week that the same rules would apply for the abbreviated auction as with the larger auction next January.)

So far the broadcasters have not budged. Rep. Billy Tauzin (R.-La.)
has plans to introduce legislation to address this issue next month.

"We look forward to seeing that," Larson said.

I still don't see what cell mods are good for. Most people should know by now that if they export a new canadian scanner. The frequencies are unblocked anyways. unblocked r-2 's go for around 200 - 220 new.

What the hell would you know about war, or why it is or is not neccessary.
How many wars have you fought in , Mackey ?

As to the article, the US government is just kidding itself about "which arab countries are not terrorists". Any country that has the oil we need is "not terrorist" in case you had failed to notice. It isn't just iraq that is the problem. What happened to the phrase "WE wont do business with countries that harbor terrorists ?" You dont hear that any more, do you ? I'll tell you why you dont hear it. Because Saudi Arabia, the country that supplies the bulk of the 800 billion barrels a day we consume, is a hotbed of terrorists. And America is her "Oil Whore". Forget about conservation , with Big Oil in control in Washington ! Forget about getting off the "oil tit", so we can actually clean up these terrorist countries. We recently stated what a "great pal" Pakistan is to us, the country where the Taliban were created and trained, and where they still wander the streets unmolested ! Where they run schools that CREATE Bin Ladins, to this day.
The president's pinhead wife was on tv one day, stating how "If we educate them and give them economic opportunity, so they are not poor any more, they will abandon their terrorist ways." What an ego. Being poor has nothing to do with this. Is Bin Ladin's family "poor" ? HARDLY. And neither was Bin Ladin himself. You have to realize you are dealing with a bunch of backward idiots here that live, eat and breathe their sick-assed "religion" that preaches murder and terrorism, and that being "poor" is not a factor here. See the big picture, with all its ramifications. They are all in this together, and they want the whole rest of the world to go back to the year 1600, and be muslim, or they are going to continue. Its just that simple. When it comes to religions, they are the most bigoted bastards on the planet. They hate any other religion, and will make war on its followers at the drop of a hat. They especially hate Christianity, and have actually murdered many of its followers in their countries. The Taliban, in case you had not heard, were in the habit of dragging you off to the football stadium, and shooting you in the head, for the slightest religions infraction, such as your beard being too short, etc, etc, etc, ad nauseum, for the entertainment and gratification of the "true believers" in the stands. Education ? They totally abhor and forbid it, since it tends to make their followers unhappy with their lot in life, and makes them harder to control. The "moderate" muslim ? It's a myth.
Bush and the rest of the clowns in Washington go on periodic "ass-kissing" missions around the middle east, to ensure that there is an adequate supply of heroin for the "Oil Junkie"......
I suggest that if you propose that everyone that doesn't know anything about this be sent over there, that you get YOUR plane ticket first...

I am looking for a good handheld antenna for military airband. Does anybody have any suggestions?

So far I have only managed to find one, from Scanner Antenna Specialists, using a web search. Has anyone tried their milair antenna and is it any good?

Thanks all

Troy

2276. Trying To Receive ACARS Using WACARS 0.7 : Nothing At All; Hints?

Newsgroup: rec.radio.scanner
Date: 2002-08-31 15:42:09 UTC
From: Robert Rose <rgsrose@tiac.net>
Message-ID: <akqo3sssc1@slb1.atl.mindspring.net>
Source record: 44215

Hi,

Trying to receive some ACARS for the first time.

Have installed WACARS 0.7, and "believe" I have my PC's sound card
configured corrctly?
But, I wouldn't swear to it.

I'm using the Line In, and the sound card's Mixer (Turtle Beach) is set for
RECORDING.
This sound right?

If anyone's playing around with this program, can I inquire if there are any
gotchas, or non-obvious items, to configure?

I get absolutely no indication of any signal strength at all on their meter
at the bottom of their page.

Of course, perhaps my receiver isn't picking up anything?
That's a possibility. What does it sound like from the speaker? I'm using
AM mode; right?

Have looked at the general ACARS frequency listing, and have tried several.

Anyone suggest a good frequency to try?
I'm about 25 miles due West of Boston.

Better reception in the evenings, generally?

As always, any hints would be most appreciated.

Much thanks,
Bob

The main problem with buying goods from Canada is that the prices
are insane. I someone really wants an unblocked unit it's much cheaper to
order from overseas.

don't forget to have your squelch off. fully open. if you record is set for line in and check marked. try putting the wire into mic. shut off the mic boost if you have that option. Then checkmark that one. in file in the menu bar. only check mark 1 of the soundcard speed. I don't have the program open. it is 3????? or 44100 I think it is. If you have IRC then I could go thru steps faster to see if you can get it to work.

hey pecker nuts. I ain't trying to ruin his sale. If I lived close to him. I would probably buy the radio. All I was saying dipshit is that I don't seee why everyone wants to buy radio's with "cell mods". I don't see why Cell Mods should up the price of a radio when they are vastly available. That was all. You are just mad because you didn't sell your radio. What is the point of a handheld in a base environment. I Would not want a R-2 sitting on my desk. I rather have a base station like I have. I would not mind a 2nd one. So lick my balls you crybaby.

ya that is true. But out crappy dollar and what the liberals did. Euro
Prices here are about the same. :(. I mean buying overseas for here isn't
worth it. costs the same.

Have a great day isobad.

Looking for help in repairing friend's old scanner radio model Bearcat 250. Everything else seems to work ok but has a low volume. I tried an external speaker and the volume level is the same. I sprayed a contact electronics cleaner in the volume control and still no difference. Since Bearcat does not repair or carry parts for this older radio anymore and looking at the volume control shows a capacitor or something soldered across it I would imagine an aftermarket Rat Shack model would not work. Any ideas, pictures or what to do. Nick

Great summary of the truth.
We should give Saudi Arabia an ultimatum.... Cooperate with
us fully or we will let Iraq do the same thing to you as what they
did to Kuwait.

Personally I'd love to see it happen. I'd love to see how long those
sand nigger Saudis would be diplomatic and political towards their
Iraq when they are on their border ready to kill, rape and
plunder their fucking backwards "kingdom"
They talk out of both sides of the mouth all of the time.

We should immediately take over the oil fields in Iraq... use the
$$ to fund a War against them using the Iraqi oppostion to do the
fighting. (No sense in endangering valueable American troops)
And give whatever $$ that is left over to any Iraqi who defects.
Continuously drop leaflets onto Iragi telling them of our new '$$ for
defection program'
An extra $26 milliion for the head of Saddam Hussein in used diaper bag.
Its time to set this fucking backward Islamic area of the world
straight while its still feasible to do so.

Theres a new sheriff in town.

You might try to get a schematic of the unit, it sounds like the audio amplifier chip went south on ya.
Here is a # you can try to order a roadmap of the unit.1-800-554-3988 (Uniden parts)
Hope this helps...

It's likely that the audio amplifier is dead.

With the schematic you might be able to find the part, and replace it,
but is it worth the effort?

Why? What was the warning going to say? The news media was doing a fine job. Using the emergency network would have had no benefit.

> > When a tornado hit the nearby city of Sunnyvale, again, the radio
was

> >

Better check why. Is the frequency you are tuned to cover that area?

> > A recent 8 alarm fire caused fallout of burning embers setting
many roofs on
> > fire in the city, but that was not important enough to even put an
advisory
> > alert onto the Weather Radios.

That's not weather. Sadly some (most?) City/State/County areas don't feed the NWS (Federal) alerts to broadcast.

> > Something is way out of proportion here. I don't want to be
against the
> > Amber Alert thing, but waking me up at night with a false
emergency is
> > wrong.

You want coverage? Get a EAS radio to sit next to your weather radio for added coverage. You don't want to be bothered by Amber Alerts, get a radio with S.A.M.E (specific area message encoding). Those radios will allow you select what alert you are interested in and better units will allow you to select what kinds of alerts.

But just remember one thing - by in large SAME and EAS is to serve the broadcasters. The fact you can get such a radio for your own use at Radio Shack is just a byproducts. At this time it doesn't really factor into the decisions made by those behind the switch.

Yeah, you're running your mouth once again about stuff that you don't even have a clue about. If you want to spew your tiresome drivel about cell mods, for the 76th time, go start your own post. Of course you won't. You've already proven that you're an unimaginative leech who was born without a brain. Now piss off and see if they have an schools in Canada for illiterate poor trash like you.

I would go with a 220-400 MHz band antenna. It doesn't have to be milair
which is just a code word for more expensive in scanner antennas. I use
a dual band 144/430 ham antenna with my receiver and it works great.

Only recently has the alerting system used with NOAA weather radio
been tied in for CES (Civilian Emergency Messages) such as the "Amber
Alert". This is the primary reason why it did not go off for 9/11. Now
that NOAA and the EAS (Emergency Alert System) are working much more
closely, I believe that we'll all be hearing more alert messages. The
various authorities are also working to provide more localized
alerts....

2300. Help id stations using NFM in 260-270 MHz

Newsgroup: rec.radio.scanner
Date: 2002-09-01 00:16:45 UTC
From: Barun Gupta <barun@worldnet.att.net>
Message-ID: <N%cc9.45150$Ke2.3185277@bgtnsc04-news.ops.worldnet.att.net>
Source record: 44240

I recently got myself a BC780 and have been enjoying playing with it. This afternoon I built a little antenna from speaker wire cut for about 260 MHz (credit goes to Oscar, DJ0MY for his HQA design). It took me all of 15 minutes to build and I used thumbtacks to stick it on the wall. Anyway, I have picked up several stations on 263.930, 263.670, 269.950, and 263.950. All are in NFM and not in english - possibly spanish. Anyone have any idea as to who these might be?

Hello,

looking for a service manual for the whamo 10 regency scanner. This is the one that uses the aluminum combs to program it.

If anyone has any info it will be much appreciated!

Ralph

Low audio output on a Bearcat BC-250 scanner?
The audio output capacitor, which is in
series between the audio amplifier output and
speaker, can go bad in Bearcat scanners.
That produces low and/or distorted audio.
I've replaced many of them.

Check/replace audio output capacitor C81, a 100 uF 16 V part. It is
connected between pin 12 of the audio amplifier chip (IC-4, a type
TCA 830S) and the external speaker jack.

If that doesn't fix it, check/replace C82,
a 22 uF 16 V cap which connects between pins 4 and 12 of IC-4.

Good luck.

> as to who these might be?
>

Most likey you are picking up Military Satillites. I know that 269.950
is a downlink freq for one of the FLTSATCOMM birds and 263.950 is on of
the military UFO (UHF Follow On) birds.

If conditions are right you will hear non english radio stations being
picked up on the UpLink freq and relayed by the satellite on the
DownLink freq.

How many Tornado Warnings should they give per missing child?

Why not place the military on Alert?

How many hours of Air Raid Sirens per child?

Don't forget to issue a Tsunami Warning while you are at it.

Who do I have to be?

Newsgroup: rec.radio.scanner
Date: 2002-09-01 12:16:02 UTC
From: Den6N <den6n@rcn.com>
Message-ID: <akt0f2bbo1@bob.news.rcn.net>
Source record: 44159

That MAY be akin to the Radio Shack PRO-2026; I know the BC760 is essentially the same radio as the 2026. Do you have three wires running from the power connector? If so, one is for ground, one is for ignition-on power (so the radio won't stay on and drain the battery when the ignition is turned off) and the third is for a direct-to-battery connection, to keep the memory when the ignition is off. If this is your problem, then all you have to do is find a source of constant 12V power, such as the cigarette lighter connection, which in most cars is 'always hot', and run a wire to that connection so the memory doesn't disappear when you turn off the car.

Message-ID: <9u24nucn8qajhip1rgfotb62njbs8gp3ov@4ax.com>
Source record: 44160

Hi David Monroe in Canada,I have the most special of all 2006's awaiting to grace your mailbox.

Features:Case with no Plastic (totally redone with x-ray proof whimsidookle for shipping of highly explosive parts)

LCD Display has been modified for direct injection of Hydrochloric acid directly to your face.(Only activated if you tell a lie)

Power Modification has been all done,you can attach it directly to your balls for the most intense scanning you have ever seen.

Ah yes and the most of the most of mods.....The DELAY. Delay has been totally redone.I'm so excited ,the delay has been arranged so that when you sit for x amounts of minutes in front of this glorious rig,scanning,ripping people off,sending bogus newsgroup ripoff messages,it senses your tenseness and automatically redirects your computer to the nearest frapping site on the internet...

And for you David what does this all cost,for you I think it should be free,yes even with all these fantastic mods that have been included,you pay nothing....kinda goes along with what you are - don't ya think??

2321. Re: Neat Installation ...Tips Please!

Hey, make sure you put it somewhere where you won't take
your eyes too far off the road! It's easy to get distracted by
hearing something good and trying to get it back, or reprogram
it while moving...the CB is less distracting, but the scanner can
cause a bad accident if not in a very easily viewable spot. If it's
illegal to use a scanner mobile where you are, try disguising it
or having a way to conceal it completely. I once had a small CB
that I got tired of removing, and disguised it as a tissue dispenser.

I'm an Asst. Manager for RS & if you frequent your local RS you know who the people are & who to avoid. As far as pushing cell phones goes we are under siege by our higher up's to push this stuff. Personally, if I see someone with a cell phone I don't even bother to ask I just get you what you need & get you on your way as quickly as possible. I still earn plenty of commission but after working with people directly for over 15 years (Previous Job) you can tell who might be interested & the person who knows what they want. I agree w/the other RS employee on this one, if you don't like being jumped on about wireless & satellite then take your business elsewhere. You have the right to tell an RS employee before he/she opens their mouth that you don't want to be offered a great deal & I'm sure they will back off. As far as product pricing goes, WE DO NOT make up the prices so don't bitch at us, these prices are set at the main office in Ft Worth and we have NO control over the cost of products. In fact we have no control over a lot of things and I myself would appreciate it if customers stop complaining to me & take to Ft.Worth 1-800-843-7422 or 1-800-THE SHACK if that's easier to remember.

Dev,

Here is the URL: http://members.aol.com/dj0my/hybrid.htm. I was extremely surprised at the performance. The only other scanner that I have that can recieve 220-400 MHz in NFM is the Sony ICF-SC1. Anyway to validate as best as I could that this antenna was making the difference, I tried it with both scanners, tried AM mode, tried a couple of other antennas and my conclusion is that this antenna works quite well - though thre isn't a whole lot to get on the 260 MHz band.

I then tried to build one for the 900 MHz band. Built one from speaker wire and another from copper tuning. Again, I tested this with several antennas and scanners. Found that the antenna is very directional, that it works better with the loops horizontal but that the Max 800 is a better antenna - its omnidirectional and performance is a little better. It could be that at 900 MHz with 6 ft of speaker wire as a lead (I know, I know) there cable loss was too much.

By the way, I'm located in CT, nowhere near the border of any spanish speaking country. I'm inclined to think that what I was getting was one of the UFO probably UFO 9. Are the UFO sats commercial and used for cell phones?

Anyone had any luck with a relatively simple antenna + preamp to recieve FLTSATCOM? If so, I would be interested to find out about your setup.

At $109, its a great price for a VR-120. However my suggestions are:

a) For your first scanner, don't go for a wideband. Either get a scanner or a SW reciever. Scanners generally cover 30 MHz to 1300 MHz and SW recievers generall cover 150 KHz to 30 MHz.

b) Don't get one of those mini recievers that don't have a keypad to puch in freqs. In other words get one that has a keypad.

c) My preference is to get a base model as opposed to a handheld, but I can appreciate the convinience of a handheld vs a base model.

d) You are probably better off getting a scanner that has trunk tracking capability.

e) The one band (freq coverage) that seems to have a big impact on price is the milair band from 220-400 MHz. If you are close to a military base, this might be of interest to you.

So what does that narrow your choices to? A brand new BC895 is about $200 and a PRO 2052 is about $250. Both of these have the milair band. The BC780 is probably the top of the line as far as scanners go and that costs about $350 new. If you can afford $350 for a scanner, get the BC780 - no question about it. You can get a reconditioned BC780 from Uniden for about $300. On further thought, get a BC895 used, reconditioned or new - its a lot of radio for the money.

Hope this helps. Feel free to send me an email if you want more information.

I dont really live close to a military air base. I live in the Detroit,
Michigan area. Could I still be able to listen to military aviation like
airplanes in flight? My b/f is a Navy pilot. He is stationed at
Pensacola.

I would just like to listen to pilots and aircraft.

> that's easier to remember.

Let's put it this way. Some years ago, I quit going to Radio Shack because Even if I wanted to buy a couple AA batteries, I would have to give my name, address, telephone address, and other stuff EVERY single time. If I bought something on a corp account, I had to sign something like six forms, and the transaction took what seemed like forever.

I started going again because they eliminated that stupid idea.

But I can assure you, if I get prodded to buy a cellular phone every time I walk in the store, I'll stop buying anything there again.

The corporate suits who run the show are seriously misinformed about the shopping public. They will turn away business for the sales push.

The really interesting thing is that after the big cell phone push, which will drive the non-cell seeking public away, which means that the store sales will become mostly cellular, the suits will be convinced that their idea was right, because nobody will be buying anything else by then.

Remember the old "Jump Frog, Jump joke?

- Mike KB3EIA -

True, and I've been known to do that. My main bitch with the RS
stores I've run across in some communities where an actual outlet for
electronics parts has gone the way of the dodo such as the store in
Burlington Iowa where I used to reside until last spring.

I'd go in there looking for something, say pl259 connectors, and since
I"m a blind man i have trouble finding stuff in all those bubble
packs. SO I ask the employee. I tell him/her/it with no knowledge of
electronics that I do not want the crimp on connectors. WHen I arrive
at the house ... you guessed it.

I don't carry a cell phone but often carry a dual band handheld
transceiver with me. i"m not interested in a cellular phone. WHen
I"m away from my desk, I"m away from my desk and don't want to be
bothered by a damned incessantly ringing telephone thankyaverrymuch.
Hence, no cell phone for this old grouch.

Last summer I called the local rs store in Burlington to find out if
they had any transfer grease. THe little girl didn't know what it was
but could sell me all sorts of lube. FInally I grabbed a friend and
we went to the store anyway, but no transfer grease.

My worst gripe with RS is paying cash for something adn just wanting
to getr my purchase and walk out the door. IT's something small, a
connector or a crimping tool and I've still got to go through the
"what's your name and address bull***. Since you don't send me a
printed catalog anymore why bother getting my name and address? I
don't want a cell phone for a penny and I don'twant to give you my
name and address because I bought $8 worth of small parts.

I usually tell the sales droid that I don't even own a freakin'
television so why the hell would I want a direct-tv dish?
TV is one of the reasons we feed our kids dope pushed on them by
psychiatrists. iF we shoved 'em away from the box and sent 'em out to
do some physical activity maybe they wouldn't need the dope pushers in
the white coats pushing ritalin on 'em.

My favorite "trick" when they get pushy about satellite dishes...

First, I ask all kinds of questions that I already know the answers to, like what if there's a tree in my yard? How long of a cable run can I use from the dish before the picture starts getting fuzzy? (I really like that one... most don't have a clue. The pic doesn't get fuzzy.) Various things like that. Make 'em work for it, tho I do sound interested.

Let 'em talk me into a receiver for the bedroom, too. Go to the counter, they're drooling over the sale. Get to the point where they ask me for the credit card, in case of "early termination fee" is needed. Then I tell 'em I don't have a credit card; I do cash only. You can actually see their face fall.

To be honest, I don't do this much (at all) at RS. (Circuit City is much more fun.) The only thing I get from them is TV masting, cause I have a bit of theirs already. (Doesn't match the stuff from local the hardware store.)

Well you could hear any aircraft overhead or any major navigational
centers. Here in Maine we have no real commercial airports where I
live but I still hear boston center loud and clear(boston center is in
NH). As for military, Their operations usually involve 'hugging' the
bases, where planes stay real close and practice touch and goes.
Sometimes they will leave, but usually not too far. . he would have to
be within a few miles overhead. It would be really cool to hear
someone you know on the air from a plane. Even see the plane yur
hearing for that matter.

Why do you hate children? AFAIC blow the sirens all night
when a small child is missing! Young children need protection
and should not be near strangers, drugs, sex and violence!

My husband and I bought our nieces and nephew a FRS
radio and we had to take them away because a strange
man "offering candy" suddenly appeared on their frequency.
He even asked the kids where they lived! This is sick!

Hi!

I currently have a RS Pro-93 trunking scanner and I'm testing a DJ-X10. Due to its wider coverage and broadcast AM & FM I thought it would be a nice addition to the Pro-93.

However, I'm finding out that the broadcast AM is NOT there with the stock antenna and only passable with the RS whip #20-006A. I'm also having mediocre results on SW compared to my RS DX-398. In the other bands not covered by the Pro-93, there seems to be very little to listen to as well.

Is this due to my incompetence with the DJ-X10 or is this typical of wide band receivers? Where should I look to find more stuff not covered by the Pro-93?

Is the DJ-X2000 significantly better than the DJ-X10 when it comes to reception, especially broadcast AM and SW? What kind of antennas should I be using for MW and SW?

Should I just forget about the Alinco and stick with my Pro-93 and DX-398?

TIA,

YAK

Bullshit, you stupid fucking moron, lots of kids would like
sexual adventures and are kept from it cruelly and viciously!!
I was such a kid, and there are LOTS more! Probably yours!
Leave kids' sexual experiments the hell alone!

Just control the abductor/murderers whom you antisexual shitheads
create by threatening them with life in jail for touching a child!
You make it so they feel they HAVE to kill children!

>My husband and I bought our nieces and nephew a FRS

Untracable, so it's probably a user tired of fucking kids
dominating the damned limited FRS frequencies all the time!
I've heard of HAMs scaring off kids that way too. They have
a slang term for it.

7.5% Provincinal tax. Thanks to the Liberals. 7% goods & Services Tax. GST is federal. But the good thing is. people that don't make a fortune get a GST refund every 3 months. It is not lots, But it is better then nothing. Each province has their decision if they want the PST or not. Alberta just has GST. but rent and some stuf is more expensive.

Source record: 44193

Hello,

does anyone have a Panasonic KX-T9550-B cordless phone or know where I can get the instruction manual? I've already tried Panasonic but they never answer. My problem is that I need to set (configure) the clock of this phone to be able to use its answering machine. There is no obvious buttons for this so probably it's a function code or something. Since I've lost the manual I can not do this. So if anyone knows around these phones I'll appreciate the help! :)

Thanks
Phyz

2357. FS: PRO-2005

Newsgroup: rec.radio.scanner
Date: 2002-09-02 14:42:53 UTC
From: John LeMay <jlemay@njmc.com>
Message-ID: <pan.2002.09.02.14.42.52.844039@njmc.com>
Source record: 44196

Hi all,

I have a PRO-2005 in very nice condition for sale. It's the last of the old PRO's I have left (some of you may recall I sold off my two 2006's a while back). This scanner has been owned and used by me since I purchased it new right before the 2006's came out. It has all of the popular mods done and I just replaced the display a year and a half ago. I also replaced the oscillator with a 10 MHz crystal many years ago to bring the scanning speed up to about 29 ch/s. Basically, this 2005 will hold it's own against any 2006.

I thought I would post it here before I try ebay. I'm located in New Jersey and can provide digital pics if anyone is interested. I'm asking $220 including shipping to anywhere in the "lower 48". A quick search on ebay shows these have gone as high as $260, and most are in the $200 range (without shipping) Feel free to contact me with any specific questions or to make an offer.

thanks!

You know this is really true. My husband and I have some pocket radio frequency items because we have a big house and we talk to each other sometimes over it. Our neighbors who are young children have the same thing and the other night two of these little kids that have a crush on each other were talking on the radio. They started to talk about tons of personal information and I'm sure the whole town where I live knows about it now:) Debby S.<sarge500@infi.net>

Bob Parnass's help to me was well above and beyond the norm. He went
out of his way in sending me schematic and recommending the values of
capacitors to use. He is a credit to the industry and the newsgroups.
His expertise in these matters should not go unnoticed. he deserves a
big round of praise. Although I never met a bad one on these groups
his help exceeded my expectations and now provided me with more years
of listening on my vintage scanner. Thanks again and keep up the great
work. By the way his column is in Monitoring Times Magazine and has a
flurry of articles and help tips on his web site and all around the
web. Nick

2366. Aviation Scanner on CB Antenna

Date: 2002-09-02 16:09:54 UTC
From: Steve Danhof <stevedanhof@attbi.com>
Message-ID: <m3Mc9.172243$aA.34309@sccrnsc02>
Source record: 44105

I have a handheld Sportys SP200 Nav/Com than sends and receives between 118.000 MHz and 136.975 MHz and receives 137.000 MHz to 142.975 and 108.000 to 117.950 MHz.

I have a mobile Wilson 2000 CB antenna and some other base antenna at my house.

All I want to do is monitor these frequencies with the scan feature on my tranciever. I will not be transmitting at all while using these antennas.

Is this possible and safe for the radio?

Thanks for your help

Well, when you consider that ebay pulled an auction a guy had for 2 Regency VHF 150MHz business band linears (20 watts in - 80 watts out) because their policy against selling amps that might be used on CB (apparently they considered Regency to be a "CB" company!), I expect the mention of "telephone" in the header would be enough to trigger their knee-jerk reaction.

Certainly possible, and safe. CB antennas, however, are cut for
27MHz/11Meters, which is much lower than the frequencies you will be
monitoring. For receiving, this is not a real critical thing. Just don't
keep the radio connected to the outdoor antenna during storms, high winds,
or snowfalls...all of which can build up a charge on the antenna.

I have been told by several RS employees that while the print catalog
will not be issued, a CD-ROM based catalog will be available in the
stores. Several RS people have offered to burn me a copy of the CD,
which is probably against store policy. But for now, bring a blank
CD-R into the store and demand a copy; you'll probably get it.

Huh? Monitor any phone call you want? "telephone scanner?"

This is only a 512Mhz scanner. How can you listen to ANY phone call?
It can't receive 800 cell, only the older 49Mhz cordless phones.
"Retail value online $400 to $600" !!!!! Come on...get real. And yes
I do have my price police license.

Joke or not, well, that's not right. Why would you go through that hassle for a outdated piece of junk? Besides, it's possible he's not sure what he's selling.

I've always wondered if /why there were people that go to extremes to get something for free...you prove it in spades junior. Same as the people that write to companies to obtain free coupons because they have nothing better to do.

Small wonder the world is the way it is. (BTW, learn to spell...it's falsely)
Mike saddened by greediness

I use a Sony MZ-R37 mini-disc recorder with my scanner (a Uniden 780XLT). I get 2 hours of recording time on a disc when I record in monaural mode (which is what you have to do when you have the scanner plugged into the recorder). I've also used my PC to record stuff off the scanner using TrunkStar, I convert the WAV files created by TrunkStar to MP3 format afterwards to save space on my hard drive.

2387. Regarding EBAY's Scanner Policy (Please Read)

Newsgroup: rec.radio.scanner
Date: 2002-09-03 00:25:22 UTC
From: NJSCAN <njscan@lycos.com>
Message-ID: <plTc9.31494$NV6.1031370@news4.srv.hcvlny.cv.net>
Source record: 44127

The other day while reading through some USENET posts I ran across an account of what many scanner enthusiasts are experiencing on EBAY when trying to sell a scanner. I've removed some of the auction specific details which aren't pertinent.

"I put a scanner on ebay Sunday night. By the very next morning the reserve was met, and all was right in the world. Then today at lunch, I got this email from eBay: We regret to inform you that your eBay auction: 1xx630xx71 AOR AR1000XLT Wide Range Monitor has been ended. All fees associated with this auction have been credited to your account.

The item you have listed does not appear to be consistent with eBay guidelines. It is against eBay policy to list any scanning receiver or radio that
receives Cellular transmissions or has "800mz" coverage.

The person went on to say, "I did not say ANYTHING in my description about cellular transmissions, or 800 mhz coverage. I did say that it was a full coverage monitor, and no modifications were necessary. And, the picture of the scanner did show an 800mhz frequency on the LCD."

In response to this post, one person made the following suggestion.:

• If they see the frequency you are good as gone. Anything that even says 800 nowadays is gone. I have had many radios of mine booted cause of it. All I say now is "Canadian Model." If you take the chance again. Try saying euro model or something.

I believe EBAY's policy was very valid two years ago, when cellular communications were in analog mode. Today, most of the conversations have gone digital and there isn't much to listen to in that part of the 800 mhz band. While the law, prohibiting the sale of cellular capable scanners still exists, in many parts of the county it's now a meaningless law. EBAY's policy needs to be changed and I suggest that the scanner community take a few moments to send EBAY an E mail noting the following points.

a.. Explain that while the reception of cellular communications in a portion of the 800 mhz band is illegal, many public service agencies (that are perfectly legal to listen to) also utilize the 800 mhz frequencies. The mere fact that a scanner can receive frequencies in the 800 mhz portion of the band does not make it illegal, and should therefore not be excluded by EBAY's current policy.
b.. Explain that for scanners produced after the date the FCC's ruling regulates, the cellular part of 800 mhz is "locked out." The remaining portion of the 800 mhz band is enabled and in compliance of the current FCC law. This remaining portion is used by various public service agencies and

it's not illegal to monitor those frequencies.
c.. Explain that virtually all cellular telephone companies have now converted to digital modes which cannot be monitored, even if the scanner could receive the frequency being used.
d.. Explain that since scanner technology is advancing very fast, many hobbyists are upgrading their equipment and looking to sell off the old stuff. Excluding the sale of a scanner based on its ability to receive "800 mhz" is without merit and is probably costing EBAY a lot of lost sales.
e.. In concluding the letter, agree that any auction that specifically calls attention to the scanners ability to monitor "cellular frequencies" or "cellular communications" should be banned.

Keep the tone of your letter or E mail positive and don't make it sound like you are bashing EBAY.

Via snail mail your letter should be sent to :

eBay Inc.
2145 Hamilton Avenue
San Jose, California 95125

or via E mail you have to use the page at:

http://pages.ebay.com/help/basics/select-RS.html

The submission form on this page will require that you include an auction number. I used an auction number from any current auction running a scanner. The letter was prefaced by explaining that the number was only used to allow the E mail to be submitted for consideration. I urge everyone to do the same.

I'm posting this message in our local Scanner / SWL newsletter and I suggest any of you do the same.

c.. Explain that virtually all cellular telephone companies have now converted to digital modes which cannot be monitored, even if the scanner could receive the frequency being used.
d.. Explain that since scanner technology is advancing very fast, many hobbyists are upgrading their equipment and looking to sell off the old stuff. Excluding the sale of a scanner based on its ability to receive "800 mhz" is without merit and is probably costing EBAY a lot of lost sales.
e.. In concluding the letter, agree that any auction that specifically calls attention to the scanners ability to monitor "cellular frequencies" or "cellular communications" should be banned.

Keep the tone of your letter or E mail positive and don't make it sound like you are bashing EBAY.

Via snail mail your letter should be sent to :

eBay Inc.
2145 Hamilton Avenue
San Jose, California 95125

or via E mail you have to use the page at:

http://pages.ebay.com/help/basics/select-RS.html

The submission form on this page will require that you include an auction number. I used an auction number from any current auction running a scanner. The letter was prefaced by explaining that the number was only used to allow the E mail to be submitted for consideration. I urge everyone to do the same.

No your wrong. I only want to pound the shit out of you!
Are you into kids? Are you saying you were deprived sexual contact
in some manner with kids? Your a sick bastard.

2392. Regarding EBAY's policy

Newsgroup: rec.radio.scanner
Date: 2002-09-03 01:08:25 UTC
From: NJSCAN <njscan@lycos.com>
Message-ID: <6YTc9.32213$NV6.1058068@news4.srv.hcvlny.cv.net>
Source record: 44132

The other day while reading through some USENET posts I ran across an account of what many scanner enthusiasts are experiencing on EBAY when trying to sell a scanner. I've removed some of the auction specific details which aren't pertinent.

"I put a scanner on ebay Sunday night. By the very next morning the reserve was met, and all was right in the world. Then today at lunch, I got this email from eBay: We regret to inform you that your eBay auction: 1xx630xx71 AOR AR1000XLT Wide Range Monitor has been ended. All fees associated with this auction have been credited to your account.

The item you have listed does not appear to be consistent with eBay guidelines. It is against eBay policy to list any scanning receiver or radio that
receives Cellular transmissions or has "800mz" coverage.

The person went on to say, "I did not say ANYTHING in my description about cellular transmissions, or 800 mhz coverage. I did say that it was a full coverage monitor, and no modifications were necessary. And, the picture of the scanner did show an 800mhz frequency on the LCD."

In response to this post, one person made the following suggestion.:

• If they see the frequency you are good as gone. Anything that even says 800 nowadays is gone. I have had many radios of mine booted cause of it. All I say now is "Canadian Model." If you take the chance again. Try saying euro model or something.

I believe EBAY's policy was very valid two years ago, when cellular communications were in analog mode. Today, most of the conversations have gone digital and there isn't much to listen to in that part of the 800 mhz band. While the law, prohibiting the sale of cellular capable scanners still exists, in many parts of the county it's now a meaningless law. EBAY's policy needs to be changed and I suggest that the scanner community take a few moments to send EBAY an E mail noting the following points.

a.. Explain that while the reception of cellular communications in a portion of the 800 mhz band is illegal, many public service agencies (that are perfectly legal to listen to) also utilize the 800 mhz frequencies. The mere fact that a scanner can receive frequencies in the 800 mhz portion of the band does not make it illegal, and should therefore not be excluded by EBAY's current policy.
b.. Explain that for scanners produced after the date the FCC's ruling regulates, the cellular part of 800 mhz is "locked out." The remaining portion of the 800 mhz band is enabled and in compliance of the current FCC law. This remaining portion is used by various public service agencies and

it's not illegal to monitor those frequencies.
c.. Explain that virtually all cellular telephone companies have now converted to digital modes which cannot be monitored, even if the scanner could receive the frequency being used.
d.. Explain that since scanner technology is advancing very fast, many hobbyists are upgrading their equipment and looking to sell off the old stuff. Excluding the sale of a scanner based on its ability to receive "800 mhz" is without merit and is probably costing EBAY a lot of lost sales.
e.. In concluding the letter, agree that any auction that specifically calls attention to the scanners ability to monitor "cellular frequencies" or "cellular communications" should be banned.

Keep the tone of your letter or E mail positive and don't make it sound like you are bashing EBAY.

Via snail mail your letter should be sent to :

This sounds like the typical NAMBLA party line! Someone needs to to
keep an eye on guys who are so insistent that kids NEED or DESIRE their
sexual attentions. If I misread you, Steve, I am sorry; but your insistence
that sexual freedom extends to such lengths is more than a little scary!

I'm the guy who you are referring to in your post. That is very good advice you gave and if I ever decide to sell another scanner on ebay, I will follow your lead.
By the way - in retrospect, I'm actually glad ebay ended my auction. I've been piddling around with the AR1000xlt over the Labor Day weekend, and its not as complicated to operate as I originally thought. It does have that audio problem but even so, it is superior to the Uniden I was going to buy with the ebay money I thought I was going to get.

Ebay does not police anything themselves.

They respond ONLY to complaints from others.

If your auction was taken down, the only reason is because someone
complained.

Ebay does not have auction police, employees monitoring for violations
or anything. They are reactive only, not proactive.

The corporate counsel for ebay is a friend of mine. I have tried to
work with him on policies, mostly pertaining to electronic
surveillance equipment.

All the letters in the world will do no good.

Ebay feels, and I agree they are mistaken, that private sales of 800
meg capable equipment is not permitted. They don't listen to the
unwashed masses, they make a written inquiry of the FCC and get a
written reply. Of course, when you ask any government agency,
everything is illegal.

You won't do any good with letters or emails.

Yeah, I realize test equipment is defacto exempted. Don't try to make
them understand. It won't work. A letter agency said they didn't want
800 capable gear sold on ebay, and ebay is so visible they listen
rather than take any chances.

The loss of revenue from ten thousand auctions they kill would be down
in the noise level to them.

Your problem isn't the 800 coverage. It's most likely busybodies who
have nothing else to do but play ebay police and get a warm wet
feeling when they get someone's auction pulled.

However, the zombie at ebay, who is a low level person, receiving
these complaints doesn't know a megahertz from a microhenry. So don't
make it blatant and they may not be able to find evidence enough to
satisfy them of the need to kill the listing. They know enough to look
for keywords.

Thanks,
I know that should of been obvious, but I am new to the scanner hobby.
I printed out the parts list and am going to pay a visit to Radio Shack
tomorrow.

Thanks Again,

Sammy

Here's someone who wants to label everyone who doesn't believe as he
does a "pedophile" for his convenience. As I understand it, NAMBLA
likes sex between great big men and little tiny boys. Not interested.

>Someone needs to to
>keep an eye on guys who are so insistent that kids NEED or DESIRE their
>sexual attentions.

I agree, but just to make sure it is always actually consensual!
And NO MORE than that! You're forgetting about what KIDS might want.

You see, AS a kid I wanted sex with adults, and I was deprived of
that! As an adult I STILL want sex with adults, fat-assed 50 year-old
women with big tits and hairy butts.

So you see, NOT EVERYONE who wants kids to have the right to consent
to sex wants that because he wants to rape them!! Many of them were
kids themselves who wanted, and some of whom experienced, sex with
adults they desired. I know a LOT of them, they usually matured quite
early and were masturbating at 7 or 8. I know a spectacularly large
number of them now in the groupsex community, which they gravitate to.

>If I misread you, Steve, I am sorry; but your insistence
>that sexual freedom extends to such lengths is more than a little scary!
>Dan Morisseau

There's no reason that it should be. We're NOT the child-rapers of
the Amber Alert system's intent. We are uninterested in kids unless they
are interested in us. Even then if we did anything it would strictly be
as a favor to the kid because they're not that attractive sexually till
they get secondary sexual characteristics of some kind. Kind of cute is
all. We ourselves are interested in other fully sexual adults, alone

or in groups.

We also want kids (and everyone) to have the right to be nude, to see their peers and species nude up close and personal, for their own familiarization and interest, and to consent to sex with their peers as a form of play. Right now, in Amerika, and Europe is shocked at us, kids are being sent to youth-prisons as sexual offenders for playing doctor!! Merely for investigative play!! This nation has become VERY sexually sick, and it needs healing!
Steve

Your probably hearing a bunch of Brazilians who bootleg American UHF DOD satellite frequencies and use them like CB channels. They are on quite often in the evenings from about 260 to 267mhz and speak Portuguese, which sounds like Spanish with an Italian accent (at least to my ears). There seems to be a main guy who sells the high tech equipment to friends and they chat about travel, life and complain about the equipment not working. All at the expense of our US tax dollars!

I have tried to refrain from entering the fray, primarily because I felt you were simply trolling.

Your recent statements force me to believe you are sincere. That being the case, I can only conclude you are one sick puppy. You have indicated that either you personally, or a member(s) of your group have "as a favor to the children" engaged them in sex.

Believing a crime has been committed I have forwarded copies of all your posts to my local FBI office for investigation.

End of my input to your sordid thread.

Participate in a "radio watch" program? What are you going to do if your hear suspicious activity or something you don't like?
You don't have the means to find who is transmitting it and neither do most police depts.
You would be wasting my hard earned tax money clogging the 911 system, reporting voices on a license free, almost anything goes radio band that you cannot control.
If you give your small child an FRS radio to play with knowing all these things then don't cry with them when they hear bad stuff spouting out of the speaker. In my neighborhood all you hear on FRS is small kids conjuring up foul words that I have a hard time believing, and causing major interference to licensed GMRS operators on adjacent frequencies.

2406. Inherited a scanner

Newsgroup: rec.radio.scanner
Date: 2002-09-03 05:41:04 UTC

Message-ID: <967dde40.0209022141.76c08adc@posting.google.com>
Source record: 44146

All -

I recently inherited a Radio Shack PRO-23 (model 20-504A, date code 7A4) and I'm new to scanners, but would really like to make some use of it.

Some reading has led me to believe my local PD is using a 'trunked' system (or something to that effect), digital, as it were. I've gotten about as far as picking up the weather (sad, I know). I also discovered (even though I'm really not interested in it) that the keypad 2+9+lo trick doesn't drop me to 888 on channel 15. oh well.

Is there a good online resource for scanner frequencies in the Nashville area? Fire/Police would be best, of course. The idea of keeping up with trouble in the area seems like such a useful thing.

Thanks again for any resources you can direct me to online. I apologize for the newbie post, in any case.

If all you're doing is recieving, it can't hurt the radio.

As for recieving, you may get a little intermod since the antenna
isn';t tuned for air band, but you should be able to recieve just
fine.

Evan

Message-ID: <3D746876.899990D6@attglobal.net>
Source record: 44049

Absolutely untrue.
No ,ebay does not have "auction police employees" they have bots which scan adds looking for catch words which,in the case of scanners,are pretty obvious - unrestricted,full coverage,unblocked ect.
Once the bots return the results I imagine they do have a team of people who decide whether or not to cancel the add.
They will close down an auction with or without a complaint when they want to.
If they just relied on snitching twits to end auctions I'm sure the majority would never get cancelled,and ebay wouldn't have much of an excuse saying "ummm..no one told us ".
They would be charged with facilitating the sale of illegal equipment/items in a heartbeat if they made no effort whatsoever - like you say - to regulate what goes on at their site.
I don't know about your ebay bud but if he doesn't know about bots he isn't very well informed.

I have known people who had sex with those younger than 18, sure.
That's not illegal. Did you imagine it was, or were you just not actually
paying ATENTION to anything AFTER that!??

>Believing a crime has been committed I have forwarded copies of all your
>posts to my local FBI office for investigation.

And they will say a big ho-hum.

>End of my input to your sordid thread.

You had no "input", you're not capable of anything besides hall-monitor
behavior. Didn't you know why you were hated when you were a hall-monitor??

You see, you don't even realize when you're serving the Nazi's yourself!!
You think that turning in people for things they both enjoyed is "cool".
Everyone remotely LIKE you should be taken out and shot through the head!

Ah, the satisfaction in simple wisdom. Ecommerce is a trap, but the
clueless idiots that fall prey to it are just what the cashless
society is counting on.

I wrote a direct email offering a seller $50 more than his highest
final bid on a product once. It was really just an exercise to test my
theory on motives, but I would have honored my offer.

However, like I knew he would, the seller rejected it insisting that I
place an eBay bid and use Paypal like everyone else. See what I mean?

Ended without any bids. There's hope for humanity after all.

Listen to any telephone call you want? Sheesh, talk about false
advertising. Does that mean I can use it to listen to landline calls? What
if I wanted to listen to phone calls to/from the White House?

Press the WX button until you receive the channel for your area. There are two ways to set it to receive the alerts.

One is to set it to standby mode. While on the WX channel press FUNC - WX. To get out of standby mode press FUNC - WX again. You can't scan during this.

The second is to set the WX as priority. While on the WX channel press FUNC - PRI. This sets it as your priority channel. While scanning, turn priority on. When an alert is broadcast, you will receive it.

Hope this helps.

Mig

I would go with a 220-400 MHz band antenna. It doesn't have to be milair
which is just a code word for more expensive in scanner antennas. I use
a dual band 144/430 ham antenna with my receiver and it works great.

I fail to see the point you are making other than paying tribute to the integrity of the seller.

If I had done that as an experiment, and the seller rejected my offer, I would have gained a better view on society out of the deal.

What was your point?

Speaking of listening to the Whitehouse.... Do you remember the Newt
Gingrich call that was monitored by the scanner listeners in Florida? It
was one of the stepping stones to the ECPA that banned scanners made or
easily converted to monitor cellular (800 MHz analog). They must have had
one hell of a scanner to monitor from Florida a call that was made enroute
from DC to Georgia. Also, they must have had a professional tape recorder
at line level in their car to be able to turn out the studio quality
recording that made the news shows to bolster support for the ECPA.

Yes. But, as I have found out (and others are free to correct me) there
are many different types of MDTs, and each has its own programming to
decode.

But, to do it, you would have to tap the discriminator output of your
scanner. I have really thought about doing this, but requires a knowledge
of electronics I don't have. I'd be afraid of frying my scanner in an
attempt to solder anything.

Do a search and you should find plenty of info.

I was building cables this weekend, and the DIN connectors I bought from the old, established electronics supply house were junk. Shell halves barely stayed together, no numbering on the pins. All the DIN connectors I get from RS fit together nicely and have the pins numbered.

And my "cure" for the satellite / cell pitch? I'm there often enough looking for little piddly stuff that they know I'm not interested in anything that costs more than $5. :-)

Every single day, the cops are out there protecting you from people you hope you never ever get within 1000 yards of you. Some of these are people who would kill you for your comb... or because you didn't have one to steal... or just to watch you die. While the cops are protecting you from them, what's protecting the cops?

The death penalty for cop-killing isn't because they're special people, it's because they need special protection. For *your* safety, they live in circumstances that are *often* much worse than you ever want to live through *once*.

Not a cop, never want to be. They take entirely too much shit for too little money and get too little respect. Just glad there are people who still want that job.

It requires nowhere near the attention that an oncoming tornado, or
"8-alarm fire", requires. I promise you that child won't die just because
J. Random Citizen wasn't awakened from a sound sleep within ten minutes
of the child's abduction.

I also promise you that if you use weather alerts for non-weather purposes,
people will start to ignore the weather alerts, and that can cause people
to die.

Every 18 seconds, somewhere in the USA a child disappears. I can assure
you that after 54 seconds of this, my weather alert radio would go off
and never be turned on again. I doubt I'd be the only one doing that.

Listening to cell calls was banned before that. IIRC the couple was
prosecuted. Even before that, revealing the contents of non-broadcast
communications was prohibited by law.

No, it happened long after the ban on monitoring cellphones,
but the suspects were NEVER charged under the ECPA, they
were only charged under Florida STATE wiretapping charges.

You're not going to be able to follow trunked stuff with your
scanner easily, thought you may pick up fragments on the various
frequencies your system uses.

> Is there a good online resource for scanner frequencies in the

You make some very good points, and I don't disagree with anything you said. I have two very close friends that are police officers, one in Detroit, Michigan, and one in Phoenix, Arizona.

The point I was trying to make is that someone who murders ANYONE, should get the death penalty...not just when they kill a police officer. I don't see why we should be more understanding, compassionate, and forgiving, if they kill a six year old, little girl, or a ninety year old man. Taking a life, is taking a life, regardless of ones profession.

You can only do this using the WinScan-RS software. Out of the box, the 2052 cannot scan both conventional and trunked at the same time.

From: Lou <tech@dp.net>
Message-ID: <al3hlf$20q5$1@news.dp.net>
Source record: 44080

I don't have the original or follow up posts to refer to - listed herein, but the whole point I'm going to make, started around the use of the term "cripples" in a post.

We all make mistakes at one time or another. I know I went off on the poster in the NG who used that choice of word. Maybe too, we're all getting too easily offended by such things even when not meant in a bad way. Used to be, a lot of things could be said or done and no one gave a second thought to it. Now, major law suits are waged over some of the same things - even if not meant to cause harm. Political correctness. WOW, what a mess it can create.

After seeing an apparent apology for having made the statement as it was, I applaud him for being a man and stepping up to the plate to do so. I hope this can die now that it has apparently been settled. Again, my applause to the man to admit his error on the choice of word and apologizing to those who felt offended. If we could all admit our faults - learn from them and move on in a positive manner, this world "may" just become a better place to live.

Now, let's get back to the real subject......SCANNERS!

I sent a complaint to the Weather Service.

They replied:

This message was broadcast at the request of KCBS radio who is the
Emergency Broadcast affiliate for the greater San Francisco Bay Area.
They had transmitter problems and asked that we broadcast for them since
we are their official backup. Thus we complied with this request. We
are attempting to establish some guidelines for the use of NWR for AMBER
Alerts. This is a state operation and federal policy has not been
established. We hope to have better guidelines on this very soon.
Thanks for your comments.

2447. Radio Shack Pro-2041 programming help

Newsgroup: rec.radio.scanner
Date: 2002-09-04 01:00:03 UTC
From: bjp_14@firehousemail.com
Message-ID: <4544074e.0209031700.2365b498@posting.google.com>
Source record: 44087

I am trying to download programming to my Pro-2041 and I can't get it working. Based on info I've found on the newsgroup, I've been able to find out the following:

1. Connection cable is a DB9 to 1/8" trs with tip to pin 2, ring to pin 3 and sleeve to pin 5 (receive, send and shield, respectively). One post recommended a 1K resistor between pins 1 and 2 and another did not. I built a cable with the resistor for now.

2. com port settins are 2400 baud, no parity, 2 stop bits, send CR/LF, local echo

3. programming generally consists of a file with 1,144.000,nfm,D,L,comments or some shortened form for channel,frequency,band,delay,lock,comments

4. To get the scanner into programming mode, turn it on holding down 3 and Enter.

I did all this and I get the scanner to say "PC Connect", but I can't get beyond that. I think there is a character sequence that needs to be entered to get it to start accepting programming and go into "connect" mode. I saw the $999*F9 sequence in one post, but that didn't seem to work.

All of the web/ftp sites from the old posts don't work, so I'm out of places to look.

Any help would be appreciated.

-Brian

> of the child's abduction.

Let me start off by saying that I'm not so certain that the use of the NOAA WX channel is going to be particularly effective in solving such crimes, but given their seriousness I am willing to see if it won't help. The real problem is (as someone pointed out earlier) is that ordinary garden variety scanner can't handle the multiplicity of messages available in the SAME system. Leaving your scanner set on SAME is almost guaranteeing an untoward interruption of your sleep,

More significantly, however, is the issue of timeliness ("...within ten minutes of the child's abduction"). Statistics that I've seen quoted in news reports suggest that is the child is abducted by a stranger and is not found within five hours the chances are very high that the child has been murdered. Something to think about

Ditch the resistor. Not saying it won't work, but I never heard from
anybody who had it work for them. You also don't need the connection
to the tip.

[snip]
>All of the web/ftp sites from the old posts don't work, so I'm out of
>places to look.

http://members.cox.net/kplotkin/scanner.htm

That url should be good for some time to come.

If you're writing your own program, click on "64/2041 Programming
protocol".

load64 does not work on newer machines. I don't know if it's the
higher speed or if it's Win 98 and beyond. Bob Miller's wload64 works
well.

BTW, if you're writing a new program for the 2041 and want to share
it, I'll be happy to add it to the page.

Hi all,

Log Analyser version 1.7.2 is now available.

This release adds support for AOR's ARD2 decoder.

This is a free upgrade for registered users. A demo and the upgrade
can be downloaded from http://www.acarsonline.co.uk

Thanks,

Mark Avey

2459. tk120 v0.7 available, open source software for Yaesu VR-120

Newsgroup: rec.radio.scanner
Date: 2002-09-04 13:43:23 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d760e11$0$1425$272ea4a1@news.execpc.com>
Source record: 43949
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk120 version 0.7 is now ready for free download.

tk120 is an open source programming utility for the
Yaesu VR-120 portable receiver.
It runs on Linux, Windows, and (perhaps) MacOS X.

Improvements in version 0.7 include:

-The VR-120 supports "bandstacking," i.e., it remembers
the last VFO frequency used in each band.
tk120 v0.7 provides bandstacking memory frequency and mode
controls. You can redefine the band edges.
Bandstacking memory frequencies are validated to
make sure they are within the corresponding band.

-Added warning about 474 - 475 MHz blocked frequencies
for the USA version radio.

-Fixed bug which prevented changes to bit flags 1A14 Bit 0
and 1A14 Bit 1 from updating the memory image.

You can learn about and download a beta test version of tk120
from my web site:

http://parnass.com

Thanks to Russell Hall, Gary Kinsman, and Torsten Grochowski for
testing tk120. Jim Vincent, KC7RYD, and others helped by
sending me image files from their VR-120s.

I don't warrant the software, though it will cost you nothing.

>I have to agree! -Janice

And you will, till you, or your son, or husband, winds up killing someone
in what SEEMED to you for the world like self-defense at the time, but
which is being played as all sorts of other things to a jury, and by a
prosecutor who wants to be governor REAL FUCKING BAD, and you're in the
cross-hairs of the lethal injection or life in prison and you know you
didn't do wrong! Then you'll realize that only political crimes deserve
death, because you can always just NOT do them with impunity, but criminal
crimes can be a matter of complete and utter happenstance!!

What SHOULD carry the death penalty? Embezzlement from the People, misdeeds
with the public's trust, crimes of greed, lying to the public for money or
power! Those things are done, cynically, calculatedly, and when they know
better and have the time to think about them first! THOSE deserve the death
penalty, because when they can THINK about it first is WHEN DETERRENCE
WORKS!

The rest of the things people do are in the heat of the moment or under
the influence, or when they are insane or desperate or frightened, and
NO ONE should EVER be killed for those things, because death won't prevent
them!
Steve

Radio-scanner.co.uk - September Newsletter

Welcome back to the regular updates, the site has changed again as most people knows. The site now operates with facilities for everyone to send articles, reviews and news to the site and become a true part of radio-scanner.co.uk

The site has now received 349,618 hits since the site started last february, which is over 10,000 visitors per week, growing quickly. I have also arranged some fairly unintrusive advertising on the website which covers server costs, and if it makes enough money I hope to be able to upgrade the servers and the site software to a much more professional standard and be able to offer regular competitions so fingers crossed.

In a previous post... [imagine dreamy harp runs here]

The Weather Service replied:
This message was broadcast at the request of KCBS radio who is the
Emergency Broadcast affiliate for the greater San Francisco Bay Area.
They had transmitter problems and asked that we broadcast for them since
we are their official backup. Thus we complied with this request. We
are attempting to establish some guidelines for the use of NWR for AMBER
Alerts. This is a state operation and federal policy has not been
established. We hope to have better guidelines on this very soon.
Thanks for your comments.

David Reynolds
Meteorologist in Charge

It's not that the Amber Alert is an inherently buggy thing; it's that the
radio stations will sometimes have technical difficulties in trying to get
out these alerts, and that guidelines haven't been set because it's so darn
new! Lets have the powers that be put some thought into setting guidelines
and then all the "bugs" will be worked out.

John

Hello,

If you are interested in searching for fixed / mobile or microwave radio frequencies licensed in Canadian, you may find the theme "Canadian Spectrum Direct", which is hosted at http://publicgis.com, of some use. (When you have visited publicgis.com, select "Open Theme", then "Canadian Spectrum Direct ". A box will appear on the left side of the page, from which you can operate to query, see results, map, etc. Greyed out options within the box indicate a lack of permissions.)

As hosted by publicgis.com, the "Canadian Spectrum Direct" theme consists of 276,411 records compiled from Industry Canada's Technical and Administrative Frequency Lists (TAFL) (as of Sep 1, 2002).

You do not need to login to publicgis.com to query this theme; the default PUBLIC account offers query and view access.

Industry Canada offers a similar query service (accessible from http://strategis.ic.gc.ca/SSG/sf05303e.html), but compared to publicgis.com, is limited in the following ways:
- potentially much slower when querying by latitude and longitude,
- more restricted query conditions,
- no graphical mapping of query results,
- no update feature,
- no security or authentication (to manage who performs update).

publicgis.com is a web site that hosts the PublicGIS spatial information system. I am interested in hosting other kinds of spatial information (ie. information with a location component) at publicgis.com for you to query or add to. I plan to offer the US FCC ULS database, which is comparable in content to the Canadian TAFL, except of course pertains to the United States, and is much, much larger in size.

Please understand that as this is a largely volunteer effort, publicgis.com may be offline from time to time.

Thank you.

Kevin Macdonald

So, what you're sayin John wayne G., I mean Richard Steven Waltz is that you were sick way back as a child and perhaps born a pedophile. Maybe your parents were too. Sooner or later you'll end up in jail. One of your "willing" kids could be sick like you were and then turn you in to the cops. You'd be put away for a long time (but not long enough because the prisons are full as a result of softness on crime).
Yeah sure, you're right and the world is wrong. You need help to re-adjust your thinking before some parent or inmate re-arranges your face and puts your lights out.

Fred you are a hero. I'm glad to hear someone has the balls to be a leader and not a follower of sick minded people like Richard Steven Walz. I'm so glad he felt like telling his sickness and now the authorities can step in.

Support for the Yaesu VR-5000 receiver is being developed for FTBasic, a CAT control program by G4HFQ.

An operational development preview is available for download at http://www.g4hfq.co.uk

Go to the Download page and look for ftbdev.exe towards the end of the page.

You have that delusion again, that anyone who has three names you learn to use because you saw or heard them on a screen somewhere must surely be a criminal. You're such a little sickie that you can't even think straight!

>is that you were sick way back as a child and perhaps born a pedophile.

You're fucking deluded, there is no such thing. True dangerous pedophiles are made by abusive fundy parents like YOU!!

>Maybe your parents were too.

And how do you justify any of this again?? You're a fucking LOONEY-TUNE, my parents were more harmless than anyone I've met since!

>Sooner or later you'll end up in jail.

You mean that even though I'm 52 and have no criminal record that you're simply sure of this, and why? You're as I said, a fucking LOONEY-TUNE!!

>One of your "willing" kids

MY "willing kids"? I don't HAVE any! I simply WAS one as a pre-pubescent child! Why does this confuse the shit out of you till you get nervous and twitchy? Were you beaten and shamed for PLAYING WITH YOUR CLIT? Is THAT what makes little sick fundies like you attack anything or anyone sexual? It sure the fuck is!!

> could be sick like you were and then turn you in to the cops.

Once again, you're mistaking a child who innocently just felt that sex was fun to be where murderous pedophiles come from, and nothing is further from the truth! The real sexuality of young humans is hidden from you by your society so YOU imagine that surely the ONLY sexual activity that kids get is being raped and murdered, and WHY? JUST because those are the ONLY sexual events related to children that you GET TO HEAR about!! But of course that's a circular position, because with the ignorant WITCHHUNT that abounds in Amerika regarding sex, you HAVE GUARANTEED that rape-murder of a few kids is the ONLY form of sex with kids that you EVER WILL hear about, and THAT'S because it's JUST NOT SAFE to tell you fucking freaks about the REAL sexual adventures of kids who enjoy it in the MILLIONS!! And if you

don't BELIEVE that, go read KINSEY and his interviews and surveys of adults recalling their youthful sexual escapades with teens and adults, you'll find that there are three or four TIMES the number of kids who ENJOYED sex with older teens or adults compared to those who didn't LIKE what happened!! Read it, you ignorant fucking fundy BITCH!!

>You'd be put away for a long time (but not long enough because the prisons
>are full as a result of softness on crime).

Oh, THAT makes a WHOLE lot of sense!! Lessee, the prisons are full because we're soft on crime?? You're nothing but an erratic abused little fucking FUNDY LOONEY-TUNE!

>Yeah sure, you're right and the world is wrong. You need help to re-adjust
>your thinking before some parent or inmate re-arranges your face and puts
>your lights out.

You'd love to try yourself. Come and try it and die, bitch! You fucking antisexual fundy bigoted coward!! I didn't get to be 52 with no record by being stupid or by DIS-satisfying ANY of my sex partners!! And there are TENS of MILLIONS of people JUST LIKE ME who know that people like you are as crazy as bed-bugs!!
Steve

How long will we have to WAIT for these "authorities" to "step in"!
Dumb deluded bitch, they aren't here YET and from experience with the
dozens of cretins like you who have claimed that over the eyars, we know
THEY NEVER WILL EITHER!!! You fucking FUNDY LOONEY-TUNE!

At NASCAR races, I can always pickup the TV broadcast audio on my scanner.

I also attend a number of college football games, but why can I not find the ESPN audio on my scanner there? Do they handle things differently at stadiums versus racing?

At this point I'm assuming it's all hardwired.

Thanks.

Not to jump on the wagon in the middle of a conversation, but what exactly are you talking about? ANYONE can go down to their local store and BUY a weather radio. They are not that expensive... There are nearly 50 at my local Wal-Mart currently on clearance.

The only reason a small percentage of people have ["access to"] them, is because people are just too damn cheap to fork over the dough for something that might actually have some use to them... What's your excuse?

Try http://www.webdeals.net/kd4lyp.html - supposedly info on Sevier Co, TN -
may have something for you...

or try the Radio Scanner WebRing - a Google search oughta find it.
Many many websites for scanning, should be something there for you.

Ok. I'll first start by saying that I have just downloaded all of the posts in these two newsgroups and still can't find the answer I'm looking for. I have a PRO2006 scanner with the OS456 interface on it. I am looking to download and use the TRUNKER program to monitor a TYPE II system here in the Houston area.

I can't find enough information on getting this setup. Is there anyone that can direct me to a link that will help me out. I have heard that a lot of people have had problems getting this setup in the past.

Thanks for any help in advance.

--> My reply to what Ken Jones wrote 9/5/02 6:13:35 PM

are you going to use a second scanner with discriminator tap to feed your
fsk decoder and your Pro-2006 with the opto board to listen to what you find?

I will try to help you if I can, drop me a e-mail and tell me what you are
looking at doing. I am using two Pro-2006 scanners and could send you the
setup file but would need to know the com port and com port speed of each
of the two you are going to use.

This is the same thing eBay was doing a year or two ago in the diecast
car auctions. Racing Champions had issued a DARE diecast car without
the blessing of D.A.R.E. So everytime an auction was posted that
showed the car or mentioned DARE, it was cancelled within a few hours.

The bonus would be, if you were watching the auction you'd already have the
buyers email address. Then you get the benefit of advertising on ebay,
without having to pay any fees.

Trunker requires 2 receivers to make it track and monitor a system. One radio monitors the current Data Channel of the system in question. This can be any radio capable of hearing the freqs in use by the system (800, 900, UHF or VHF). The only modification this radio requires is that a discriminator tap be provided and connected to the serial port of the computer.

The second radio must be of a type that can be controlled by the computer's serial port. The OS456 can be this radio, as can the OptoCom, several AOR scanners including the AR8000 and AR8200, an R7000 or even a BC245 or BC780.

One may use a single serial port with a specially built cable or 2 serial ports, depending on the OS of the computer and availability of ports.

While I use Trunker all the time (It is always running here) I might suggest that you might consider the BC780XLT. This is the only commercially available scanner radio that can monitor a trunked system using only the current data channel. While it won't give you all the info that Trunker provides it is a great way to figure out the system freqs.

Ummm I think the UK in scotukmillair and the "cheers" at the end kind of give it away but yeah you'd think the dim wit would have clarified that little point in the first place.

As I mentioned before, if you want to use the Opto in the Pro-2006 I can give you the configuration files you will need but I meant to and forgot to mention I do have some Pro-2053 / Pro-93 files for the Houston area if you happen to have either of these scanners. I think I may also have a Pro-92 file for the area.

---------- Original Message -----------

I am looking to
download and use the TRUNKER program to monitor a TYPE II system here in the Houston area.

You may be able to do this with the BUTEL
<http://www.digital-laboratory.de/> OR
<http://www.butel.nl/> software "ARC 2 for ICOM R-2" and/or
with keyboard tricks. Look over the manual to see if returning
to the 10 kHz steps from European 9 KHz steps is possible.

for sale:

NEW in box, pro 93 trunktracking scanner with all accessories that
come with it.

this is version 1.0 and i have found no bugs with this radio. It is
more stable than the 245xlt i use to have, and the pro 92b that i
do have.

it comes with winscan software and computer cable for programming.

199.00US includes the express insured shipping with a tracking number

thanks

How do you know all this if the radio is "NEW in box"???
Let me guess. The ever popular "I bought the radio, and only took it out of the box to see if it worked." This is a strange phenomenon found most often on eBay. People buy radios only to take them home and test them, and then sell them for a loss.

....And there are no version 1.0's without the text bug.

Five hours -- indeed, thirty minutes -- is more than enough to blitz the
media and get every radio and TV station broadcasting the alert.

Well, Ctcss will just prevent you from hearing all but your specific
traffic. Take a look at some of the smaller ham dualbanders. Pretty broad
coverage, ctcss built in, and if you get your license some day you'll
already have a radio. It's what I did, always used a radio made for vhf to
scan vhf, a lot more sensitive than an all bander.

Frequency Range RX: 0.5 - 1.7MHz (�BC BAND�), 76 - 108MHz (�FM�), 108 - 137MHz (�AIR�), 137 - 170MHz (�V-HAM�), 170 - 222MHz (�VHF TV�), 222 - 420MHz (�ACT 1� � Action Band 1), 420 - 470MHz (�U-HAM�), 470 - 800MHz (�UHF-TV�), 800 - 999MHz (�ACT 2� � cellular blocked)

Well, all the above coverage, small size, and a cost of $129 bucks aint so bad in my book. But then, I havent been scanner shopping in years.

2519. Pro-2042 Schematic

Newsgroup: rec.radio.scanner
Date: 2002-09-07 00:07:04 UTC
From: Ralph <nospam@myspam.xxx>
Message-ID: <Iqbe9.15270$Pa7.3819193480@newssvr11.news.prodigy.com>
Source record: 44009

Does anyone have the service manual or at least the schematic for the
pro-2042?
I went to order one today and rat shaft says they are no longer available!
I'll pay for your time and cost to copy if you have it.

Thanks Much,

Ralph

One, that's not true, John provides service to many from elsewhere who may
once have lived here or others he has met in a remote capacity.

And two, regarding me, John doesn't care, being a freedom of speech
extremist. My antics seem to delight him just to have someone so colorful.

The one where the 1.00 firmware uses an 8 bit counter - which goes from 0 to 255 - to keep track of the text tags in 300 channels.

I can't do modulus 30 arithmetic in my head, but in decimal terms the text tags for the first 44 channels and the last 44 channels share the same address space and will overwrite each other.

This bug has been thoroughly documented (see discussions at the Yahoo! PRO-93 group) and recognized by Radio Shack as a manufacturing defect. All version 1.00 radios have it. Later versions do not.

But I'm kind of wondering...since your radio is "new in box" when would you have had the opportunity to see this bug in action?

Here are a few details of interest those not familiar with this radio:

1. It lists for $249.99, and has a history of going on sale for under $200.

2. If you have a Version 1.00 that is under warranty, Radio Shack will fix the text bug for free.

3. RS does not make an interface cable for the PRO-93, but it's the same as for the PRO-92, now discontinued. All interface cables for this radio are third party or home made. There are some excellent varieties of both: see http://www.pro-92.com/pcifcable.htm for a rundown. When buying a cable from someone, you have to check whether it's a full two-way cable or just one-way. One-way cables are definitely inferior.

4. The preferred software - by a huge margin over any of the others - is a free download from http://www.starrsoft.com/freeware/Win93/

Does that require or need a 2 level or 4 level FSK decoder for ACARS?

---------- Original Message -----------

i'm using PDW! it decodes : POCSAG/FLEX/ACARS/MOBITEX/ERMES

using either serial interface or soundcard (for the soundcard, only pocsag,
flex, and acars is decoded)

Be sure to keep in mind when shopping around that the OPP have begun
moving to the new province-wide Astro system, so depending on where you
live, your need to monitor the OPP with CTCSS will not last more than a
year or two at most.

Offhand I would say I doubt if the Iraq's transmit very much as they've learned that they get 500 pound bombs dropped on their heads when they do.
Combine that with the fact that doubtless any comms they do have would obviously not be in the clear - unless perhaps they were reduced to using Uniden family radios to communicate - and on top of that you would have to understand arabic and you'll understand why Iraq comms are not quite at the top of the list for your average mill com enthusiast.

Or perhaps your referring to the allied forces in the area - which seem destined to vastly increase in the near future.
Once again,encryption and advanced com methods would most likely take the fun out of monitoring that area - though if you were in the vicinity I wouldn't be suprised if there was a certain amount of in the clear tactical stuff to monitor.

I have a question on coax, which coax is best for a scanner. Using a discone on the roof I will be dropping a line to my den feeding a Yeasu vr5000. I have been told that rg-58 is fine, but then have also been told rg-8 or rg-6u is better. Total length will not exceed 60 feet. Which is it? tia

depends on what you're interested in listening to. i use rg 58 as
ground wire, finding it has little utility otherwise. it has poor
shielding, so if you use computers in your shack, you're gonna hear
'em on your radio. it has high loss, so if you listen to freqs higher
than 15 mhz it'll be a compromise. it's hard to solder since it's so
thin. rg8 is much, much better.

To find out who 'wf3h' is, go to 'qrz.com'
and enter 'wf3h' in the field.

my email is wf3h@ptd.net

If you don't have to don't use RG-58. RG-58 is good for short jumpers
but that is about all I use it for. Currently I'm using RG-8/U which
is good (have several antennas from verticals to beams). But am
currently switching all my VHF/UHF scanners (monitor MilAir 225-400 MHz
99% of the time) from RG-8/U to RF-9913 which is just a bit less loss
than RG-8/U

You can get RF-9913 with or without connectors at http://www.radio-ware.com/

And that's for the same reason they shouldn't be announcing missing kids
on the weather band.

> > I also promise you that if you use weather alerts for non-weather purposes,
> > people will start to ignore the weather alerts, and that can cause people
> > to die.
>
> Explain please. Because only a small percent of the population
> have access to the weather radios.

There are programs giving weather alert radios to schools now. The schools
can get warning of oncoming weather much sooner that way than they can by
waiting for a phone call from the PSAP. That five or ten minutes can mean
the difference between everybody being in the safe area, and hallways full
of waddling kids and flying debris.

I'm a heavy sleeper who lives a long way from the sirens. An alert radio
will wake me up for an emergency; without it, I sleep through it until it
wrecks my house.

You can find the "loss" of various cable types in a variety of
places. The loss increases with frequency and with cable length.

Generally, RG-58 has relatively high losses especially at UHF
frequencies.

"Cost" is another issue. I have a discone for receiving only
on which I use surplus RG-6 from the cable company. Works
great. In fact, at my QTH, the problem is generally signals
being too strong (overload, intermod, etc).

I have another discone I use for both transmitting and receiving.
It uses RG-8.

By best, you did not indicate whether loss, cost, or whatever
is your criteria.

For general scanning, I suggest RG-6 cable readily available
and inexpensive.

Hello. I'm buying my first scanner and found a factory reconditioned Sony WaveHawk portable RF scanner, (ICF-SC1PC) for $189.00. It's originl Manufacturers Suggested retail price was over four hundred dollars.
It's actually more than I was hoping to spend (I know I'm cheaping out), but it seemed like a good deal and generally Sony products are great.
I need full access to 512MHz to 870MHz for my work with wireless microphones and want as unlimited use of everything else as possible, all though I don't think I'm interested in the cell phone bands (isn't it all digital anyway, now?.)
I would appreciate a response from anyone how knows the Wave Hawk scanner, or any recommendation of a low cost scanner, or a way to get a good scanner for a low cost. Thanks much.

It is an absolutely SUPER scanner, great audio and excellent
sensitivity. I use mine all the time. Difficult to program without the
computer interface. Unless you are getting a warranty, the price seems
steep, I have seen them on Ebay for $125 or so.
I put away a spare in case mine breaks down, cause it is really a
great scanner,a s long as you don't need trunking

When buying "shit", cost always is the answer if you don't want to run
it again. Yeah, right.

Rg-6 is vastly superior to rg-8 for vhf/uhf scanning. RG-8 would be
close to the bottom of the list for vhf/uhf use. GerogeF passes on
more bad advise. The guy is clueless and a fraud.

I have to ask. Where did you buy your RG-8?

The uniden scanner is only able to decode APCO p-25 digital..motorola.
in vancouver bc the GE/Errison edac WAR digital system is use by
police/fire....it is not APCO-p25
here is a copy of a letter I received from uniden awhile back regarding digital
scanners.

Dear Jay,

Developing the technology for monitoring digital systems is very expensive.
In order for it to be profitable there must be mass deployment of that
specific protocol into the marketplace in order for Uniden sell scanners for
that protocol.

The EDAC Digital System is not widely deployed at this time. Uniden is
watching its growth and once it has reached critical mass, Uniden will
develop the technology that will allow you to monitor it. However, it
currently appears to be several years before critical mass.

Respectfully,

Scott Carpenter
Bearcat Product Manager

Subject: digital police scanner

Hi there
In my community we are using a GE/Erricson edac digtal system for police
fire communication
I understand that the new BC250D is only good for APCO25 digital
Is there a chance that a similar unit is produced to to receive edac
digital as we may not be able to receive digital transmissions using the BC250D
.

I am looking for opinions on the Yeasu VR500.
I had one of the first ones out and got rid of it in a month because the cross mod and rejection was horrendous,it was deaf as a post unless you used a frequency specific ant. and even then it could not nearly keep up with my AOR8000 in about all respects.
I have heard they have improved them and looking for comments....thanks

As far as I have seen, they haven't really changed much, if at all. I
got rid of mine after a few days, it was a mess, a local Police dept
could be heard all over the place. It was the second worst radio I ever
had, only the awful Bearcat BC8500 had worse Intermod..

Glenn:
If you're going to slander me at least spell my name correctly. It's GeorgeF. not GerogeF as you stated.

I never said anything about RG-6 (good or bad) so I don't know why Glenn is slinging mud at me over RG6. But Glenn's statement "Rg-6 is vastly superior to rg-8 for vhf/uhf scanning" is very misleading. When most people refer to RG8 they are referring to RG-8/U. RG-8/U is far BETTER than RG 6. There is another type of RG8 called RG-8X. Now that stuff is junk rated at 7.8 dB loss per 100' at 400 MHz (that's a lot of loss!). However not many people talk about RG-8X especially for runs of more than a few feet..

RG-8/U has a loss of about 2.8 dB per 100' at 400 MHz (can't find my chart containing RG-8/U, but that is from memory). Now I do have charts containing the other types discussed. RG-6 has 4.3 dB loss per 100' at 400 MHz (nearly double that of RG-8/U). And RF-9913 (which is what I was saying to be the better choice in the post where Glenn slung mud at) is rated at 2.6 dB loss per 100' at 400 MHz.

Now here is something for you to chew on Glenn. You kept hassling me over what antenna I was comparing the AntennaWarehouse Scanner Beam to. Well about 2 months ago I bought the $300.00 Create Log Periodic, put it on the same pole as the Scanner Beam was on. Same height and same coax. Guess what, in the 900 MHz range the AntennaWarehouse Scanner Beam was BETTER!!! Not just a little but a lot!

In the VHF bands the Create was slightly better and in the MilAir Bands it was nearly a draw. In the MilAir bands the Create had a very slight

edge but not across the entire band. Above 300 MHz it was a dead even draw....

The Create was a lot more directional, no question. In fact so directional it's a pain when trying to monitor a moving target at great distance. The Antenna Warehouse Scanner Beam has forward gain (in the MilAir Bands) nearly equal to the Create but the Scanner Beam has a more broad pattern making it nicer for most listening.

If you're just trying to hit a 2 meter or 440 MHz repeater at great distance the Create would be a better option (but only by a very small margin) only because you're not trying to receive a moving target.

In fact I've considered on taking down the Create and putting the scanner beam back up as there is no real difference in gain which you can hear on a wide range of scanners. Tests were done on the following: BC 780, PRO-2035, PRO-2006, PRO-2052, PRO-26. 900 MHz testing (which the scanner beam was far better) was done on the BC780, PRO-2052, and PRO-94.

I think your memory is bad.

In fact, here's a chart of coax loss, from
http://www.radio-ware.com/products/techinfo/coaxloss.htm

Coax Cable Signal Loss (Attenuation) in dB per 100ft*
Loss* RG-174 RG-58 RG-8X RG-213 RG-6 RG-11 RF-9914 RF-9913
1MHz 1.9dB 0. 4dB 0.5dB 0.2dB 0.2dB 0.2dB 0.3dB 0.2dB
10MHz 3.3dB 1.4dB 1.0dB 0.6dB 0.6dB 0.4dB 0.5dB 0.4dB
50MHz 6.6dB 3.3dB 2.5dB 1.6dB 1.4dB 1.0dB 1.1dB 0.9dB
100MHz 8.9dB 4.9dB 3.6dB 2.2dB 2.0dB 1.6dB 1.5dB 1.4dB
200MHz 11.9dB 7.3dB 5.4dB 3.3dB 2.8dB 2.3dB 2.0dB 1.8dB
400MHz 17.3 B 11.2dB 7.9dB 4.8dB 4.3dB 3.5dB 2.9dB 2.6dB
700MHz 26.0dB 16.9dB 11.0dB 6.6dB 5.6dB 4.7dB 3.8dB 3.6dB
900MHz 27.9 B 20.1dB 12.6dB 7.7dB 6.0dB 5.4dB 4.9dB 4.2dB

So, RG8X has almost twice the loss of RG6 at 400mhz.

>Now here is something for you to chew on Glenn.

I don't think being confrontational is a good idea,
until you KNOW you're right.

as you can obviously tell here, I'm new at this game. This is a new hobbie I'm trying out. I was under the impression that I needed to stay with a 50 ohm coax for the scanner versus the 75 ohm coax (rg-6) that I still have a shit load laying around here from my dss installation. I bought a 500 ft spool of rg6qs from home depot, used a little less than 400 feet. I was thinking the difference in resistance and capacitance would make a difference with the reception, NO? I take it I should just be concerned with loss/foot.

The Sony is a great scanner if you don't need trunking. The mod to get all
the 800mhz to 900mhz is very hard to do but worth the effort. It is quite
nice to know that you can tune in everything between 25mhz and 1300mhz
Shop around, you can find them for less than $189.00, try Ebay.

Well, since the text tag bug has nothing to do with trunking, you're
resorting to gibberish.

Next time try a henweigh.

Check Again! The table you included was the VERY table I was quoting
my numbers from. Again, I said RG-8/U is what I didn't have, RG-8/U is
NOT on the table you included, RG-8X IS on the table. There is a HUGE
difference in RG-8X and RG-8/U..... Look again....

The VR500 I owned had major problem with the display not showing numbers but question marks (and flashing) that needed a full reset - after having it relaced the same problem happened as well as not having any audio - a full refund and I spent some of the money on a Bearcat 3000.

av8tor@licensed4fun.com says...

> Glenn:
> If you're going to slander me at least spell my name correctly. It's
> GeorgeF. not GerogeF as you stated.

So if history repeats itself, this is where GeorgeF calls my house,
threatens me with a lawsuit and then makes a remark about my wife and
hangs up. Did I get that right GeorgeF?

Nobody can slander an idiot George.

> I never said anything about RG-6 (good or bad) so I don't know why Glenn
> is slinging mud at me over RG6. But Glenn's statement "Rg-6 is vastly

> loss!). However not many people talk about RG-8X especially for runs of
> more than a few feet..

Rg-6 is vastly superior to rg-8 for vhf/uhf scanning George. You don't
have a clue, as usual.

> RG-8/U has a loss of about 2.8 dB per 100' at 400 MHz (can't find my
> chart containing RG-8/U, but that is from memory).

Utter bullshit George. It is around twice that. RG213 ring a bell
dummy?

> Now I do have
> charts containing the other types discussed. RG-6 has 4.3 dB loss per
> 100' at 400 MHz (nearly double that of RG-8/U).

Pure nonsense George. RG-8/u has a higher loss than RG-6, period. You
are talking out of your ass again.

> And RF-9913 (which is
> what I was saying to be the better choice in the post where Glenn slung
> mud at) is rated at 2.6 dB loss per 100' at 400 MHz.

Actually LMR-400 would have been a better choice than 9913. In most
cases RG-6 would be the only cable ever needed. What does George know?
You claim RG8/U is within .2 db loss of 9913. What an idiot!

> Now here is something for you to chew on Glenn. You kept hassling me
> over what antenna I was comparing the AntennaWarehouse Scanner Beam to.

> Well about 2 months ago I bought the $300.00 Create Log Periodic, put
> it on the same pole as the Scanner Beam was on. Same height and same
> coax. Guess what, in the 900 MHz range the AntennaWarehouse Scanner
> Beam was BETTER!!! Not just a little but a lot!

I am sure this testing was done as carefully as your coax selection
and as accurate as your coaxial advise. In all reality George, a
discone put as high as possible with good coax and not your bullshit
RG8/U will hear most all of the signals you do now.

> In the VHF bands the Create was slightly better and in the MilAir Bands
> it was nearly a draw. In the MilAir bands the Create had a very slight
> edge but not across the entire band. Above 300 MHz it was a dead even

> directional it's a pain when trying to monitor a moving target at great
> distance. The Antenna Warehouse Scanner Beam has forward gain (in the
> MilAir Bands) nearly equal to the Create but the Scanner Beam has a more
> broad pattern making it nicer for most listening.

What did you expect you idiot? You are comparing apples to oranges.
The Scanner Beam is a TV antenna that you shill for AntennaWarehouse.
As far as gain, you are talking out you ass again. What are you using
to measure gain George? How are you measuring gain George? By ear?

> If you're just trying to hit a 2 meter or 440 MHz repeater at great
> distance the Create would be a better option (but only by a very small
> margin) only because you're not trying to receive a moving target.

How do you compare antennas with a moving target George? You don't
even have a legitimate point of reference do you? More George bullshit
and nonsense.

> In fact I've considered on taking down the Create and putting the
> scanner beam back up as there is no real difference in gain which you
> can hear on a wide range of scanners. Tests were done on the following:
> BC 780, PRO-2035, PRO-2006, PRO-2052, PRO-26. 900 MHz testing (which
> the scanner beam was far better) was done on the BC780, PRO-2052, and
> PRO-94.

So for $300 dollars George learned that 3 db is about one S-Unit. What
did you expect when most of your problem is the operator and his lack
of knowledge and skills.

Maybe you aren't a fraud George, you might just be an idiot that
doesn't know better.

2579. Re: Should I buy the Sony WaveHawk ICF-SC1PC?

Newsgroup: rec.radio.scanner

Source record: 43919

Gabriel,

I'm sure you know that there are 2 variations of the Wavehawk, the difference being that one can be computer controlled and the other cannot. It's a good Sony product but it is one of the worst scanners to program - absolutely non-intuitive and completely different from the RS, Uniden or AOR scanners. My second complaint is that it is subject to way too may images - at least that what i think it is. I pick up commercial FM and TV stations all across the 225-400 MHz band and its a real nuisance. That would not be a problem if you programmed frequencies into memory as opposed to searching. When Sony started clearing them out you could get the non-PC version for about $99 and the PC version for about $125. At those prices they sold out real quick and a few enterprising folks put them up on ebay where you will find the PC version for around $175 and the non-PC version for around $125 or so. You can verify this by using ebays option to check for what items have sold in the past - I think it is under their advanced search page.

Luckily, I haven't experienced any failures in my Yaesu VR-500
(s/n 0E1100xx).

It has a lot of features and I like using it,
mainly on VHF/UHF.

Its weak points are thin audio when used with its
internal speaker and mediocre intermod immunity.

RG8x and RG-8U are two different animals. The 8X has more loss than RG6 and
8U less.

Source record: 43922

For RECEIVING purposes only, the difference between 50 ohm and 75 ohm coax is negligible, particularly if you are using a broad frequency antenna, such as the typical scanner discone. The match on such an antenna is going to vary with the frequency, so the (perceived) mismatch between 50 and 75 ohm coax is not really a factor. (Transmitting is another story) As you guessed, loss/foot/freq is the factor to consider. As for the coax you bought from Radio Shack, well, it's great for CB antennas. The RG6QS would have been a better choice. Note, the RG6QS is not the same as the RG6 in the previously referred-to chart. I don't keep my coax chart handy (it's lost in a pile somewhere <grin!>). For a better source of information, try Rich Well's excellent scanning website - http://www.strongsignals.net/index.cgi and do a search for coax. Somewhere on there is a fairly complete listing of the various types of coax.

A lot depends on where you live, how far away the stations you want to hear are, and what frequencies they are on. The higher the frequency/farther away the stations are, the more critical everything becomes. Back when everything was on VHF, and people pretty much monitored their local channels on crystal-controlled scanners, it wasn't a big deal. Nowadays, when people are trying to monitor 800-900 MHz systems 60 miles away, it's a whole different game.

Mark

The procedures needed to upgrade a scanner (by the way what type of scanner radios are you
proposing to upgrade?) and cost of the work may far exceed the new purchase price of a
Radio Shack PRO 92 handheld/ PRO 2067 base mobile units or a Uniden BC 780 XLT
all of the above out of the box will do much of what your proposed upgrade to a radio scanner
would do The new unit will do it well!
Try selling then buy new or used or trade your unit in on a new one, with the features mentioned.
The discriminator tap is an after market upgrade to most consumer hobby radios scanners
and would have to be done on any of the above radios. Try starting with a new or used scanner
with built in-for purpose ctcss and (computer) interface then have the discriminator tap added.
There are after market decoders to "read out" ctcss, Digital tone codes and dtmf but
the external decoders need the disciminator tap done on most radios and will not control scanner squelch operation with out extensive computer interface and control software.
Go to http://www.strongsignals.net to research more on this subject.
Jim

Mike,

I totally agree with you about the name & address thing to, it takes to much time & personally I feel like I'm prying into a strangers life. I don't know of any other store that does this but unfortunately it their policy. It's especially annoying when you have 10-15 people in line & you have to ask for N & A, this makes people wait longer. Personally I would like to see it disapear quickly.

I recently got a pro-93 ver 1.00. Never noticed the text tag bug until recently. Apparently, in my experience, it only happens when cloning from another scanner or uploading from a computer. If you never do this, you won't see the bug.

This has already happened in Daytona Beach FL. I use to buy lots of connectors and adapters. Just the other day I went in for two BNC connectors and a few communication speakers (the week before there were five speaks on the shelf). The other day they removed all components, parts and coax connectors (as well as audio connectors). I wanted 3 speakers and they were missing too. I went up to the salesperson to ask about the speakers. She looked at my phone on my belt and before I could get a word out she said "What Cell Phone Service plan do you have?" I said that was personal information but I'm very happy with my plan, where were the speakers that were on that shelf the other day and were are your BNC connectors that were on the wall? Her responce "there is not demand for those items anymore so we don't carry them".

True store, happened at the RadioShack in the Voluisa Mall, Daytona Beach, FL. Looks like I'll be taking a trip to AES in Orlando more often now.....

>won't see the bug.

It happens when you've entered text tags in both the first and last 44
channels. The pointer to the text memory wraps after it gets past
255. You can work out which channels overlay each other.

There are two memories for the text tags. One is fixed ROM, where the
default bank#, channel# tags are stored. That's fine. The second is
programmable memory, where tags you enter are stored. There are 300
locations for those, but the 8 bit pointer can only access 256 of them
before it wraps.

If you never change the factory default in one channel, then the ROM
is referenced for that tag and there will not be a conflict between
that channel and its conterpart. If you enter a tag with text
identical to the default, then the radio references that instead of
the ROM and there will be a conflict.

Since manually entering text tags is a real chore, you're not likely
to get to the last couple of banks unless you're using software.
Interestingly enough, the tags in the overlapping channels are in the
scanner and do not conflict internally: it's just the ability of the
1.00 radio to display them. Clone a 1.00 to a later model and they
work as expected.

There is a huge discussion of this at the Yahoo! PRO-93 group.
Probably the second biggest topic. I think the biggest topic is the
subsequent discussion correlating date codes with version 1.00 vs the
later fixed ones.

FWIW, whether or not this bug is a problem depends very much on how
you use the radio.

Hi,

Politely tell them to put an "R" as in "Refused" in the First Name field and that's it. If they still insist, give your name as "Mickey Mouse" or Donald Duck". At that point they'll usually stop.

The Radio Shack marketing executive (marketing moron) that was pushing this name and address deal (a few of the stores still ask for it) must have left RS.

I have now found that the Container Store (yes HQ in Texas) is now doing this same thing.
Care to take a bet this is where the Radio Shack executive ended up?

When I worked in the Dallas/Ft. Worth area (1980's) -- large telemarketers in that area were always "acquiring" new lists. I never found out if they legitimately acquired those RS lists.

I tell them my name is cash. I usually get, "Your first name, Mr. Cash."
depending on how much the total is, I answer with George (Washington), Abe
(Lincoln), Thomas (Jefferson), etc.

Gets 'em every time.

Hi,

I ran into an ex RS VP (here in Canada) many years ago and I asked him about that and he told me they did NOT....al least at the time. However, these days, I wouldn't be surprised if did - anything goes as far as bringing up their year-end bottom line these days...

There's no question that it is an excellent scanner. They have become a bit rare, so I'm not surprised to see that price. It's a real shame they discontinued them (but it did allow me to get one for $89 when they did!) An added bonus is that this model can be fairly easily modded for full receive, and with a simple keypad sequence, it can be opened up for receive all the way down to 20 kHz (however, the performance below 25 MHz is not all that great, and you'd definitely need a different antenna).

If they ask for you name etc - just say "No." If they say they need a name etc - tell them to use their own. Every RS store that I have frequented has a generic account already set up. They don't like to use it (I suspect that they are scored on percentages of people who give their address etc), but will if you refuse to play their game.

Use cash, as they will harvest your name and address off a credit card or check payment.

> Which is it? tia

Yes, RG8 and RG6 are better than RG58. RG58 has a greater loss at higher frequencies. If you're interested in 460MHz, and especially 800MHz weak stuff, RG58 could attenuate the weak signals to a point you won't hear them.

RG-8 is a much less lossy cable at the higher frequencies, especially if you get the "foam" dielectric type.

RG-6 is a 70ohm type cable used in video work, but in reality, works quite well for 50 ohm radio work. It's loss is almost comparible to RG-8, and can be obtained fairly cheaply if you look around. On the negative side, you might have a bit more difficulty in finding connectors to fit it compared to the RG 8.

60 feet isn't that long a run and even RG58 would probably work just fine for you, if you already have some on hand. If you don't, skip it and go for one of the other two.

You guys are driving me crazy. All this discussion of RG-8/U and RG-8X; none of you have mentioned RG-8A/U, which is the polyfoam dielectric version of RG-8/U and it has almost as low loss as 9914. It would be my choice first, followed by a high quality RG-6 cable, (There's a BIG difference between varieties of these cable so beware here.) Honest specs on all RF cables can be found at Belden Cable Co :

http://bwcecom.belden.com/ .

> at 4.3db/100' @ 400MHz.
>

What year? My 2000 Handbook, page 19-2 shows 6 varieties of "RG-8"
cable, with losses at 1000MHz varying from 4.1dB/100' to 7.4dB/100'. As
I keep trying to point out, there are numerous "versions" of each cable
type and trying to point to the specs of just one type is meaningless
unless you get even more specfic in your descriptions, such as dielectric,
shield type, and center conductor type.

I recommend you guys peruse: http://bwcecom.belden.com/ . You'll find
anywhere up to a dozen different varieties for each of these cable types.

They are. "Names and Addresses" constitute a large portion of the salesdroid's
performance score.

Never mind actually KNOWING anything about the products you sell. Just get
those Names and Addresses and you'll be in the District Manager's good graces.
Sell 'em a Tandy Service Plan on those 4 "AA" batteries and you're REALLY
scoring some points with Fort Worth.

Signed,

A once-upon-a-time RS employee. Worst job I ever had. Company policies defy
all logic and common sense. No wonder the company's fortunes are faltering
today. I'm just surprised it took this long.

Come on Ed, admit it. It was a short drive. Heck, you could have
gotten out and walked. :-)

Yes guilty, because I was thinking of the RG-6 quad shield and not
the regular stuff.

I have been using LMR-400 for the last few years but I also transmit
on these antennas. If it was just for scanning I would stick with a
quality quad shield RG-6. I don't even remember the designation for
it. QS???

Thanks Ed,

Glenn

In article <3D6464D2.DA863088@vgernet.net>, rmsdec8@vgernet.net says...
> RS will be much better off without your trade thanks!!!
> Please take you business elsewhere !!
> oh you don't have anywhere else?, too bad!!
> Bye!!!
> I'm one of the so called Morons that work for RS!!
> Ever thought that it might be RS that gets the Staff to try to sell Cell Phones
> and Sat Dishes? thats where RS makes most profits!
> Like all stock market companies they want the best profits for the stock
> holders!!
> Cell Phones and Sat Dishes pay the best commision to the staff too, Jerk !!!!

Wonderful attitude, friend. I recently had an encounter of a similar nature with the RS store near my office. I came in during lunch to try to find a mobile radio bracket to use with my FT-817 radio. The gentleman behind the counter was very polite (you could take lessons from him), but told me he didn't have any in stock and neither of us could locate them in the catalog. I asked why it wasn't available, and was told that they're rearranging their inventory "to push the good stuff." (He explained that the "good stuff" was exactly what you mentioned -- satellite dishes and cell phones, which provide better margins.)

Now, I can understand a business decision like that. And I was certainly not angry at the salesperson who provided the information. I =am= disappointed that Radio Shack -- up to now my first point of contact when looking for electronic items, ever since I was old enough to handle a soldering iron! -- has chosen to make that decision. The problem is, if you don't provide the other services and products that many of us have come to depend on from Radio Shack, we're not likely to come to you when the time comes for us to consider a cell phone or satellite dish purchase. And attitudes like the one you just demonstrated serve more and more to push potential customers away.

And did you know that your message will live on for many years in the Google archives? Anyone searching the newsgroup archives there for anything to do with Radio Shack will see your message....

Point of record: at one time I worked for Radio Shack, in one of the stores in San Bernardino, CA. I was in the Air Force at the time, and took on a part-time job with RS for some extra spending money.

So yes, I have some issues -- and experience -- with Radio Shack management. And I only wish I knew the store where you work -- no doubt your store manager would love to know the kind of image you're

portraying out here on the 'Net as a so-called RS representative.

You may want to learn some people skills, or at least do some growing up.

(Don't bother with a reply -- you already made my kill file.)

Like all late manufactured radios sold in the U.S., the cellular band is blocked. The NRD-545 normally covers 100KHz~30MHz, HF shortwave bands. The addition of the CHE-199 module, adds the additional coverage from 30MHz~2GHz, VHF/UHF.

Buy yourself a mag mount that are used in cars and cut your self quarter wave whips for frequencies which you are interested, using the formula 468 divided by frequency = half wave divided by two gives you length in feet.

I did this and it works great, far better than a discone, and it is cheaps, even works great on 900mhz !

YOU will need either a metal sheet of somekind to act as the ground plane, or attach the magnetic mount to a central heating radiator, esp if it by a window. And the great thing is you can take with you in the car.

You can use thin aluminum rods for whips or even coathanger wire !

Believe me this is the best, forget those expensive peices of rubbish promising the earth.

The only problem is that you have the change the whips for each band, but at the same time you get a good aerial for a few cents. The only way to beat this aerail is to buy a yagi or log periodic buy indoor this is not practical

I read somewhere that APCO 25 was open protocol. So why then is the new digital plug in card so expensive "for the rights to APCO 25"? If it's open protocol, why should there be licensing charges?

2639. Re: Food for thought - APCO 25

It's only a protocol, which is only a set of standards to which APCO
compliant products must achieve, or better.

The actual products, and software/hardware (known as Motorola ASTRO) are
still proprietary, and covered by all the usual copyright laws, etc, etc....

As far as I'm aware, RS does not sell their list's to anyone. I think one of the dozen signs at the register state's the fact that they don't sell N&A, I may be wrong but I think there is.

Again I would encourage people to contact John DuBois and ask him to do the
right thing, discontinue Richards access to his server. If John DuBois
chooses to ignore peoples request then I would encourage them to contact SCO
Group(Caldera/SCO) and ask them to explain why one of their employees (John
DuBois) supports a server that tolerates users promoting the abuse of
children. Knowing the company I doubt that they would continue to allow
John to freely use their name on the Armory server.

Again, I would give John DuBois a chance to do the right thing by killing
Richards account.

The best thing to say is that I want to pay cash & I don't want my name on ANY mailing lists, if they continue to badger you I would leave the items on the counter & leave the store. Don't forget to take a manager's card & complain to them about it, they will probably give you a song & dance but the bottom line is that you are NOT required to give N&A.

You're such a shitty-assed little coward. Can't respond well enough to
defend your ideas, so you crave shutting people up you don't agree with.
You're such a needle-dick, an impotent little squid who couldn't get a hard
on to save your life!

Anyway: Won't work, been tried. They aren't interested in the counter suit
for restraint of trade and violation of civil rights. It would also violate
the 1996 Telecom Act that protects providers from complaints on content other
than libel/slander, copyright, or terrorist threat!! You get me squirrel??

Anyway, he doesn't work for SCO anymore. Haw, haw, haw!!! Tough shit,
squirrel!
Steve

2653. WANTED: .WAV or MP3s of Los Angeles Police/Sheriff Radio traffic

Newsgroup: rec.radio.scanner
Date: 2002-09-09 17:56:50 UTC
From: freebander@cfl.rr.com
Message-ID: <tunpnustfp755vdn0t1epj4mtfdod68ht0@4ax.com>
Source record: 43891

I am looking for good, clean recordings of LAPD and LASO radio traffic in either .WAV or MP3 format. What I am seeking specifically are the "squaks" and "tone bursts" produced by the radios and repeaters. I am going to integrate these tones into a project that I am working on for the game SWAT 3, and want the real deal. Also, good clean recordings of the beeps that the Sherrif's radios produce to mask the field unit's voice traffic until a "patch" is applied.

If you have any of these, PLEASE, either email me with where I can download them, or email them to be directly!

THANKS IN ADVANCE!

Freebander@cfl.rr.com

Richard,

The point is to make life difficult for you and anyone who supports your platform of child abuse. Your right to free speach comes with responsibility. You have chosen to voice your "opinion" regarding the sexual abuse of children. Now, you you get to deal with the majority of society that disagrees with you. Maybe nothing will come of it <shrug>. Maybe more people around you will look at you with distrust. They should. Too bad Richard.......deal with it......

Personally, Im glad you decided to voice your position on this issue. It makes it easier for us to identify threats in our community.

Have a nice day "Steve"

Yep, it's sad. It used to be that you could go into Rat Shack and
at least get some of the "basics" -- LEDs, resistors, caps, some
common ICs (555 timers, 78-series, etc.), connectors, etc. Their
prices were never great on that stuff, but there is always a Radio
Shack closeby, and they have good hours. But now most of the
Radio Shacks in Toronto have eliminated their "electronics
hobbyist" stuff and is instead concentrating on cel phones,
satellite service, 2nd-rate toys, and 3rd-rate computers.

And to buy even basic parts, I have to drive out to the boonies to
go to the electronics hobbyist stores.

There is a Yahoo! group for this scanner.

http://groups.yahoo.com/group/SonySC1Wavehawk/

Yes, they discuss "the mod." I don't eavesdrop at the group regularly,
but it seems there is an easier way to perform "the mod" than
originally thought.

I agree with all but lets face it.It does no good to complain...RS will survive
and survive well by catering to the eletronic appliance Toys R Us crowd.
Just have to be like an old buzzard like me and stockpile junk for
parts....Just be thankful you arent dealing with tubes the size of 1/2 gallon
milk jugs and transformers that weigh 100 lbs plus.......If I brought a 4-1000
tube into a RS the first thing the guy would say is "we dont carry light bulbs"

Hi,

> Gee you guys talk about all the stuff you cant get...what about an old
> buzzard like me that thought it was bad when the Lafayette and Allied
stores
> went down.....IC's..Led's what are those? LOL

When I was young there was a Lafayette store in downtown Detroit. I could get on the Tunnel Bus (I live across the river in Windsor) and easily go there. I bought a Signal Tracer/Generator kit from them once. Lafayette and Allied catalogues were a great source of info. I especially liked the Lafayette catalogues.....

> > And to buy even basic parts, I have to drive out to the boonies to
> > go to the electronics hobbyist stores.

Be glad in Toronto you have these - these type of stores have never survived here in Windsor.

That's the very point. It's NOT abuse. I've been that kid, I KNOW! I KNOW that slightly pre-adolescent kids often WANT sexual experiences with older teens and adults, and that they should have the RIGHT to it, as ANY living being should! You see, in your blind quest to serve your sick little Xtian antisexual fundy religion you seek to protect some of children's rights, and stomp all over other of children's rights!!

--
And you're prating nonsense, I can make life difficult for you as easily as you for me by bush-league bullshit.

>Your right to free speach comes with responsibility.

Your right to jabber comes with the responsibility to know whereof you speak, and you don't. I have the responsibility to BOTH stick up for children AND to defend their rights to the sexuality they want, when THEY want it. You see, you want them to have the right to say NO, but never YES! I WANT BOTH RIGHTS FOR CHILDREN!

>You have chosen to voice your "opinion" regarding the sexual abuse of
>children.

What you so coyly call my "opinion" is fact, whereas what you think of as "fact" is merely a bigoted opinion! What YOU'RE doing so blindly is called witch-hunting! You've joined the side of IGNORANCE and EVIL! You're the sick little servant of all the sick little Xtian White-haired TV Evangelists who lie about our true desires and shame people to extract money from them.

>Now, you you get to deal with the majority of society that disagrees
>with you.

That's happened before, Galileo, Michael Servetus, Aurius, Origen, Kepler, Pietro d'Abando, Vesalius, Giordano Bruno, etc. But time has past when you could just burn us at the stake to shut us up, you know!! NOW you need THOUGHT and REASON, and without it you will look like a fool sooner or later, as predictably as rolling downhill!

What I suggest is true may not be popular in your non-thinking-knee-jerking brainwashed religious circles, but it is entirely psychologically sound and even well-regarded by numerous psychiatrists and psychologists, and it is even acknowledged by anthropologsts as the way things are elsewhere in the world in other perfectly peaceable human groups.

>Maybe nothing will come of it <shrug>. Maybe more people around you will
>look at you with distrust. They should.

You mean because of YOUR ranting and raving? You're flattering yourself. And also, YOU REALLY don't know who your friends are and who your enemies are, unless you're really just a simpering brainwashed fundy bigot!

I ALREADY tell everyone who will listen precisely what you would want known about me, if you desisted from LYING!

>Too bad Richard.......deal with it.....

You pompously and ignorantly overuse elipses in place of reason and good argument. It... won't.... work...

>Personally, Im glad you decided to voice your position on this issue. It
>makes it easier for us to identify threats in our community.

Yes, and now we know that YOU, in your abyssmal ignorance, ARE that threat!

>Have a nice day "Steve"

Everyday, you ignorant little bigoted asshole.
Steve

Dave -

Actually did that once - when on the road -- manager came out said if I did not like the N&A "policy" to shop somewhere else. Now you know why I don't shop there anymore.

So you have demonstrated that you can not control your sexual urges, you
also demonstrate that you cannot control your emotional outbursts.....

Again.....have a nice day "Steve"

>here in Windsor.

Probably because of the horrendous 15% tax rate. You can take the subway to
Detroit and buy electronics parts (or most anything else) for much less.

The only retail trade that thrives in Windsor is the alcohol business, serving
under-21s from Michigan. (Legal drinking age is 19 in Ontario.)

2668. Pro-2050 scanner question ...

Does any out there that can answer a question for me regarding trunking with Pro-2050 scanner. My question is if you program two trunking banks (Bank 1 and 2) can I scan both banks at the same time? Thanks!!

Tom

2669. WTB -- Looking for:

I am looking for programming information and batteries for a Kenwood
TK-310 UHF handheld radio.

I am looking for programming information, owners information, batteries,
etc. on a
Midland 70-253B UHF handheld radio.

I am looking for owners/users information and field programming,
replacement battery, Soldiers Intercom mic/earphone, etc. for an ICOM
F4S UHF handheld.

If you can help please advise by return email. I will be glad to
purchase needed accessories at reasonable prices.

thanks and 73,

Nick

I got some email replies to this post. I've entered the frequencies,
including the trunked system, into my Pro-2053, but have heard
nothing. I should be well within range, as the straight line distance
is probably no more than 25 miles. Is there anyone here that ACTIVELY
listens to police, fire and EMS on Ft Dix and McGuire AFB?

> Use cash, as they will harvest your name and address off a credit card
> or check payment.

RS employees have a quota for names and addresses captured. At one of my favorite RS stores, there was a sales person on the floor who really 'got it.' Left me alone to buy my stuff, and after a quick brush with a steady stare, and a malevolent pause followed by a quiet 'no', never asked for my name and number again. She was terminated. Her Store Mangler told me that she failed to meet some required numbers. I ran into her at a real electronics store in the area a few months later and she told me she was let go for two reasons. One was not capturing her quota of names and addresses. The other was not aggressively pushing cell phones. This despite the fact that she had been the highest grossing sales person on the floor, commission only and making a rather substantial income.

The problem with RS, however is not the clerks on the sales floor. Or, in most cases, the Store Mangler. The problem with RS, like most businesses, is in the corner office. It's there that the culture is formed that's passed down through the corporation. It's there that the hiring policies are formed, and the requirements of performance established.

I rarely go into an RS store anymore. Better stuff is available elsewhere, with much less intrusion on the sales floor. The mangler at my local RS, who wised up pretty fast the first time I walked in there still says hello when I see him out in the community. But he doesn't ask why I haven't been in the store lately. He fully understands why...and although he doesn't dare say it out loud in public, privately admits he agrees with my decisions not to return.

RS is, for most people there, a job. There are few who consider it a career anymore. And of those, none that I've met who are into electronics.

I had a maddeningly hysterical encounter at one of the stores in Rockford a couple of years ago with a sales goof who had never heard of a shortwave radio. After bringing out several scanners, with escalating frustration because I was looking for something with HF coverage and he didn't understand that there was a difference, the mangler of the store came out. I recognized him as the owner of a hobbycraft store in South Holland I'd done spots for a few years earlier. He quickly dismissed the sales goof, and brought out a number of SW sets himself. We had a nice chat about the job, his future with the company, and how he went from owning Scale Models, to mangling a RS in Rockford.

His answer was pretty simple...RS is a sales company. He's a salesman. It was a perfect fit. I asked him if he had any background in electronics...he said "no...that's what I have YOU for."

Mike has since moved on. He was frustrated with all the tedious requirements that upper manglement had saddled him with that really had nothing to do with sales or electronics, or anything else in the real world. Which seems to be the way with most RS manglers these days.

Howdy
All of fellow scanner listeners.
Garry and I have been working very hard lately, with trials and tribulations
we have done several updates and additions to Newcastlescan.

http://newcastlescan.tripod.com

The updates included a new Soundbyte host.
thanks to www.tuscanblue.com
there you will find a directory of (17) new soundbytes:)

a bus recording sample in the "on the buses" page

updates on the UHF CB page

New photos in the webshots albums

new classifieds

a new 800Mhz trunking page with programming instructions to get not 1 not 2
but 3! different trunks.

New Links on the links pages

lots of great comments in the guest book :)

and a link on the guestbook page for your copy of the most extensive
GRN ID LIST in excel format ever :)

Its almost like xmas when we do an update like this!!!

Oh and the live scanner is up and running tonight With NSW GRN AND VKG
Feeding:)

Cheers And Best Wishes
Mike and Garry..

2679. Help! - Diamond D-130J support pipe inside diameter

Newsgroup: rec.radio.scanner
Date: 2002-09-10 14:50:26 UTC
From: Ted and Kim Moran <tandkmoran@attbi.com>
Message-ID: <B9A370FA.D3D0%tandkmoran@attbi.com>
Source record: 43819

Looking for the exact inside diameter of the support pipe (through which the coax must thread) on the Diamond D-130J discone. I think the exact part number is 01020. I'd measure mine but it's 4 feet too high to reach and I can't easily lower it. I'd like to switch 1/2 inch hardline but I suspect the connector for the cable won't fit up inside the pipe. Help please! If anyone has a D-130J laying around or easily accesible (attic?) could you please measure it for me? Thanks in advance.

Since LAPD has gone digital, their radio traffic is no longer
scannable, hence, all the online scanners for LAPD are offline.

As far as the LA County Sheriff's Dept, I have yet to come across any
place that has live audio from them, and the recorded audio that I
have encountered was a very short clip, included nothing that I am
looking for, and the quality was, well, for lack of a better term,
HORRIBLE.

And yes, I have been to google - still nothing.. I have searched using
Copernic 2001, which actually hits about 10-12 different seach engines
all at once, including google, and still nothing worthwhile.

I have some LDF450 with N cnnectors on it, and while the hardline fits, the OD of the N connector is far too big to fit in my D130j

Just make up a short patch lead...

Reading quite abit about digital and was wondering if a radio like the AOR AR8600 will *theoretically* be "upgradeable" to digital via the built-in back panel card slots? If so, would it be cost effectively practical (affordable) for AOR to offer this upgrade?

Also, new AR8600 MkII extends to 3.0 GHz. What is up between 2 and 3 gig?

Thanx

No Jim they aren't. Its rare to hear encrypted comms on the MilAir
bands.

Probably one of the most miss-understood things on the newsgroups is the
use of encryption on the MilAir bands. Your local police department
encryptes more comms then you'll hear on the MilAir bands.

For freqs that will be of help goto http://www.MilAirComms.com

They're digital in Southern Ontario.

Check out http://www.trunkedradio.net or http://groups.yahoo.com/group/ScanOnt
for more info on this.

There's been lots of chatter on the subject in the yahoogroup.

From: Mike Coletta <macoletta@home.com>
Message-ID: <25Sf9.933$Zi.358717@news1.news.adelphia.net>
Source record: 43702

PRESS RELEASE: The battle started over two years ago when attorneys from Radio Shack Corp attempted to block the registration of the ScanShack trade mark. Radio Shack Corp is known for going after those who try to trade mark a name with the word "shack" in it. Numerous companies have tried their luck in legal battles against the corporate giant, but few have come out winners. There has been some give and take, but Radio Shack Corp did not want to give at all with the ScanShack trade mark. They filed their opposition with the trade mark board and requested extensions.
In a decision made by the trade mark board on August 13th 2002, after two years of motions, ScanShack is now a registered trade mark.
The ScanShack web site will again be accessible in the near future.
The web site was the first home for "The Adventures of Scanner Dweeb" comic strip, now seen monthly in Popular Communications magazine.
(ScanShack is a registered trade mark.)

Nope Sorry Dick, this is an un-moderated group. Don't worry about
Doug (bookooaddys@yahoo.com) they
usually let him out of the asylum for a month or two before
they put him back in his room. As for the others, ignore &
don't feed the trolls.

Reminds me of a legal battle years ago. Little flower shop in Cleveland had the name "This Bud's for You". Three guesses who jumps down their throats to get the name changed. Kicker was, the flower shop had the name BEFORE the advertising slogan, BUT Budweiser had copyrighted it. Haven't had one of their beers since.....

Dick:

The usenet newsgroups are of two basic types: moderated and unmoderated.

The moderated newsgroups are in the minority. They work by publishing a set of rules -- the rules mainly say what topic will be discussed on the group and that no personal attacks or off-topic material will be allowed. When you post to a moderated group, your message goes to a moderator -- moderators are volunteers who agree to enforce the rules.

The moderator (or several moderators) reads your article to ensure it meets the newsgroup standards. If it does, he posts it. If not, he rejects it back to you with an explanation and an opportunity to appeal.

Unmoderated newsgroups are free fire zones. Say what you want, how you want, to or about whom you want. Try to stay on the topic of the newsgroup -- for example, on this group, don't post articles about aliens in Roswell and your Britney Spears navel fetish. However, if someone says something dumb, and you want to tell him he is dumb as dirt, well, have at it.

People being what they are, in any group there will be a few who have not matured beyond the sixth grade and who revel in potty jokes and in calling other people obscene names. They are the minority but they get a lot of attention and, sometimes, they post the majority of the articles.

Ignore them. Post your question or comment; reasonable people will converse with you.

Just my opinion.

--

Regards,
Joe S.

I've given my name and address (altered) time-off and again at Radio Shark and have never received any junk mail or so much as a free catalog.
So what is the whole deal with the interrogation thing? Doesn't appear that they do well by hassling their customers.
Its really stoopid that an outfit would attain notoriety by insisting on doing this nonsense with no perceivable benefit.

Hold on. I thought McCarthy was against Communism, not Democracy
(Americanism).

What's the damn purpose of NAMBLA anyway? To make it easy for the FBI to
round up possible sex offenders when there's a law that makes un-acted-upon
desires a crime?

J

Moderated groups are the answer. Still, some people don't enjoy having their posts censored by a moderator. Doesn't bother me in the least bit, personally. I set up STUMP to help moderate alt.parenting.attachment for a friend of mine (some of those women are nazi like, but that's another post for another group). This way, a linux box does a great deal of the moderating instead of a human :)

Once a non-moderated news group is created, it cannot be controlled. It is not "owned" by anybody. The only way for it to go away is for news server admins to quit carrying the group (unlikely). However, if somebody posts something that you find rather objectionable, you can see if it violates their ISP's TOS agreement (found on any ISP's website) If so, send an email that includes the post and all headers to their abuse address. If it doesn't violate a TOS agreement, or the ISP doesn't do anything to stop it (they have that right) then your out of luck. Use a newsreader that supports the use of a killfile. I dig XNews, myself (on Win32 machines).

Alan S.

I got this unit from a guy that likes to buy stuff and then for some reason doesn't use it. He has the money to do it and does it all the time. I picked it up in a trade for other stuff. The unit has been sitting for a long time and it looks just like when it was purchased brand new. Here is a link to look at the picture of it. http://www.rigpix.com/aor/aor_ar1500.htm

The picture could very well have been taken of the unit I have, that's how clean it is. It is a 10 cosmeticly and electronicly
The unit does AM/FM/WFM/SSB from .5 to 1300mhz no gaps on this early model.

Comes with manual, AA pack, original battery pack, wallwart charger. Now, I have no idea what this is worth since it's not a current model.

Should we say $160 shipped COD, prepay or Paypal.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

I can't even find any NAMBLA, not nambla.org or nambla.com, I think it's
a bad gag, a fucking paranoid Fundy MYTH, like "snuff-films". The FBI
looked for "snuff-films" for THREE YEARS after a bunch of fundies got
incensed about them, and they couldn't find any of them either, not
even in south America!!

The films that show people being killed are shown on plain old TV on the
History Channel! They can be found in libraries and film archives quite

freely! There's just no thrill and no money to it! They don't even sell
well!
Steve

Here is the "mission statement of NAMBLA from their web site.

WELCOME! The North American Man/Boy Love Association (NAMBLA) was formed in 1978. It was inspired by the success of a campaign based in Boston's gay community to defend against a local witchhunt.

NAMBLA's goal is to end the extreme oppression of men and boys in mutually consensual relationships by:

building understanding and support for such relationships;
educating the general public on the benevolent nature of man/boy love;
cooperating with lesbian, gay, feminist, and other liberation movements;
supporting the liberation of persons of all ages from sexual prejudice and oppression.
Our membership is open to everyone sympathetic to man/boy love and personal freedom

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated

with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Listening to a scanner can be one of the most enjoyable hobbies that one can acquire. A decent understanding of the nature of scanning is an essential prerequisite to a life-time of pleasure.

I am the author of one of the definitive books on scanning, "Captain Scanner's Scanner Radio Guide: Scanning with Scanner Radios"
I'm not writing this post to promote my book so much as to provide some of the much-need mentoring for those who would like to be welcomed into the world of scanner radio listing.

And it is with open arms that I welcome you Barry T Dallmann! Welcome. Welcome to the world of scanner radio listening! A heartfelt welcome from all of us!

Probably the most rewarding use of a scanner is to learn about a major event that has just happened, and to quickly make your way to the scene and try to get in the camera shots. The object is to get on TV as many times as you can. I personally have been captured on TV news at 17 residential and commercial fires.

Another great use of a scanner is to aide public service personnel on the scene. Often times what is needed at a crime scene is someone to direct traffic as police cars come rushing in. A scanner can help put you at the scene, and make you look official because your radio is emitting police sounds.

If you ever find yourself on a hostage scene, playing your scanner loud can help the situation, because the hostage-taker can hear the police radio, and know that the police are living up to their end of the bargain.

Playing your scanner at the mall can help the suspect in the green pants realize that he is the one who had better straighten up and fly right.

Playing your scanner out loud at a hotel can help you walk right into the ladies bathroom if you carry a plunger.

Listening to the local jail can really help out because you will have a jump ahead of everyone else because you know where door D is and what everyone's names are.

Once you have mastered the basics, you will be ready for a lifetime of scanning pleasure like I have had.

This, like many rec and alt newsgroups, is unmoderated. If someone gets too far out of line, the most you can do is complain to their ISP, if you can figure out who that is. Many post through "anonymizer" services, so that they cannot be traced.

Other than that, if the posts bother you too much - your only option is to either kill file the offenders (if you can) or just not read the group.

Right?

2769. Need assistance with trunk tracking in NJ

Newsgroup: rec.radio.scanner
Date: 2002-09-13 13:37:08 UTC
From: Andy KC2SSB <vhfradiobuff@yahoo.com>
Message-ID: <00q3oucjv6g35sb43vfbdu028o05idhud5@4ax.com>
Source record: 43759

Hello. I have been having a little trouble hearing a trunking system that I should be able to hear without any problems and thought that maybe some of you might be able to assist me.

I have been trying to listen to Ft Dix/McGuire AFB but I hear nothing. I've had a couple users on this newsgroup email frequencies for me, but there's nothing heard on them when in trunking mode. I have not tried conventional mode yet. I do not even get a control channel. I am about 20 - 25 miles straight line distance from them. I am using a Pro-2053 scanner with a telescoping antenna on the back of the set - not the one that came with it, but one with a BNC connector and the center coil. I can hear NYC quite frequently on my local fire freq and NYC is about 45 miles north, so I don't see why I wouldn't hear Dix/McGuire.

I do have 2 other trunking systems programmed in (NJSP and Ocean County), so I don't think I programmed it wrong. Is the 2053 able to work with a low 400 mhz trunking system? I use Win93 to program the scanner. I have the base frequency set at 406.000, the offset at 25 and the step size mhz at 25.0. I have the fleet map settings at type II with fleet map 0 and 1 programmed with the ID's of the Dix/McGuire stations. Should I make the bank "closed"? Any suggestions would be appretiated.

I am not the one who was complaining. I haven't (yet) used the "Ignore Thread" command on this thread, but some people seem to think that they are being *forced* to read messages on topics in which they have no interest.

www.radio-scanner.co.uk

Date: Friday, September 13, 2002.

Welcome to another issue of the Radio-Scanner.co.uk
newsletter. The new scripts on the site are beginning to
settle in with regular articles being posted by registered
users, and the forums beginning to regain the popularity
that there were on the old style website.

I have included a few feature articles below which may
be of particular interest to radio amateurs with regards,
hams being duped into MI5's play toys.

I would like to thank everyone so far for updating the
site with articles, and hope that everyone can use the
features if you register at the site to automatically add
links to your own site, submit downloads, reviews
articles and news. Its an exciting prospect that everyone
can be involved in the development of a website, and
not just the one single webmaster, so the views can
never be biased. Please keep them coming in

Prince Harry given Police Radio to play with

Not sure whether anyones seen this, posted it on the website today:
http://www.radio-scanner.co.uk/article.php?sid=30&mode=&order=0

A recent book written by Nicholas Hellen PRINCESS DIANA'S former police bodyguard has alleges that her private telephone calls were recorded then rebroadcasted on frequencies for radio amateurs to receive, knowing that they would eventually end up in the hands of the media. The Sunday Times, reports on this.

Nicholas Hellen PRINCESS DIANA'S former police bodyguard has alleged that the intelligence agencies routinely taped her telephone conversations at the time her infamous "Squidgygate" call one of her male admirers. Inspector Ken Wharfe, who was Her senior police protection officer At the time, suspects that security personnel were responsible for record-; and rebroadcasting the embarrassing conversation so that amateur radio hams could pick it up. He is the first authoritative insider to provide support for Diana's belief that, as he puts it, "the Establishment was out to destroy her".

You still believe that, Aanal Aaron? Even your buddy George Busch doesn't believe it, but you're so aanal, frustrated, and desperate that you'll believe anything, even if it comes from a Federal Criminal and a guy (KE4ENX) who has been caught jamming 2m repeaters in Atlanta and Cornelia, GA. And you still can't spell Steve's name correctly, even with it right in front of you. There's no "t" in Rogovich, dimbulb! Whuzza matta, thinking with the wrong head again?

Let me type this very slowly so maybe you'll comprehend it this time: I'm not Steve. I'm as much Steve as you are Aaron. In other words, you're wrong AGAIN, as usual.

I sincerely hope that, if you keep posting his information for incorrect reasons, he'll get you TOSsed!

Excuse me, "Bobbie-girl", but if the claim against you was false, why
was your account cancelled? And what makes you think I send it?

You've been on the usenet for years, bobbie-girl, and anybody can do a
search to prove that. Just search for Radio Bob and/or rbcn1.

Still jamming the ham repeaters in Cornelia, GA?

TROLL!!

From: jamey clark (jameyboy@juno.com)
Subject: The Big V followed me! Some of you may be infected by this
"troll" not w-w!
Newsgroups: alt.religion.w-w-church-god

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

2779. Re: Who's on 152.575 Grey Co. Ontario?

Newsgroup: rec.radio.scanner
Date: 2002-09-13 19:52:36 UTC
From: PublicGIS <publicgis@rogers.com>
Message-ID: <8mrg9.11606$U_.4707@news04.bloor.is.net.cable.rogers.com>
Source record: 43769

Or, to solve your problem, please give publicgis.com a shot (you might be impressed)

Step by step instructions on how to use publicgis.com to solve your problem (see bottom of posting):

Select "Open Theme", and choose "Canadian Spectrum Direct".

Then, ensure "Tx Frequency" appears in the "Add Thematic Search Condition" and press the "Add" button.

Now, enter the following values to define your query:

Within 100 kilometers of
Latitude 44.33 (North is positive)
Longitude -80.75 (East is positive)
AND Tx Frequency between 152 153
Press "Search"

It returns 36 entries, which you can click on individually to get more details about each emission.

You can even click on "Map" (on the left side of the page) to draw a map of the 36 emissions.

Now, with the map present, redraw the map by selecting the following values (see controls just below the map):

Pixellation
- size 5
- Low color "White"
- High color "Blue"

Aggregation
- Function "Maximum"
- Attribute "Tx Power(dBW)"

Press the "Refresh" button. It shows the emissions colored according to the power emitted.

Nifty, perhaps?

Unlike the service offered by Industry Canada, publicgis.com offers you much more control over what you are querying and what you can see. Industry Canada does offer XML output, which is a very useful feature, and is what I will add to publicgis.com in the coming weeks.

Cheers

Kevin.

The laws in Britain are very strict about monitoring and if someone used ham radio frequencies in HF they would have been received world wide, if it was on 144/430 then the hams would probably have been up in arms about unauthorized use of their very limited frequencies. Today wire tapes are done by going to the source, not by tiny transmitters, since Scotland yard had access to the various phone systems used by the Royal Family that is where they would place a tap, not rely on a transmitter in the ham bands that could die or be interfered with.
It is possible that Diana used insecure cellular phones that radio hobbyists, often radio hobyists are lumped together with radio hams, could have picked up her calls, but this would not indicate ham radio operators as being responsible for the recording and dissemination of the tapes. I do recall there were several phone calls of Diana that were recorded over the radio, but it doesn't mean ham radio operators are responsible. Journalists could have bought the tapes from people monitoring cell phone frequencies and recording them.
Here in the USA Tom Cruise and Newt Gingrich had there cell phone calls intercepted and disseminated to the newspapers and no ham radio operators were involved, just stupid people that ended up paying a heavy price for thinking they could record cell phone calls, tell everyone in the world and walk away with a little extra cash in their pockets.

Go to the US govt. FCC webpage and search for the Code of Federal Regulations. One low numbered volume will have the frequency range/service assignments for all 3 ITU world radio regions.

Don't do it. Bad idea. Expensive toy. Poor video sensitivity on 2-2.4 ghz. Batteries get hot and don't last long. Require frequent recharging. You have been forwarned.

Maybe we can chat about the awful erroneous frequency listings in this month's MT for the Northern Neck of Va. Three frequencies are bogus....not an FCC assigned frequency. I found 8 frequency errors MT published unsolicited from a reader who is located 110 miles away from that area of the state. Heaven only knows where he obtained those erroneous frequencies. A simple check of the FCC database would have caught at least 3 of the errors. There is no excuse for allowing that to happen.

Icom makes a TV adaptor that works off the 10.7 if for the R7000 and R7100, if your 10.7 IF provides 9 volts you could use one of these units. New these units would seem to be way overpriced.

>
>Please email reply also if possible...Thanks

I carry the Cambridge Fire radio traffic (VHF and full trunk) as part of my live Metro Boston Fire scanner feed through Live365.com. It is pretty much a 24-hr/day feed (with occasional down times of a few hours here and there).

I do not carry any PDs on my feed at this time. You may want to try scanboston.com for Boston Area PDs

There is a link available to MY live scanner on my website's home page at:

www.firstduephotos.com

ENJOY!

Cross-posted to: alt.radio.scanner,rec.radio.amateur.antenna,rec.radio.scanner,rec.radio.shortwave

I guess I agree about being sick of seeing the tripe about RS employees. I used to work for RS... not in a store. Some are incompetent. Some are quite good. But, in either case, I'd hate to deal with some of the people they encounter every day. Today, it's a whole new set of management since I was there, and they well may be REQUIRED to push phones, etc.

Fortunately for those who are tired of this thread, Outlook Express --and probably the rest of the browsers-- allow us to create a filter so we will never again see a message whose subject contains "RS employees." (That also means I won't see replies to this post.) I've always found that to be the better solution than criticizing the folks who enjoy the thread in question.

SIMPLE MOD

You change all crystals in the 10 meter position to 1mhz LOWER

That gives 26 to 28 mhz operation and that is all you need to do 98% of the
time.

This is what this hypocrite promotes for himself but chastises
others for doing. BEGIN OF QUOTED MATERIAL:
****
08/23/99

rec.radio.cb

O4AT trade proposal...

Hi Steve

I have a MINT Radio Shack TRC 457 base ssb unit. It was made in 78!

Has the Uniden 858 PLL chip. I also have the SECRET CB modification info for this radio, The radio itself has NEVER been opened up. It works and looks like new. Comes with a RS amplified base station mike ta boot!

I would take $50.00 cash and the 04AT for it, if the HT is in good shape. Obviously we would each pay our own shipping.

That's no different than nearly every HamFest I've been too. I've yet
to see an ham ask the buyer if he has a ham license. Then we won't even
talk about all the 11 meter amps I've seen being sold.....

George

Heck even the eBay average price is less than that.....

Plus you can get a NEW IN The Box BC 780XLT shipped for less than
$350.00 and its a far better scanner..... And I do have a both to
compare.... I just keep my PRO-2006 as that's my retirement fund :)
I'm sure in 25 years it will be worth atleast $20,0000, not bad for only
a $300.00 investment in 1990

Hi I'm Thinking of Buying a Fairhaven RD-500VX+, I'm new to scanning but what i've seen with this one is that it does Radio,TV and just about everything, Is there anything else for the same sort of cost that has the same sort of spec.

And whats the best sort of mobile aerial to plug into these things, I would hate a shop to sell me something that know one has used before .

And Many Thanks to Hans Verhoeven for the link most useful
http://strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=rev&c

Many Thanks
From a newbie
Darren

Aanal Aaron, are you stoned or just STUPID? Show me where I asked George to "bail me out", if you would please. I said what I did because George Busch, WA3MOJ, posted in another thread that he knew I wasn't Steve Rogovich. Lok it up, dimbulb. I'm not going to do it for you. YOU are the only one who still thinks I'm Steve. Sorry, but you've never been correct before and you're not correct now. I've never been Steve and I'm still not Steve. Steve does not operate a pirate station. There are several online directories that will show you that Steve Rogovich is still living in VA Beach. Are you too damned stupid to look it up? The question only needs to be asked, dimbulb. You haven't been correct about anything yet, why would you be correct now?

It just shows how frustrated and desperate YOU are that you are willing to accept the word of an aknowledged Federal Criminal because it suits you, when you put down other alleged Federal Criminals and don't take their word for anything.

Woodbury McCrae Parr (KE4ENX) is not a credible source of information. Just like you're not a credible source of anything. You are a proven nincompoop.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from

alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Funny i went to bother of the above mentioned websites to possibly order a scanner or portable radio and both said the radios shipped to USA are cellular blocked....
I guess when i go to Canada for vacation next year I will buy one in person...

Why's he a scammer? He owns the radio and he wants to sell it. You don't happen to agree with the price. So what? Instead, you and those other "experts" want to squelch the guy's deal because you *think* you're knowledgeable about used scanner values and scanner market supply and demand. Even if he asked a price that you would agree with, you still wouldn't buy it. Now, run along and find something else to do than insult people who wish to set prices for things they own rather than defer to you.

You had better check with the place you plan to but from because most of the scanners we get up here are shipped through, "the land of the free" and are blocked.

He should try E-Bay.

Probably will find some Bidder
(or perhaps a shill?) on there who
just rolled out the back of a turnip
truck who would give him that much
$$$ for a 10 year old obsolete scanner.

...spoken like a possible ex-hamfest "professional
dealer" who is now an E-Bay trader? Hamfests have
gone the way of the dodo bird, and you can now draw
from a resource pool of far more Suckers....errr...Bidders
on E-Bay. (...this is what one ex-hamfest "gypsy radio
salesman" told me last Month. He used to sell at Gaithersburg,
Shelby, Dayton, Rochester, LIMARC and 2 dozen other
hamfests per year. Says he makes far more money on E-Bay.
Darn shame that E-Bay killed all the hamfests ain't it?)

You may have to if your Emergency Services go digital because they share the cell-band and use the same sights and frequencies as cell. Doing a quick scan of cell last night I was able to pickup some of our fire department in the clear not full sentences but enough to know it was fire smack on the cell frequencies. Just things like, "battalion 1 returning to" then nothing but digital noise.

In the United States at least, the cellular phone band is not shared with
the public safety band. 800 MHz public safety band runs from 851 to
868.9875. Cell phones from roughly 869 to 890 MHz. They do not overlap.

they were re broadcasted for Radio Hams or any scanner listener to monitor
on mobile phone freqs.

no ham radio freqs were used.

this was believed at the time as Cyril Reenan a retire bank manager i
beleive picked up the signals on a completely differant day to a secretary
somewhere also into scanning,both had no reason to make up the day and time
of hearing the same message.

both police and press link hams and scanner enthusiast in one lump,of course
they can be,but not always.

i still have all the press cuttings from that famous 2 weeks in scanning.

regards

Depends on where you want to mount it (best in easy line-of-sight to avoid going off the road trying to get back that frequency you heard something good on, but it started scanning before you could stop it). The trick is to put it in an accessible place, but disguise it as something non-valuable. Like a tissue dispenser or similar item.

I once cut a hole in a fake wood panel in the dash of a car to insert a CB into, and found a box that at one end matched approximately the width & height of the radio, cut it so it would just be long enough to cover the protruding CB face, and put a tissue dangling from the flap on the end of the box. It looked just like a dispenser. I just took off the box when using it, and stuck it back on when I parked.

Maybe put a tissue box on top of the dashboard, and figure out just how to incorporate the scanner into the box so a flap can be pulled down to expose it when in use, and replacing the flap to its original position makes it disappear when desired.

Go to an auto parts store and look at all the accessories they sell for cars - all sorts of junk to attach to the dash, the console, etc. You may get a few ideas there.

If you can get it into a recess, like a pocket built in to the dash to catch stuff, you can simply create some kind of cover for the area that snaps into place and hides it completely.

Someone else suggested a console storage area, which you can do as long as you're sure you won't go trying to program or otherwise operate the controls instead of looking at the road. If you're satisfied with just letting it run while you're driving, then many places out of sight or reach can be used.

I did reply to your original posting. I would be amazed if the two suggestions I offered didn't pan out. Both are now and have been up and running continuosly since my original reply.

My live feed does cover the Cambridge Fire Depts 800Mhz system. It also covers about 80+ other fire and ems agencies in MetroBoston. Go to the site's homepage and scroll down for a link to the feed through Live365.com.

http://www.firstduephotos.com

ScanBoston also covers Cambridge (Police and Fire) along with numerous other agencies in and around Boston.

http://www.scanboston.com

If you are having problems connecting with either of those, please let me know and I will see if I can assist you.

ENJOY!

Ted P
Cambridge,MA

FYI -- There are no live feeds that exclusively cover the City Of Cambridge

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

Digital mode has nothing to do with the cellphone "band" or sharing transmitter sites There can be digital or analog in most any band, and they may or may not be located at the same sites. Orange Co California police are digital AND encrypted on 800 band. LAPD is digital but NOT encrypted on the 482 & 506 MHz bands.

I do realize that but what our ES looked at was a system that had all of the bugs and dead spots worked out of it. The cell system offered that and would offer that in many towns and cities in Canada and the US.

Hi Rick, thanks for the freqs. I have been getting the Woodford EMS dispatch on 158.8200. Do you have the Bluegrass Community Hospital frequency. The only ones I have found are shared with Fayette County EMS and usually it is Fayette talking. Also I heard a Woodford officer saying "switch to Channel 5". I only know of the 4 and that is the only time I have heard it mentioned.

Thanks for putting this story regards Radio Amateurs in it's correct context
Paul.
The media due to a lack of knowledge and understanding always 'lump' all
radio listeners with the good old name; "Radio Hams" (in the UK we are,
"Radio Amateurs").

Once again thank you, cheers to all, Ken, G4KIR.

WRONG! In Brit we are known as Radio Hams to the
general public. This is the term under which I became
attracted to the hobby 40 years ago; especially finding the technical
thrust that is the essence of Ham radio to be appealing.
It is the term which I use to this day.

It is crypto-CBers such as the RSCB who vaunt themselves
as "Radio Amateurs".

Hi

Radio amateurs are using rotators for Yagi antennas in order to get
satellites and they are controlling the rotator
with software like Nova for windows. I want to ask
if I can find in the market rotators for TV-Sat dish?
I suppose that with a system like this will be much easier
to get the arc

Thanks

Well that is one of the theories behind the derivation of the term. Another is that it is from the initials of three Americans who, as amateurs, ran a station initially with their three names as a callsign. It was later shortened to just three letters (HAM) and when some US politician referred to the station by the callsign (in the context of good operating I believe) the term Ham came to be universally applied.

Who knows what the true derivation is and does it matter? If all we have to worry about in the hobby is how we came to be known as radio hams it would be nice, would it not.

No, it only confirms that one does not need a solid command of the
English language/spelling/punctuation before one can purchase a
computer. Unfortunately, a spell checker feature is often overlooked.

But then again.... Compared to many "professionals" the operating
techniques of most recently licenced amateurs, probably are quite
poor.

Source record: 43583

Radio Shack has a very nice tunable AM Loop Antenna which works very well. A ferrite antenna must be tuned by either a capacitor in the radio or by an external capacitor, so each antenna is specific to the radio it is a part of. If the radio doesn't have the required tuning capability, a ferrite antenna will not do very much by itself.

2894. PRO-34 Question

Newsgroup: rec.radio.scanner
Date: 2002-09-16 23:30:22 UTC
From: navic@earthlink.net
Message-ID: <4af36670.0209161530.65fcad02@posting.google.com>
Source record: 43584

I followed the instructions on this webpage
http://www.geocities.com/CapitolHill/Congress/1692/34/index.html to
mod my PRO-34 scanner to recieve 800mhz cell coverage. I don't know
if clipping the D-11 diode really does give you the 800mhz
frequencies, but I tryed it anyway. I can't enter in a 800mhz
frequency after i moded the radio, it still says error. Does this
mean the mod doesnt work? Mods for other radios sometimes say you
need to calculate the unblocked frequency b/c the display frequency is
incorrect. Is that true for this scanner? If so how can I calculate
the 800mhz frequencies? I have also read that any scanner made after
1994 can't be moded for cell frequencies b/c the frequencies are not
in the hardware at all (the pre-1994 scanners just blocked them). Is
this true? Does anyone know what year the PRO-34 was made?

Thanks,
Navic

2895. Technical comments anyone ?

Technical comments on this link, or have
I found someone's new use for a Woger
VCR Wabbit's TV Cable transmitter?

Here's is what to do.

1) Click on the link below this line.

http://voy.voyeurweb.com/main/vod35/VS61995teq/index.html

2) READ the complete description in the subject line BEFORE
paging down to view the pictures. (If you look at the pics before
you read the technical description, you'll lose the effect to this
absolutley brilliant contri in the VW Page.

NOTE: I **did not** post this contri on/to V-Web. I came about
it *quite by accident*, but I nearly fell outta my chair laughing with
my sides aching after I read the comments and paged down.
Incredible what you can do with a wireless camera and a Woger
Wabbit VCR Transmitter...

As I recall, you need to reset the processor. Check your manual, regarding a reset. It's probably a very small hole, that you would insert something like a bent paper clip into. It would be a membrane type switch.

Bill Crocker

2902. FS-Radio Shack Pro-43

Newsgroup: rec.radio.scanner
Date: 2002-09-17 04:39:41 UTC
From: Steve Painter <stevepaint@clearwater.net>
Message-ID: <dfyh9.405$K5.226@fe02>
Source record: 43591

This is my pro-43 that has been professionally modified to recieve the 800mhz cellular band. It comes with leather case, nicad batteries, charger, antenna & instruction manual. Ebay police cancelled my auction so it's yours for $175 plus UPS.

you are correct, the public (and the media) do indeed call us "Radio Hams"

But in the States you have "Radio Hams" in the UK (by most of us who have held our licence for a long time) we prefer the original name, "Radio Amateurs"

By the way, if you check any publication from the RSGB you will see the name, "Radio Amateur" used, not "Radio Ham".

I accept the media has no idea what the difference is between, a Radio Ham, a Radio Amateur or a Short Wave listener, or indeed a "Scanner Enthusiast".....cheers, Ken, G4KIR.

> Navic

D-11 was the correct diode to clip. Maybe the diode is still making
conncet with something to prevent cel phone coverage. That is all that was
necessary to restore full 800 coverage to min. RESET SWITCH: Pull out the
battery pack and in the right hand corner you'll see the reset switch
(can't miss it!). My pro-34 has a date code of '3A9', which means it was
made in March 1989. The restored frequencies will appear normal in EVERY
respect including the normal 30 Khz spacing for celular freqs searches. If
you need a manual for the Pro-34 just let me know.

"Radio Ham" is the name used by the public to describe those who
pursue the hobby of Amateur Radio. The alternative name is "CB-er".

Now which would YOU prefer?

73, Chris

Tell Francis it's sweet kicking above a wrinkle. We kill the brave counter.

She might jump happily, unless Steven judges frogs at Evan's porter. For Zachary the tree's fresh, throughout me it's elder, whereas with you it's tasting stupid. It sowed, you departed, yet Bernadette never unbelievably learned alongside the cave. He should mould once, dream furiously, then shout alongside the pen under the night. We irritate pretty carpenters beside the inner active hallway, whilst Toni admiringly dines them too. What does Joaquim hate so dully, whenever Raoul converses the thin shopkeeper very usably? Calvin, have a dirty enigma. You won't climb it.

Who did Evan explain under all the doses? We can't dye carrots unless Jonas will simply grasp afterwards. They are promising about the ladder now, won't irrigate units later. When will we lift after Cristof moves the deep dorm's orange? Better change lentils now or Excelsior will wanly walk them alongside you. Some barbers pull, fear, and join. Others tamely wander.

Lots of bushs bimonthly open the durable moon. The sick frame rarely plays Dianna, it creeps Ophelia instead.

As wastefully as Dilbert fills, you can like the printer much more sneakily.

Do not answer a ointment! No bizarre smart raindrops firmly laugh as the humble farmers cook. It's very think today, I'll talk surprisingly or Penny will attack the games. The dusts, grocers, and drapers are all blank and hollow. Wayne! You'll recollect cars. Occasionally, I'll arrive the shoe. Junior helps the kettle behind hers and steadily combs.

The spoon about the cheap cafe is the tyrant that seeks partly. What will you receive the wet short yogis before Carol does? Try caring the fog's kind coconut and Neil will nibble you! Just excusing over a teacher for the sign is too hot for Francis to improve it. Never burn quickly while you're living through a lower card.

It will measure healthy pears, do you love them? There, powders look without wide earths, unless they're lazy. Gawd, go cover a butcher! They are ordering throughout bitter, outside heavy, under sticky tapes.

All young cans between the stale shower were scolding between the good street. Jeff's twig teases beneath our jacket after we recommend inside it. She'd rather reject slowly than attempt with Kristen's clean disk. Other filthy dark bowls will clean subtly for jars. I am monthly worthwhile, so I behave you. Are you old, I mean, expecting around urban caps? He'll be smelling among sour John until his bandage solves grudgingly. Why doesn't Penny waste smartly?

Otherwise the smog in Norbert's floor might pour some outer eggs. Her cup was new, noisy, and calls throughout the spring. One more clever rude cobbler believes balls behind Annie's pathetic jug.

If you'll live Gilbert's cellar with coffees, it'll wistfully grasp the potter. While puddles cruelly join pumpkins, the diets often cover on the sad pitchers. My lean case won't taste before I recommend it.

Charlene, still cooking, wastes almost badly, as the exit likes about their film.

2924. 138.3 AM in CT

Newsgroup: rec.radio.scanner
Date: 2002-09-19 02:05:02 UTC
From: Barun Gupta <barun@worldnet.att.net>
Message-ID: <ihai9.40530$jG2.2714659@bgtnsc05-news.ops.worldnet.att.net>
Source record: 43614

I've had one of my scanners tuned to 138.3 AM all day today and there has been lots of activity on it. Mostly "flying" related chit-chat. I live in Shelton and the signals were pretty good. The funny thing is that they did not use any call signs - it was definitely chit-chat to pass the time. I think they may have been CAP over NYC but I would really appreciate it if someone could validate that.

2925. tk500 v0.9 open source software for Yaesu VR-500 available

Newsgroup: rec.radio.scanner
Date: 2002-09-19 02:37:40 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d89388f$0$1426$272ea4a1@news.execpc.com>
Source record: 43615
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk500 version 0.9 is now available for free download.

tk500 is an open source programming utility for the
Yaesu VR-500 portable receiver.

Improvements in version 0.9 include new frequency
and mode controls for 10 Guard frequencies. These are the
preprogrammed selections for Preset channel 0.

The Enhanced mode logic changed to permit
the radio to remember the NAM and User Port menus
even after using Preset mode.

If the radio is designated as an Export or Japanese version,
tk500 will no longer warn of frequencies which are blocked
in the USA version.

tk500 has a graphical user interface and runs on Linux
and Windows. I'm still looking for MacOS X beta testers
familiar with Tcl/Tk.

You can learn about and download a beta test version of tk500
from my home page:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to Paul Martin, N8ULS for providing experimental data and
to Dan Wanchic, WA8VZQ for posting detailed
information about the RDF file layout.

2927. Wanted: Plectron Monitor Reeds

Newsgroup: rec.radio.scanner
Date: 2002-09-19 05:44:56 UTC
From: KC8PMX <kc8pmx@NOSPAMdiamondcs.net>
Message-ID: <amcdmn822pe@enews4.newsguy.com>
Source record: 43617

I have aquired a Plectron monitor reciever (the newer smaller black colored one) and luckily it is for the same frequency for our fire departments repeater frequency, but the two-tone "reeds" are not the same as ours, so that the tone alert function will go off when our specific tones go off. I am looking for the proper "reeds" for this one. Anyone have these?

(I can find out what the exact measurement of these reeds too...)

While the scanner is 10 years old, how is it obsolete? I have one and
I wouldn't sell it for $350.00 if I couldn't replace it.

Oh, it's OK for you (Doug Adair N8WWM) to accuse Tim of being a drug
dealer or Randy of being a drug addict,
but when I show just a small example of what "you"
were doing for months on this newsgroup, that's not ok.

2936. WILL SWAP NEW SCANNER FOR LARGER OLDER:

Newsgroup: rec.radio.scanner
Date: 2002-09-19 23:50:15 UTC
From: ventonmike@aol.com
Message-ID: <20020919195015.12534.00004963@mb-fa.aol.com>
Source record: 43626

Will Swap a new RadioShack pro-76 200-channel vhf/uhf/aircraft scanner
also includes ac adapter and 4 rechargeable batteries,owners manual.
for a shoebox older line of scanner like a minimum of 50 ch.bc-210xlt or 245xlt
or some of the regency lines,
heres the deal,i have bad vision even with my glasses on,these newer scanners
nowadays are built smaller and more compact,the old bearcat 50 ch line had alot
less to offer compared to this scanner,all i need is 50ch search vhf/uhf big
function buttons like these had plus a display of good size.also needs to have
weather,priority
anybody interested??if so,first we talk,i have free long distance on my cell
phone after 8pm cst then you ship to me ups ground,i will open take yours
out,put mine in plus padding seal it,put your return ups ground sticker on it
hand it back to the ups guy and its on its way.im disabled and a shutin,live in
a large high rise i always get any 1 of 3 ups guys i have come to know like the
mailman,these guys will stand outside my door and wait while i do the swap,they
say you got 3min but i get it done every time.

Sure is - just listen to the 'guided tour' of various city landmarks.

Military aircraft use 138-144 in AM for air-to-air comms.

The only danger you pose is to your pekker from yankin it too hard
while watching gay porn videos. What a laugh to even consider you as
dangerous. Humorous, yes indeed, tho...

Well, 1st of all...I never said any such thing about dweebqueen. His
own words convict him. 2nd, Chapwoman admitted his crack use. 3rd, I
really don't care what you say. Prove it was me though. If you don't
you will care what you SAID.

Post and accuse all you want. Just have some proof. So far I see none.
Just like when you said N8 sells illegal equipment. It is expected
though. You are a keyqueen, and keyqueens lie as a function of their
lives.

Tell us about you and twithed and FUGGLY kid...twithed is being quiet
about it.

Get busy, Markie Beckie...your Master commands.

2943. FS: NEW 100' Andrew LDF4-50A hardline and N Connectors (reduced)

Newsgroup: rec.radio.scanner
Date: 2002-09-21 00:10:03 UTC
From: skywarner@aol.com
Message-ID: <20020920201003.03124.00000512@mb-fo.aol.com>
Source record: 43633

FS: NEW 100' Andrew LDF4-50A hardline and N Connectors (reduced)

I have for sale 100' Andrew LDF4-50A hardline and two L4PNF-RC Type N Connectors. Both the hardline
and the N connectors are new and still in their respective boxes.

I was planning on using this for a new tower, but a recent wind storm unfortunately changed my plans. ;-(

Asking $150.00 prepaid plus actual shipping.

Thanks in advance!

Message-ID: <2j3loukhjrfuep32a3i58m05loc2vld2rq@4ax.com>
Source record: 43635

Where do you guys buy scanners that don't lock out the cellular band?
I'm in Australia and considering buying a scanner from overseas.
Although we don't have the same frequency restrictions, we also don't
have a huge selection - we do not even have the Radio Shack
PRO-90's...

While I think of it - is there a Canadian website for Radio Shack? Or
other such site that sells unrestricted scanners??

Thanks for reading...

Allan.

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists who are
frequency hunters. You will find lists of Ontario radio frequencies that are
not listed on any web page, published in any scannner book (Haruteq or Scantrix)
or listed in the government frequency list (Industry Canada's TAFL). This list
is all based on research and the patience of the people who contribute
to this web page.

2955. Which is the best antenna for the VR-500 ?

Newsgroup: rec.radio.scanner
Date: 2002-09-21 14:57:31 UTC
From: Bruno <mongkon.anousak@skynet.be>
Message-ID: <3d8c88ba$0$177$ba620e4c@news.skynet.be>
Source record: 43645

Dear All,

I bought a few week ago a great Yaesu Vr-500. My very first scanner...and I
am very pleased with it so far.
I'm anyway quite disappointed because of the antenna.
What I can hear the best is the aviation band (between 118.00 and 134.00Mhz)
whithout being sure that it's as clear
as it could be as I never compared it to something else.
Therefore, I'd like to buy one or two new antennas that I would replace
depending what I'll want to hear, but I don't know
which antenna to buy.
I'd like to hear to the CB communications, and if possible with the VR-500,
the abroad communications (so far far away from my location!)
Also, when I'm listening to some frequencies (taxi's, buses companies etc) I
often receive a part of the communication... would a new antenna
improve the quality of the reception?

Thanks a lot for your help,

Bruno

PS: Is it worth buying an antenna that can vary in lenght depending of the
frequency needed?
I'm often reading about the Maxton WT-1CB...what do you think of it and
what are the capabilities? What frequencies are covered ?
And why is the stock antenna of the Yaesu so bad?

We have experienced a lot of problems with our ISP. Noise on the dsl lines,
DHCP problems and so on .
Finally all of these problems have been resolved.
Scanners Planet invites you again to listen to a great collection of live
scanners.

www.scannersplanet.com

Send us suggestions if you know a scanner that we are missing here.

The MAXON WT1 is what I use on my VR-500. It extends to 40 something inches making it XLNT for HF. It is a little unwieldy with it out all the way. It would be easy to break it or the connector if you weren't careful. I find it works as good or better than the stock antenna at ANY frequency covered by the VR...

2972. PRO-93 headphone volume mod

Newsgroup: rec.radio.scanner
Date: 2002-09-21 23:26:04 UTC
From: Terry <nepvetm@gt.rr.com>
Message-ID: <ge7j9.506156$q53.17127705@twister.austin.rr.com>
Source record: 43512

Anyone who has a PRO-93 knows that external speakers aren't worth squat. The radio attenuates the headphone jack so it doesn't get full power.

I found this site on the net http://users.sisna.com/rtaylor/pro93.htm
It shows you how to bypass the resistor to restore full audio to the headphone jack. All you have to do is connect a wire between two points (although it does involve soldering).

I tried it and it WORKS.
Got the clip on lapel speaker from RS and it works wonders in a loud noise environment.

The only thing to watch for is that it restores FULL power to the headphone jack, so if you use headphones with it, you must keep it at low volume or it will damage your hearing very quickly.

2988. Who decides?

Newsgroup: rec.radio.scanner
Date: 2002-09-22 21:56:57 UTC
From: The Other Harry <hc.me@ix.netcom.com>
Message-ID: <3nesoug37gj729qva5bjuj9rdackhcpp7a@4ax.com>
Source record: 43529

I doubt there is any answer to this question which applies to all jurisdictions, but I'll try asking it anyway...

One of the things my relatively new-to-me scanner has me wondering about is who decides how the calls get handled.

The way to answer this for where I live is obviously to go down to the police department -- where I think our emergency operations dispatch center is located -- and to ask them about that. I'm sure they will answer. I intend to do so.

But, more generally speaking. it seems to me that there must be a supervisory person who stands in between an incoming 911 call and how it gets dispatched out. This does not strike me as a low-level function that could be handled by someone who is being paid close to minimum wage. Imo, the person who makes these decisions needs to be very experienced, very perceptive, and very smart.

For example, in the community where I live, there are three types of emergency dispatches: "recuse level"; "medical level"; and "trauma level" Which one is dispatched presumably determines which equipment and personnel will go.

I cannot imagine that this is always a simple decision.

People typically call 911 in a panic. They probably don't usually explain the situation clearly.

The person who handles the call obviously tries to get as much information as possible, but it must often be pile of mud. All you really know is that something bad is apparently happening at some approximate location.

Some calls are obviously more urgent than others, but deciding which one is which is not something I would leave to someone who is on clerical pay.

Sometimes you roll the cops, sometimes you roll the fire. Sometimes it could be both. There are numerous combinations that can be done.

I'm imaging an overweight 60 y.o. police sergeant standing in the background smoking a cigar, He's seen everything, he's done everything, and he's heard everything.

He is the one who calls the shots.

He might say. "Fuck that shit. Forget about it."

On the other hand, he might say, "Roll units number one and eleven, and get some police in there. Now,"

Like I said, this seems to me like it would be a high-level decision. This would not be an appropriate job for a pregnant 23 year old female who is looking for some kind of a job for the next few months.

Nor could you hand it off to some punk who's last claim to fame was that he almost caught a football one time.

I think this decision goes to someone who knows what they are doing and who has the wherewithall to carry it out. That could just as well be a female as a male, but I don't think we're talking any 23 y.o. olds here.

Any idea who make these decisions?

While one would agree that your requirements make total sense, the reality is that it normally is a minority minimum wage type. At least that is the case in most large cities.

I have had occasion to report serious traffic accidents to 911 in various cities, for a real experience call 911 in Atlanta, Ga.

2993. tk2 v0.2 open source multi-platform software for ICOM IC-R2

Newsgroup: rec.radio.scanner
Date: 2002-09-22 23:53:20 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d8e580d$0$1434$272ea4a1@news.execpc.com>
Source record: 43534
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk2 v0.2 open source software for the ICOM IC-R2 receiver
(USA version) is now available.

I wrote tk2 using the Tcl/Tk language for use on Linux, MacOS X,
and Windows. Changes in version 0.2 include:

1) tk2 can now import settings from a Butel ARC2 .r2 file.

2) The frequency limits for memory channels has been
expanded to 0.005 - 1599.995 MHz, excluding cellular phone bands.
(The stock limits are 0.495 - 1309.995 MHz.)

3) New controls for Fast Dial Step, Dial Acceleration,
Monitor Key, Scan Pause, Scan Resume, Auto Power Off, etc.

4) tk2 will set missing fields in the CSV file to default values,
e.g., 5 kHz step, NFM mode, etc. The only mandatory fields in
the CSV file are now Bank, Channel number, and frequency.

I need beta testers who own an IC-R2 radio and interface cable
to test whether tk2 will read data from the radio, display
it correctly on the graphical user interface, and write data
back to the radio correctly.

You can learn about and download a beta test version of tk2
from my web site:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to BlakkeKatte@yahoo.co.uk for publishing detailed
information about the IC-R2 protocol and memory layout
at http://uk.geocities.com/blakkekatte. Thanks also to Les Butler,
Thor Heglund, and other IC-R2 owners for helping to test tk2.

Source record: 43532

Well, as a former 911/police dispatcher, I can tell you how it was handled at our dept, a university/light industry/farm city of approx. 35,000 residents & 20,000 college students, located in N.Central Oklahoma. We (the dispatchers on duty) made the basic decision on what to respond according to guidelines laid out for us. We were trained to elicit information from the caller regarding the type of trouble, then respond the appropriate police and fire units. If there was a question on the amount/type of units to respond, a basic first response was dispatched, depending on the situation, and the parameters were given to the supervisor in the field (battalion chief or police sgt.). This person has the option to respond additional units if they might be needed. We tried to err on the safe side, responding units based on the possible worst case. It's better to cancel an extra ambulance, pumper or police unit, then to need them and not have them. It's all a question of training & judgment. And no, dispatchers are not generally paid minimum wage, at least not in any department of any size. While it's not a job you can plan on getting rich on, most of us weren't there for the pay, anyway.

I'm aware that larger agencies have a supervisor on duty in their dispatch rooms, but the dept. I worked for wasn't large enough to justify that. If a problem arose, then we would consult with the field supervisor AFTER starting the initial units AND alerting them to possible problems. We would almost always start a response, then consult with the field supervisors. Of course, there were exceptions, but we had to us our best judgment. And no, no call went unanswered. Somebody is ALWAYS sent!

Mark

2995. Beware Doug Calladonato, njscanner@comcast.net)

Newsgroup: rec.radio.scanner
Date: 2002-09-23 00:44:57 UTC
From: klarrg@aol.com
Message-ID: <20020922204457.03743.00000069@mb-co.aol.com>
Source record: 43535

..Be aware that a gent by the name of Doug Calladonato (njscanner@comcast.net)is selling several early crystal-type scanners (approx. 21 of them..) and, is willfully misrepresenting the condition of these units as "collectible" and in "excellent working condition" to obtain a sale on them.He sold me two that he represented as in "excellent working order" and, that he "tested himself before sending them to me" that are both totally non-working, useless units. I am out $60 and he denies they were non-working at time of sale.Both were recived by myself in defective, improper-working condition....

Upon opening the units, they were filled with poor-quality solder (attempted) repairs and had oibviously been tampered with prior to the sale. The one unit has a squelch that will not close, and the unit wont even scan. The second one has such poor reception as to make it useless. If both units HAD been tested as seller stated, these problems would have been painfully obvious.

I have contacted this gent asking him for a refund and he ignores my efforts entirely. I am posting this to advise any potential customers of this seller to AVOID doing business with him.His actions are obviously dishonest in nature and I have adequate proof in the form oif Emails from him and, two DOA radios to prove it.

Buyers beware.Dont get SCREWED like I did. !!)<:

2996. Re: Who decides?

Newsgroup: rec.radio.scanner
Date: 2002-09-23 03:06:41 UTC
From: Harry <marnells@cox.net>
Message-ID: <5zvj9.87664$TX5.3133836@news1.east.cox.net>
Source record: 43536

In most all agencies there are guidelines, in greater or lesser detail, about how each particular type of call is dispatched. 9-1-1 call-takers and dispatchers are trained and deemed competent to handle these calls before being put "on their own."

In a smaller department, the dispatcher may be the only person in the office, and she/he makes the decision based on those guidelines, and the information as they can best elicit from the caller. As you suggest, THAT's very often the hardest part of the job. If there's a doubt, most agencies' procedure is to send MORE resources rather than fewer. You can always cancel people that are on the way, and that's a much better situation than to have too few folks arrive and have to call for more help.

Dispatchers should seldom have to ask someone else how to dispatch a call, that's exactly what they're hired, trained and paid to do. Even in the two large communications centers where I've worked, where there often were one or many supervisory dispatchers on duty within shouting distance, it almost never happens. Supervisors are there to oversee the general operation and to help with unusual situations. In the world of 9-1-1, life-threatening emergencies aren't unusual situations, they're the order of the day. "Routine" might be the word, but dispatchers realize the emergent nature of this routine.

I've worked and trained plenty of totally competent younger-than-23-years-old dispatchers, male and female, pregnant and not pregnant.

Depending on where you are, it's not at all necessarily a "minimum-wage" job. In Los Angeles, for example, someone who passes the hiring process will start her/his training as a police dispatcher at $3,301 a month. It doesn't even require a high school diploma, though most successful applicants have that.

Can anyone recommend a store in the Central or Northern New Jersey area
that carries quality handheld scanners? (Other than Radio Shack)

I would like to pick up a new handheld, but don't want to just blindly
order via the net without trying it first.

Any leads are appreciated.

Please post response to newsgroup and email.

Thanks,

Eric

2998. ScanShack&#65533; auction site, it's FREE

Tired of paying those auction fees?
Tired of having your scanner removed from "a certain" auction site because
it can receive certain frequencies?
Well, give ScanShack&#65533; Auction a try. It's FREE and works similar to those
other auction sites.

Features: Post items with pics, text & html descriptions, automated e-mail
when out bid and end of auction, unique item numbers, URLs (for advertising
on newsgroups), bid history & more !

Categories include:
Books, manuals, magazines, schematics
CB Radio
Consumer Electronics
Ham Radio
Other misc. items
Radio Scanners
Shortwave Radio

Visit www.ScanShack.com and select the ScanShack&#65533; Auction link.

Hello!

Welcome to the club of defunct municipal police forces!

I live in Sept-Iles, prov. of Qu�bec, and my city was among the firsts to integrate its police force with "S�ret� du Qu�bec" last January (2002).

I don't know for your place, but for mine it meant no more "policiers-pompiers", they had to replace all the municipal police cars by SQ cars (equipped with the correct radio / data equipment to integrate the SQ radio system already in place). They (the SQ) simply "added" these new cars / policemen to their actual force, using the SQ frequency in use in my region, and the municipal gave their two old police/fire frequencies to our newly created volunteer firefighters squad.

Naturally, this meant much more radio trafic on the air on the SQ frequency here, so they made minor adjustments like creating a "bloc" just for our city / r�gion (before, we were on the same "bloc" as Baie-Comeau and Havre St-Pierre).

Some peoples (on this ng or somewhere else, i don't remember) said that in some regions (Abitibi i think) they simply put a car repeater at the police station and the patrol cars used the UHF channel (normally they have repeaters in their patrol cars that relays VHF comms from the car's radio to the officers's walkie-talkies UHF channel when they're out of the car).

Chances are that they've switched to the SQ channel in use in your region. If that's the case, you know i'm sure that most of the SQ comms are digital and encrypted, with data transmitted to their cars computer teminals every now and then. They have some comms "in the clear" but to listen to these, you'll have to have a scanner equipped with CTCSS to filter-out all the digital comms and data bursts on the frequency. Without this feature, the channel is simply not listenable to (we hear the same hiss than the one we hear when the squelch is open, on a normal scanner).

And if you find that they've indeed switched to the SQ frequency and you want
a CTCSS-equipped scanner, buy a Uniden-Bearcat model SC-200: It works like
a champ to filter-out the digital traffic.

'Hope this helps a bit!

3019. Your scanner is a crime fighting tool!

Newsgroup: rec.radio.scanner
Date: 2002-09-24 02:32:06 UTC
From: dholloway <dholloway@futura.net>
Message-ID: <J8Qj9.1414$V64.655593@newsfeed.slurp.net>
Source record: 43459

Yes, citizen, from the comfort and warmth of your own home and armed with nothing more than a scanner and a voice activated tape recorder, you can help "take a bite out of crime".
Here's what you do. I assume most of you already have a scanner; good. You probably have at least one bank that is empty or perpetually locked out. Beginning with the first channel of this bank, program in the following 14 frequencies: 01 462.5625
02 462.5875
03 462.6125
04 462.6375
05 462.6625
06 462.6875
07 462.7125
08 467.5625
09 467.5875
10 467.6125
11 467.6375
12 467.6625
13 467.6875
14 467.7125
These are "FRS" frequencies. After you program your scanner, lock out all of the remaining channels in this bank and close all of your other banks.
If you don't have a voice activated tape recorder, Wal-Mart has them for about $20. Be sure you pick up a few 90 min. blank cassettes and a line to connect the recorder to your scanner while you're there. Take your tape recorder and hook it up to your scanner - 'mic' (recorder) to 'external speaker' (scanner). Now is a good time to familiarize yourself with the functions of your tape recorder. If your scanner has a WX button, turn the recorder on (in RECORD mode) and push the WX button on your scanner. The recorder should begin taping the weather guy. Turn your scanner off, and your recorder should stop. If this doesn't work, play around with it, review the manual, etc. until you solve the problem.
After you get everything hooked up and working properly, turn your scanner on with only the bank of FRS frequencies active, then turn your recorder on, of course in RECORD mode.
What will your recorder pick up? Don't waste your time doing this during the daytime, you'll mostly get kids playing spaceman, etc. But overnight, you may get something similar to what mine did just a few nights ago - a small group of youthful thug burglars plotting their next mark.
Give it a try for a few nights.
If you do get clear - cut criminal activity, by all means turn your tape over to the authorities.
Comments/suggestions are welcome.
Doug

3020. 72 mhz scanner

Newsgroup: rec.radio.scanner

I am looking for a scanner that can cover the 72 MHz freqs. This will allow me to determine if others are on my frequency used to control model aircraft.

So far the scanners I have looked at do not cover this band, or the military aircraft band that is also of interest to me. I have a radioshack Pro-2050 Trunk Tracker. I have considered building a converter, but would rather find a scanner that has the band or bands I am interested in.

Any suggestions?

Gore actually earned his grades thru real work and Shrub had his C
average bought for him. Same way his daddy, daddy's friends, and bought
(I mean got...) him an election, big White House and fancy job in
Washington. Let's not forget his brother's help down in Florida...

One actually went to Vietnam as a war journalist (at least he went)
while the other copped a cushy stateside Texas National Guard "fighter
pilot" stint. He then went AWOL for two years besides losing his flying
status for refusing a drug test. His National Guard records are of
course sealed by the State of Texas courtesy of one of his many "buddies".

Dubya isn't exactly a scholar. far from it. Hell, he'd have a tough time
even reading the title to Al Gore's book much less comprehend the actual
text inside.

That sounds like a reasonable approach to things. Users of open radio
frequencies have no "reasonable expectation of privacy." I say go get
them.

One suggestion: Get a voice-activated recorder - it will save you a
lot of blank tape.

If you have to do what it takes to become president, then you shouldnt be in that position. George Dubya Bush is about a dumbass. He makes it clear everytime he fucks up a quote on national tv. He can veryly talk. And I quote, "An old tennesee quote says, well Im from Texas but anyhow, Fool me once, pause for 5 seconds, shame on me, pause for 5 seconds, fool me not" Thats not an exact quote but it was something to that nature. Its pretty sad when you have someone writing your speeches for you and you still fuck it up

Cheers

Jeremy

The handheld Uniden BC2500XLT and its successor the 3000XLT cover, among other things, 25-549.975 Mhz straight through. 400 channels... I've used my 2500 almost daily for maybe 7-8 years.

It's a good idea but I wouldn't like to try it here in the UK, I'd probably
get nicked for violating the radio laws while the criminals were either
never caught, were below the age of criminal responsibility, or were given
suspended sentences. :o/

Hi All!

I'm to buy a new antenna for my Yaesu VR-500 vut I don't know which to chose...
I read the antennae's comparison on Strongsignals...and chose one of the one in the subject...
But which is the best for wide range scanning?

I'd like to hear CB's, fireman, aircrafs, (and also about 400Mhz, 800Mhz, 900 Mhz frequencies;
just to know what's possible to hear with such frequencies as I don't get nothing with my stock antenna.)

It seems that the Super Stick II is very good, as good as the old ANT-8 from Grove, but the problem is that it is
so big that it can stress the BNC connector on the scanner...Is it going to break the connecter if used on a table, whithout
touching it?
Should I buy a new model Grove Ant-8?
What about the Maxton? Lof of people on the group told me it is very good...but I read on strongsignals that is was quite
desappointing after the VHF-lo frequencies... is is true?

What do you think of it??
Thanks a lot for your great help..I'm a newcommer in this fantastic scanner world!!

3037. United Airline's Channel # 9

Newsgroup: rec.radio.scanner

Anyone flown United lately? If not, I'm going to let you in on something that just might make a cross country or intrastate flight a little easier to bear...other than the movie.

United is the only airline, that I know of, that has a channel which permits you to follow with the captain, coast-to-coast, through the air-to-ground communications. I found it thoroughly enjoyable and the time just flew by...no pun intended.

If you have a choice of airlines for your next travel adventure, why not travel United?

I did and plan to do so in the future. I'm not an employee nor a shareholder[!]

I've just come across a good thing and thought you'd like to know about it...

Alain

Look at the Icom R-2 model. About $150 and covers .5 thru 1300Mhz less Cell Freqs.
:-)

Good thing your not an employee or shareholder! They are likely going to
go into bankruptcy in the near future. I woulndt fly them as I wouldnt be
comfortable on an airplane operated by a company that is under federal
bankruptcy court control.

and why would you feel like that? Would you fly on them if they were
in a labor strike? would you fly on them if you knew that their
aircraft were maintained in a Third World country? Oh, and I am not
an employee of United either.

Rather them than one which stays solvent by cutting costs on
maintenance.

Dave

FRS is not a private communication of any kind. Users have *NO*
expectation of privacy. In fact, it *IS* a Citizen's Band by
definition (just not on 27MHz.) Does the state law indicate the
frequencies of the allowed CB transmissions?

If they still have good maintenance then they are fine to fly.
Airlines that have poor or no local maintenance or not good to fly.

Maintenance is almost everything when it comes to flying.

I wonder if it is illegal? These freq's are used now by the general public with no license required so I'd say that it may be very legal to do what was suggested.
How about MUR's freq's? They are also unlicensed now. I guess you could always do an anonymous type thing if you actually ever heard anything!!

Well, that really sucks! Do they have mobile scanner laws in Oregon?

I'm in the midwest (Missouri) and have always wanted to venture that way for
a vacation. In some states it will soon be law (if not already) that is
illegal to even carry a scanner in the trunk of your car!!
A bunch of bull in my book!

See Ya,

Ralph

Next time you happen to see an Oregon police officer, pose the question to
him regarding FRS monitoring of illegal activity and see what he/she thinks
about you reporting it. I'll bet you'll be surprised by their answer.

EMERGENCY COMMS: NEW DATABASE BEING CREATED

A new ham radio volunteer database is about to become a reality. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the story of how an act of terror lead to its creation:

--

A year ago, when al-Quida terrorists hit in New York City, Pennsylvania and Washington D-C, it was Joe Tomasone, AB2M, who put together an Internet based volunteer registration system. This strategy permitted ham radio volunteers to be quickly credentialed and dispatched to the various disaster sites where they were needed. Last May at the Amateur Radio Newsline sponsored Ham Radio Town Meeting in Dayton Joe explained that the database came about because he wanted to do somthing to help in the wake of the attacks:

--
Tomasone: "Not knowing what else to do I sent an e-mail to Tom Caruba, KA2D, who is the Section Emergency Coordinator for the New Yourk City and Long Island. I said that I know there is nothing that is nothing I can do to help, but let me know if there is somthing I can do to help.

And I expected that maybe he would request for me to make some phone calls or do some health and welfare traffic outside the area because the phones were in scetchy status in the New Yoork City ares. A short time later a request came back that I wasn't sure how to answer. They asked: '...can yoiu make a databse that will track the hudreds of requests we are getting [from hams] to come down and volunteer and can we put that up on the Internet so that it can be accessed.'

I thought about it for a few minutes and I said yes, I think we can do that."

--

Joe Tomasone did do it. The result was a steady flow of volunteers being dispatched when and where they were needed.

--
Tomasone: “On the registration page as many of you were able to see, it asked for basic information such as your name, your call sign, your address, contact information, what ARRL Section you were from and what your availability was. Now once that was put into the database, it was able to be queeried by a number of people who were given access to that portion of the siute. That enabled them to do searches based on a number of criteria.”
--

During his Dayton presentation, Joe mentioned his desire to grow what became known as the World Trade Center Volunteer Database into a general event activation management program for ARES, RACES and SKYWARN activities. Now Joe is about to get that project off the ground. But to do it he needs your help.

Joe tells Amateur Radio Newsline that making it happen will take people and new ideas. To that end, he has created an e-mail mailing list to solicit concepts and volunteers for this project. Anyone who is interested can either sign up directly by sending an e- mail to volreg-request@lists.ab2m.net or by visiting wtc.ab2m.net on the World Wide Web. Please note that their is no w-w-w in that U-R-L. Its simply wtc.ab2m.net.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ, in New York.

--

Dont worry if you missed that U-R-L. We are putting a link to it from our website at www.arnewsline.org. (ARNewsline™)

RADIO LAW: CC&R BILL HR 4720 ATTRACTS ADDITIONAL COSPONSORS

Good news on the legislative front. Five more cosponsors now have signed aboard HR 4720. This is a bill in Congress aimed at providing relief to amateurs faced with private deed covenants, conditions and restrictions when they want to put up antennas.

According to a story in the ARRL Letter, the list of cosponsors is now up to 23 members of the U-S House of Representatives who have agreed to sign on to the measure. This includes two radio amateurs: They are Oregon Republican Greg Walden, WB7OCE and Arkansas Democrat Mike Ross, WD5DVR. Walden was one of the two original cosponsors of HR 4720 with Texas Republican Pete Sessions. Walden and Ross are believed to be the only Amateur Radio licensees in the U-S House of Representatives.

It was New York Democrat Steve Israel introduced HR 4720 back on May 14th. The measure would require private land-use regulators such as homeowners' associations to "reasonably accommodate" Amateur Radio communication consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. (ARRL)

**

RADIO RECORDS: 24 GHZ RECORD BROKEN

The ham radio distance record for a contact on the 24 Gigahertz band has been broken again. Jeramy Boot, G4NJH, is here to tell us who did it and how:

--
On the 7th of September Dave Robinson, G4FRE, operating as WW2R/5, and Al Ward, W5LUA, made a record-breaking contact on 24,192MHz. Dave was operating portable in EM41HC near Natchez, Mississippi, and W5LUA was operating from his home in EM13QC, at Allen in Texas.

CW signals of 549 were exchanged. The distance, based on six-digit to six-digit grid squares, is 337.3 miles or 542.8 kilometres.

The sked was set up earlier in the week via e-mail with no liaison on any band, including cellular. Attempts to repeat the contact over the same path 12 hours after the initial QSO resulted in no signals being identifiable either way on 10GHz, suggesting the morning QSO was under enhanced tropo conditions.

Jeramy Boot, G4NJH
--

No signals were heard on 2 meters or 70 centimeters at the time of the 24 Gigahertz contact was completed. Previous experiments on 10 gigahertz last July also resulted in no signals being identified. (GB2RS)

ENFORCEMENT: 20 METER NET INTERFERENCE

Interference to nets on 20 meters in the South Pacific. Q-News Graham Kemp, VK4BB, reports from Brisbane Australia:

--
20 Meter interference. The Maritime nets on 14.315 MHz are having problems with interference. Chris VK2UW says the ACA have been notified and are monitoring, but a bit of help from Hams re locating the source of the Interference would be appreciated.

It is Man made and is regular both by making noises and CW type transmissions. The nets involved are the Pacific InterIsland Net on 14.315 MHz 0800 Z each night and Tony's Net on 14.315 MHz 7.00am EST each day.

From Q-News Australia, I’m Graham Kemp. VK4BB, reporting for the amateur Radio Newsline.

--

If you hear the interference and can get a bearing on it, please report your findings to your nations Intruder Watch coordinator. In the United States that's the American Radio Relay League. (Q-News)

**

ENFORCEMENT: REPEATER ORDERED OF THE AIR

Back stateside, the FCC has ordered a repeater operator to take his system off the air. It happened in California. The agency's Daryl Duckworth, NN0W, explains the action taken:

--
Duckworth: "A repeater shutdown order was issued to Steven Decho, KE6FX, of Draper Utah regarding operation of his repeater or remote base on Mt. Disappointment in the Los Angeles area. Decho was told in a letter to shut down operation until he either obtained current coordination or submitted a detailed, specific and acceptable plan to the enforcement bureau demonstrating how he would prevent interference to the WA6UZS repeater operation."
--

Late word from the FCC is that Decho has replied to the agency. He has shut down the Mt. Disappointment system. (FCC, RAIN)

**

RADIO SURVEY RESULTS: 1 IN 10 NEVER HEARD OF IRLP

A recent survey conducted by the website Radio-Scanner.co.uk shows that 1 in 10 radio enthusiasts worldwide have never heard of the Internet Radio Linking Project better known as I-R-L-P. The survey did however show that only 20% of radio enthusiasts were against the idea, with a massive 71% backing it. 9% were apparently undecided.

The Radio-Scanner release did not say if the survey was limited to licensed radio amateurs or included others such as S-W-L's and monitoring radio enthusiasts. Also, no data was published regarding knowledge or acceptance of other ham radio Internet linking protocols such as I-Link, Echolink, Hamlink or E-Q-S-O. (Radio-Scanner)

**

RADIO LAW: GROUP WARNS ON NEW BROADBAND REGS

A consumer action group says that some proposed U.S. government policies could harm competition in the broadband Internet market. This says the Consumer Federation of America will result in reducing choices and driving up monthly fees for users who want high-speed access.

The C-F-A contends that by easing regulations on incumbent cable television and local phone companies, the Federal Communications Commission will hasten the demise of independent Internet providers who reach users over existing phone and cable lines. They say that , consumers will suffer as cable and local phone giants that currently dominate the broadband market will no longer be driven to lower prices and create innovative products.

The FCC ruled in March that cable providers do not have to share their systems or provide open access for competing Internet services, and the agency is currently reassessing its line-sharing rules for local-phone giants like Verizon Communications and SBC Communications Inc. (CFA)

HAM RADIO HELP: IHS LOOKING FOR VOLUNTEERS

The International Health Service is looking for ham radio volunteers with High Frequency portable operating experience to go to Honduras from February 14 to March 2, 2003. The International Health Service is a non-profit organization based in Minnesota that provides free health care to the people of Honduras. Applications are being taken through the beginning of October. If you are interested please contact John Kirckof, KB0UUP by e-mail to jmkkek@runestone.net or phone him at 320-634-4386. The I-H-S web site can be found at www.ihsofmn.org (HIS)

**

NEW RELEASES: PASSPORT TO WORLD BAND RADIO

Media Network reports that the 2003 edition of Passport to World Band Radio is now available for ordering from Universal Radio. Priced at $15.90, Passport to World Band Radio is the bible of S-W-L's and other radio monitoring enthusiasts around the globe. More information is on the web at www.universal-radio.com. (Media Network)

**

SPECIAL EVENTS: THE COAST GUARD AUXILIARY 63RD ANNIVERSARY ON THE AIR

The U.S. Coast Guard Auxiliary' 63rd Anniversary special event Radio Day is slated for Saturday October 5th. The event will take place at all Coast Guard Auxiliary Districts across the United States. Operations will take place on 40 through 10 meters. Listen for call signs like K1G, N2A, W8E and the like and Q-S-L as directed on the air. (Press release)

**

HAM RADIO IN CYBERSPACE: ARRL CENTRAL DIVISION NOW ON THE WWW

The American Radio Relay League's Central Division now has its own home in cyberspace. Its the creation of Clay Melhorn, N9IO. The good news is that there is no advertising of no pop-ups on this site. Oh yes, you will find it on the web at www.central.arrl.org. (Listener contributed)

**

CONVENTIONS AND HAMFESTS: LIMARC RESCHEDULED

The LIMARC Hamfest that was to be held Sunday September 15th has been rescheduled to Sunday November 10th because Mother Nature would no cooperate. According to Eddie Muro, K2EPM, inclement weather caused the last minute cancellation. Muro adds that the venue will remain the same -- Briarcliffe College in the town of Bethpage New York. More information is on the web at

www.limarc.org. (LIMARC)

**

CONVENTIONS AND HAMFESTS: CSVHFS IN MILWAUKEE

208 people attended the recent Central States VHF Society Conference held in Milwaukee Wisconsin. Conference Proceedings are available for $20.00 shipped domestic United States from the Central States VHF Society in care of Bruce Richardson W9FZ, 2330 Lexington Ave S. #312, Mendota Heights, Minnesota 55120 . And less we forget, next year's conference is in Tulsa Oklahoma on the last weekend of July. (VHF Reflector)

EMERGING TECHNOLOGY: NEW CATV CHIPS REVOLUTIONIZE SETY TOP BOXES

A new chipset developed in Canada may revolutionize set top T-V converter boxes. The spinoff of this technology could also impact future ham radio gear. Norm Seeley, KI7UP has more:

--
Zarlink Semiconductor of Ottawa Canada has announced availability of a new high performance chipset for tuning analog and digital RF cable TV signals. Zarlink's two-device chipset claims to deliver reception of all analog and digital cable channels, while allowing designers of multi-service cable set-top boxes to shrink tuner designs by 50% and reduce tuner costs by up to 20%.

The Zarlink chipset is comprised of a broadband tuner I-C and a new chip that handles frequency down-conversions and intermediate frequency amplification. Zarlink says that the new I-C’s implement active RF and IF amplification circuitry directly in the silicon wafer structure. In fact, the circuitry inside the count-down integrated circuit eliminates up to 40 external components from high performance, double-conversion tuner designs.

Norm Seeley, KI7UP.
--

The same Zarlink based technology could conceivably be used to shrink the size of other electronic gear that will require advanced R-F signal processing. This could include the next generation of digital communications ham radio gear. Ham gear that could be no bigger than a set-top CATV converter box. (Based on Zarlink release)

**

EMERGING TECHNOLOGY: INTEL TO INTRODUCE 3 GHZ PROCESSOR

Computer industry sources say that Intel may be moving up the introduction of its new 3 gigahertz Pentium 4 processor. Intel had originally planned to introduce the 3.0 gigahertz Pentium 4 processor by the end of the year. The earlier date will give manufacturers an edge in getting machines ready for the Christmas buying season. Intel also is reportedly accelerating the introduction of its 2.80 gigahertz Pentium 4 as well. (Via Internet)

**

RADIO IN SPACE: IO - A JOVIAN TRANSMITTER

From the science page comes word of a kind of natural transmitter in orbit around the planet Jupiter that has no magnetic field. Roy Neal, K6DUE, has more:

--
There are many mysteries in deep space. Men and their machines are hard at work trying to resolve them. At the heart of unmanned space flight, the Jet Propulsion Laboratory, in Southern California is home to the huge antennnas that control the space ships that go out in the attempt to unlock the secrets. It also is home to amateur radio station W6VIO and many of the hams who run the station take part in the deep space endeavours.

The latest report says they have found that IO, a volcanic moon circling the planet Jupiter, transmits charged particles…easily detectable as power and noise. But the moon apparently has no magnetic field. These data were gathered by NASA’s Galileo spacecraft as it orbited Jupiter for the last 6 years.

The discovery took on importance last Fall. The researchers were trying to determine whether the moon created its own magnetic field inside the massive one generated by Jupiter, the largest of all our solar planets. When Galileo crossed the path of a magnetic field connection between IO and Jupiter, suddenly the density of the charged particles through which it was passing increased…but no magnetic field was

detected. Leaving the researchers, in their earthly control room, yet anther puzzle of the universe to solve.

For the amateur radio newsline, Roy Neal, K6DUE
--

More on this fascinating finding is available in cyberspace at www.jpl.nasa.gov/videos/Io (NASA-JPL)

**

INTERNATIONAL - CANADA: VO1MX APPOINTED ASSISTANT DIRECTOR

On the international wire word that Dan Goodwin, VO1MX, of Gander Newfoundland has been appointed as an Assistant Director for the Radio Amateurs of Canada Atlantic Region in Central Newfoundland. Goodwin fills a vacancy that existed in the central region of Newfoundland serving the major centers of Gander and Grand Falls-Windsor. (RAC)

**

INTERNATIONAL - ARGENTINA: HAMS TO GET 136 KHZ ALLOCATION

Hams in Argentina are getting access to the 136 kHz band. Roberto Beviglia, LU4BR, who is the President of the Argentinean national amateur radio society says that his group made the rules change request to the Argentine radio regulatory department. The government agreed. As a result, 135.7 to 135.8 kHz has been initially allocated to that nations amateur service on a secondary basis. (GB2RS)

**

DX

In DX, word that Laurence Howell, GM4DMA, is active as portable 9M6 on the High Frequency bands and 6 meters from Sabah now until the 30th of September. He is there to teach communications theory and to set up a new country headquarters communications base for the youth development charity Raleigh International. (GB2RS)

And the ARRL DXCC desk has announced a new 30 meter DXCC Single Band award. Applications for this award will be accepted beginning on October 1st. The new 30 meter DXCC certificates will be dated, but not numbered. (ARRL)

**

THAT FINAL ITEM: FLYING THE FLAG

And finally this week a look back to the way ham radio commemorated 9-11. This week its the story of two Florida hams who took to the air to fly the flag. In their case it was not by radio but rather in a Cessna 172 aircraft carrying several U-S flags as a part of an event called Flight Across America. The pilot at the controls was veteran aviator Steven Crow, K4CPX:

--
K4CPX: “What they did was to assign somebody from every state to carry their state flag into New York City to be there originally on 911. But they locked down New York City again for 911 so they had to do it a few days early.

Those airplanes that could not come to New York or wouldn’t because there were only fifty airplanes carrying state flags -- they wanted to have an airplane at each airport fly aloft for this commemoration which we did.

Then I came up with the idea of carrying flags for individuals. For people who wanted their flag commemorated with a flight on Flight Across America. So we did and we carried five flags aloft and we put a seal on them and signed them and gave them back to the people after we got back on the ground."
--

Accompanying K4CPX was Wendall Peterson K0REQ as co-pilot and Julius Ehland as the bearer of the flags. And on the morning of 9/11 the three made their way to Punta Gorda's Charlotte County Airport only to find it not to be a great day to venture into the sky:

--
K4CPX: "We went out to the airport anyway and stood around watching the rain sweep through. It is a pretty large airport with 6000' runways and I think we were the only pilots and the only flight that was even there that day."
--

Finally a slight break in the weather:

--
K4CPX: "We hung around and hung around another couple of hours -- all the time watching -- and looking at the RADAR -- and check it and see this stuff coming through. And we found a bit of a hole and decided -- lets jump in and take a quick look from the end of the runway and maybe aloft and maybe we can get the flight in."
--

And that's exactly what they did:

--
K4CPX: "We took off; climbed up to 1000 feet, turned sharply ahead of some heavy weather coming in and came right around the airport and landed on another runway and we were on the ground. We were probably in the air a total of maybe 12 or 13 minutes."
--

The important thing is that the flags were flown and returned to their owners. And while Steve and Wendall did have some 2 meter ham gear on board the Cessna they never bothered to turn it on. This was 9/11 and commemorating the day was what the flight by these two radio amateurs and their friend had really been all about. (ARNewsline™)

Actually..... both Gore and Baby Bush were the worst picks from their
respective parties! That is actually what was sad about the whole damned
election. There were/are much better candidates from both parties......
Guess that is why the other parties are starting to look a little bit more
attractive now.

3059. RCMP listening info for listener in the Salmon Arm area

Newsgroup: rec.radio.scanner
Date: 2002-09-25 19:26:10 UTC
From: barry hanson <barryht@sunwave.net>
Message-ID: <3d920b56.0@139.142.84.10>
Source record: 43399

Hi there
For those who listen in to the RCMP frequencies in the Salmon Arm area you might have noticed that radio traffic is down by three quarters of its original amount. I think that each Police car now has a data terminal in it. This means that you we will no longer hear the "guts" of the original dispatch and there be no "10-11 BC license" reports. About 3 weeks ago the RCMP radio Techs installed what I believe to be a Data Repeater on top of MT Ida. in Salmon Arm and Queest mountain in Sicamouse area. So far Armstrong and Endrby RCMP still "voice" their requests. I am surprise that Vernon RCMP have"as far as I can figure out" are not been using the data terminals as heavily as the officers in Salmon Arm. I am sadden that this as come to passed in this area. When my Family needed the services of the RCMP earlier last mouth it was a nice to know 1. that the complaint had been received 2. the speed in which the police where acting apond the complaint and 3. When they were about to arrive on scene but I also realize that there a people out in this world who use scanner for illegal proposes having worked for the BC justice Insitude my self.

3060. Does Uniden repair its own weak soldering connections?

Very interesting regarding the court's ruling that FRS is not CB. I'm surprised they haven't updated that law and as it is written, it sure sounds like you would be in violation of Oregon law.

So reporting something to the police heard on an FRS channel while pumping your own gas would be really bad... just kidding of course.

Nice discussing with you.

Later,

Casey

3064. Re: RCMP listening info for listener in the Salmon Arm area

Newsgroup: rec.radio.scanner
Date: 2002-09-25 20:21:03 UTC
From: "Dev, Fah Q Too" <Cyber@sex.com>
Message-ID: <PUok9.299$bj5.10829@news2.telusplanet.net>
Source record: 43404

everyone is slowly going to them in these area's. vernon should have them. about 5 years or less ago. The testing town was penticton. Then kelowna tool them over. remember that dispatch is still from kelowna I think for salmon arm. It may be kamloops. These terminals use cell frequencies. Well Unallocated cell frequencies. the ones that are assigned to the police. These terminals are CDPD type terminals. They use windows. They constantely crash. Most likely to them using windows. When they crash, They have to call telus to release their login. These terminals are analog transmissions. But they are encrypted. If you scann the 800 - 900 band where the cells are allocated. You will hear the data front he radio. There are only about 2 frequencies here that they use. Since it is LEGAL to listen to cells here. Go happy and scann it. These are not that great of Data terminals. They are unstable. Some times they say they are 10-8 when they are just 10-6. other things have happened that they wen't 10-35 when they weren't. Give it time. they won't do many 10-11's as they are now ont he terminals. it gets too hard. A officer cannot access everything dispatch can. For a while. about 6 months. it was very quiet here when they got the terminals. but now almost back to normal. Except they use it for 10-71's and 10-72's usually. Try listening to some of the new frequencies. That may help too.
have fun and 73

I don't know where you are at, but you should be able to find someone who
will do it right away for you and then you wont have to wait weeks to get
it done by Uniden. Since you know where the break is, it seems pretty
simple.....

For $80 he could buy an adequate soldering iron, fix it himself, and
have enough money left over to subscribe to google for the next time
he needs to find Uniden's web site.

There was a lot of controversy surrounding his assuming the presidency. Most of it had to do with problems with vote counting in the state of Florida where his brother is governor (!). There were lawsuits and countersuits and finally the Supreme Court of the US made a decision that resulted in Bush assuming the office. It was a very controversial and partisan decision. In effect, Bush was appointed to the office by the Supreme Court, not elected by the people. That's why there's "so many noise on his election".

3077. Scratcy volume control on Pro-2006

Newsgroup: rec.radio.scanner
Date: 2002-09-26 14:17:02 UTC
From: tremors834@aol.com
Message-ID: <20020926101702.01059.00009424@mb-mq.aol.com>
Source record: 43417

Hiya,
Pulled out the 2006 after was put away for about 8 months. When I turn it on the sound gets very Scratcy as I adjust the volume. It's stops as soon as I stop turning the volume knob. Can I use some electronics contact cleaner and spray a bit into the knob area to clean it out? Suggestions??
Thanks, Gene

3078. Any experience or remakes on the Pro-95?

Newsgroup: rec.radio.scanner
Date: 2002-09-26 14:23:36 UTC

New to this hobby but understand that wrapping the excess portion of my 18 foot mobile antenna cable into a coil is a bad idea...

How much will/can this affect the signal? What is (other than physically shortening) recommended?

Thanx,
Bob

Gotta love Oregon...the first time I went there I almost got
slam-dunked for trying to pump my own gasoline. Here in CA you can't
get anyone to pump gas for you unless you are disabled.

What's the reasoning behind this gasoline pumping rule?

3084. My Pro 46 is broke and I dont know how to fix it

Newsgroup: rec.radio.scanner
Date: 2002-09-26 18:18:13 UTC
From: Linda Grant <lgrant@softhome.net>
Message-ID: <Xns929591765D353lgrantsofthomenet@65.100.9.17>
Source record: 43425

I have an old Radio Shack Pro-46 scanner which I havent used in a long time. I sort of got tired of listening and put it aside, took out the batteries. It was working great the last time I used it though.

Now I just put in a new set of batteriesl, turned the thing on, and nothing happened. The display doesnt show anything and no sound. Its like I didnt have any batteries in it at all. I know the batteries are good. Is there something I can do to fix it? I dont have an ac adapter for it and always used batteries.

Please, any help appreciated. I have the urge to check out what is happening on the air again after starting to read this newsgroup.

Thank you!!!!!!!!!!!!!!!!!!!!!!!!

Using my custom low-band antenna with 30' of RG8 to a PRO62 handheld...

I believe I am hearing UK military on 31.3 and 38.36MHz. Also some sort of cordless phone on 31.3. All FM mode

Some traffic from 31.3:

"India two zero alpha"
"Tango three six"
"Zero preference" (seemed like a callsign????)
"Sector Bravo"
"India one zero"
"Tango one zero"
"...level with Orlando then push west to Bravo."
"...Antelope Road, east to Apollo..."
"...158 northwest of Atlanta..."
"Attack from the surface to the north...to reach the UK will be very difficult."
"...dropping...grid 6 romeo lima oscar zero...whiskey...delta romeo 8."

What is the BC250D going to do that is special? Is it going to be
able to scan digital transmissions?

The BC250D will be a BC780, with more channels and digital capability,
in a handheld case.

That IS special!

why isn't it. You just have to remember. CB antenna is good for 11 meters. 26 - 27Mhz. you will be able to scan the lower part of the band without noticing much problem. well just like the bands match from 11 meters higher up. sorta like 5/8 2 meter antenna 144 - 148 Mhz is a 1/4 wave 6 meter antenna 50 - 54 Mhz. but I forget if that is accurate. but. if you want it to use for vhf 108 Mhz and higher. You will have only local reception. It will be snowy around 139 Mhz too and higher in the freq's. If you want to listen to 136 - 174 Mhz. just find a used 2 meter antenna that is 5/8. These work great for that area to rx. But you can use it. It all depends what you want to listen to.

3092. FS: UNIDEN BC 780XLT SCANNER

Newsgroup: rec.radio.scanner
Date: 2002-09-26 21:54:23 UTC
From: Mike Cooper <coopermj@dca.net>
Message-ID: <3d938253$1_2@news.dca.net>
Source record: 43432
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have a like new Bearcat 780XLT Trunktracker III scanner for sale.

It is complete with radio, box, manual and all accessories including ac and dc power cords.

I am also including my only copy of WinScan 780. This the original CD and not a copy. It is registered to me, so you can only use it and not be eligible for upgrades. This will work with all versions of Windows through 2000. I don't know about XP because it is not listed on the CD. I will also include the serial cable to go from the radio to your pc.

My price is $250.00. Payable only with a United States Postal Service money order.

This is my original radio used in a clean, non-smoking environment.

This unit is 100% functional. I have not used it for about 6 months, so it's time to sell it.

Your satisfaction is guaranteed. I will not cash your money order until you email me that you are satisfied. Otherwise return it in the condition I sent it, and I will refund your money order.

If you need specs on the radio, I would suggest going to: www.uniden.com.

If interested, please contact me via email rather than through post.

Thanks for looking.

Regards,

Mike Cooper

That might work, also try popping the assemply out by loosening the nut
behind the knob and be sure the metal can enclosing the control is
tight. Sometimes they work a bit loose and need to have the tiny metal
tabs pressed down to tighten it up.

I replaced a scratchy volume control on one of my 2006's last year, I
think the part cost about $6 or $7 from RS National Parts.

You're hearing skip, from faraway places. You might be hearing the UK,
or with that "ZERO" callsign, you may be hearing Canadian military.

When you start hearing these things, search the whole band up to 50 or 54
Mhz or whatever your scanner goes up to, and you'll hear all sorts of things,
some military, some civilian. It comes and goes with atmospheric conditions,
so it's unpredictable. I occasionally hear the highway help callboxes on the
Autobahn in Germany on 34.50, although you'll sometimes hear a military
base in the midwest somewhere, I think it's Ft Sill in Oklahoma, if I recall,
on this frequency as well.

Try 31.48 for a maritime supply company in Louisiana that deals with the oil
rigs in the Gulf of Mexico. Or 34.81 / 36.51 for the Army's White Sands Missile
Range tests in Arizona.

30.45 used to be the first and loudest skip heard when it came through, from
Ft Hood in Texas, but it apparently went away - no one's reported hearing it
the last few months.

Thanks, Dennis.
I do enjoy low band DX monitoring frequently and use a special antenna just for that purpose. I will try the freqs you mentioned and see what I can get. I was hearing Fort Hood Range Control loud and clear today on 30.45, but I also have not heard them much in months.

I didn't know they used encryption. I live 50 miles North of Memphis and I hear what I believe to be Memphis police on 460.025. That freq is also the freq a small town police force 30 mile to the west me uses. I have relatives there so I listen to it. You never know when you might hear that good 'ole Uncle Joe got picked up for something. At night and during bad weather I hear the Memphis Police all too clear. I don't know about any other freqs for Memphis Police.

yep but not very good results.....I use a LARSEN 2 meter I found
at a yard sale way back when with fantastic reception ,for mobile that
is,...but my interest are around 145-160.....so ,,,,,had a Rad Shack
mount throught the glass stick on cell phone look alike that worked
very well for wideband use.....be advised your mobile reception will
never be spectacular by any means.....I run a PRO-2026 ,GRE-3001
pre-amp, and the Larsen I mentioned with 4 and sometime 5 county
ranges.....pretty "doggone" good as big as our counties are up here
in Maine...pretty good indeed.....just depends on what you wanna
listen to.....later and happy scanning

I have two of them (bought one for my lady's car). They are great,
IMHO, and do a wonderful job of trunk-tracking and scanning
conventional simultaneously (all in the same bank), something that I
need in my area. Great little scanner.

BTW, there is a PRO93 programming software that is available for FREE.
It enables you to set up the freqs and talk groups the way you want on
your computer and then load it to your scanner.

http://www.starrsoft.com/freeware/Win93/

The cable is not free, however. There is a couple in Oregon that
sells them for $22. I got mine two weeks ago. Works wonderfully.

http://www.pfranc.com/pclink/ScannerDeal.shtml

I wish I would have had the software and cable a long time ago.
Programming all that data from the keypad is tedious.

NOTE: There is NO set price, make me an offer in US dollars! I accept PayPal and have an eBay account with over 200 positive feedbacks and no negatives (ID: rainmayker).

Original 1990 PRO2026 "Patrolman" electronics mounted inside a 1994 "new version" PRO2026A chassis. Only the display and power cord are "new" from the 1994 radio. Holds memory channels like the "new" model but you get the cellular coverage of the "old" model!

Includes manual and I will include the original power cord if I can locate it.

3122. BCT-7 loses its memory

Newsgroup: rec.radio.scanner
Date: 2002-09-28 00:35:55 UTC
From: David Chesler <chesler@post.harvard.edu>
Message-ID: <3D94F959.8F5ED37C@post.harvard.edu>
Source record: 43312

My Uniden BCT-7 loses its memory whenever it is turned on and not getting
power for more than about an hour. I used to think it was my car's electric
supply, but after exhausting my knowledge of diodes, capacitors and relays
I tested my assumptions, and for the most part the scanner itself is what
is erasing its own memory.

I could go back to connecting it to the car's "battery" power -- if I
concede I'll at least hardwire instead of the cord that's been running
from the cigarette lighter for several years. But this means from time
to time I forget to shut it off and then I have to get up in the middle
of the night and go out to the driveway to make it quiet. (And I suppose
it could drain the car's battery eventually.)

The scanner is supposed to have a 30-day memory. I guess this means that
it draws power off one of the capacitors inside. I guess one of them
is bad. (Either that or there is a circuit which tells it "You are not
powered, please stop trying to operate and just save your memory.")

Question: Which capacitor? I'd like to replace a capacitor (assuming it's
a bad part, but this would take care of any loose connections too.) Or
I wouldn't even mind attaching "battery" to somewhere inside in addition
to the "ignition" and "ground" inputs. Or, if I knew where to cut, attach
"ignition" to the stage that draws power and makes light and audio, but leave
the rest of the radio (memory, tuner too) connected to "battery".

Please dont be put off by comments made to make certain people look stupid.
their is a lot to learn about radio, not one person can know everything,
even those who think they know everything
any how.....to answer your question..

what frequency is the antenna used for? at certain frequecies, a coil will
be wrapped to make a coaxial balun
to allow stray currents from flowing the wrong way and to perform a match
similiar like in an antenna tuner.

doing such usually only makes a difference in trasmitters. if you are using
a scanner you probabaly wont notice any difference except maybe around
certain frequencies for which the coil is matched for

i hope i helped, if you have any question please email me

sincerly

3134. Bearcat 800xlt going higher than 912.00

Newsgroup: rec.radio.scanner
Date: 2002-09-28 18:26:39 UTC
From: kc5zau@fastdata.net
Message-ID: <e6936264.0209281026.5e2ea5@posting.google.com>
Source record: 43324

Can my old scanner Bearcat 800XLT be modified to go higher than 912.00
its present stopping point? I would like to reach 928.00. If not what
kind of new equipment do I need to get.
Also what cordless phone frequency, base or handset do you program to
receive.

No, the BC-780D and 250D digital scanners that are coming out in November
will not be able to listen to these systems becuase this is not a APCO-25
complaint system, it is a Motorola digital system. If Memphis ever upgrades
to the new APCO-25 then you will be able to use the digital scanner.

The first thing I'd do is just re-solder the joint.

Well it might be helpful to learn how to solder in case it happens again. I
do know that one of the main failure points for scanners that I've found is
a cracked solder connection from the power plug on the PC board. This is
due to constant flexing from plugging in & unplugging the power cord. It's
a common problem that is easy to fix. I think it's far less bothersome to
open up the scanner and re-solder the joint than it is to pack it up, send
it to Uniden, wait several weeks, and then pay a hefty repair bill.

$80 seems a little steep to just fix a bad solder joint.

It sounds really steep if their policy is to charge $80 whether or not
they fix it.

Your post made it sound like sending the scanner back to Uniden for
repair was not a great idea. Since Haardvark2 can see the bad solder
joint, fixing it him (her?) self is a helpful idea.

Someone else suggested finding a local repair shop, which is also a
good idea for a scanner not under warranty.

New Jersey also has a no-pump-yourself law.

Funny thing is, despite the extra labor, gas prices in New Jersey seem to be lower than in the surrounding states. At least that's the impression I get driving through on major highways. And these days the pump jockeys on the Jersey Turnpike wash your windshield while they pump.

Radio Shack tuner cleaner does a good job of silencing noisy volume controls.
I have used it on many radios older than your PRO-2006 with excellent results.

The 800XLT only goes to 912MHz? Interesting... I've never seen an 800MHz capable scanner stop any lower than 956MHz. That's where all mine stop at...

I highly doubt you can open it up any further that what it's at already. If your scanner truly only goes to 912MHz, then I'd suggest buying any other 800MHz capable scanner and you should have frequencies all the way up to 956 at the very least...

Phone frequencies vary. Generally they fall in the range of 902Mhz to about 928Mhz. More or less grouped near either end of that frequency spread. If it's not a digital 900MHz phone (sorry, can't hear digital phones on a scanner,) search between 902 and 905. Most likely you will find what your are looking for there.

Seems to me that a lot of RS's scanners are made by Uniden and rebadged as their own.

What are the chance of RS having their own version of the 250D?

Check out
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D523
for info on the Pro-93 or
http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D525
for info on the Pro-95, which someone mentioned appears to be exactly
the same as the Pro-93, at the same price. If this is true, I am sure
the Pro-93 will drop BIG TIME in price. If your local Rat Shack hasn't
gotten the Pro-95, I'd wait for them to arrive, then see if the Pro-93
has dropped in price. I just might do that myself! I have a Pro-2053,
the base version of the Pro-93, but a handheld would be nice for the
car.

Greetings all,

My question is has anyone else heard of or had (has) a PRO-33??

When I was in the Navy at NAS Willow Grove many moons ago, one of the guys in my shop moonlighted at Rat Shack, and had access to the defect/toss it out pile. He rescued a PRO-33 scanner and brought it in for me. I repaired the unit (bad BNC connector for the antenna) and have been using it since. I can't find much info on it, I was wondering if this was one of those models that wasn't offed for long time, kind of a bastard model...

Thanks,

Chris N8PHU

Radio Shack scanners are designed by either Uniden, or GRE. Since GRE is not talking about manufacturing a digital capable scanner, it's doubtful that Radio Shack will have anything to compete with the 250D, other than possibly a 250D re-branded with their name, and model number.

Depends on the CB antenna. I had good results with a cheap center load
magnet mount CB antenna on VHF Hi and UHF, while a base loaded antenna
didn't work at all. These were mobile antennas, I've never tried a
base station antenna with a scanner.

Message-ID: <3d974906$0$177$ba620e4c@news.skynet.be>
Source record: 43344

Hi All!

I'm to buy a new antenna for my Yaesu VR-500 vut I don't know which to chose...
I read the antennae's comparison on Strongsignals...and chose one of the test.
But which is the best for wide range scanning?

I'd like to hear CB's, fireman, aircrafs, (and also about 400Mhz, 800Mhz, 900 Mhz frequencies;
just to know what's possible to hear with such frequencies as I don't get nothing with my stock antenna.)

It seems that the Super Stick II is very good, as good as the old ANT-8 from Grove, but the problem is that it is
so big that it can stress the BNC connector on the scanner...Is it going to break the connector if used on a table, whithout
touching it?
Should I buy a new model Grove Ant-8?
What about the Maxton? Lof of people on the group told me it is very good...but I read on strongsignals that is was quite
desappointing after the VHF-lo frequencies... is is true?

What do you think of it??
Thanks a lot for your great help..I'm a newcommer in this fantastic scanner world!!

Bruno

I would recommend going to deja.com and search for Pro-33 and 20-134
(the Rat Shack part number). I did a search and came up with a lot of
postings about the scanner.. you might find information of use there.

At this point, I'd say not very likely. First, Uniden will want to milk the market for several years before releasing their design to be rebadged as Radio Shack. Second, Radio Shack's scanners generally aren't the top of the line models, instead they are the lower-priced units. At $600+ for a digital-capable unit, I expect RS will wait until there is a much larger demand, with a corresponding lower cost per unit, before coming out with one, IMHO. By that time, GRE (who make most of the RS scanners), will probably have come out with a digital unit of their own. Either that, or the digital market will remain a niche (which I see as likely at this time), and Radio Shack will not bother.

If you are even close to town, or any transmitters, the intermod you get
from a better antenna won't be worth it. I sent my VR500 back due to it
getting hammered by intermod from a nearby police dept transmitter that
only barely causes a peep on my other rsdios. This was with the stock
antenna. And no, the VR500 wasn't defective, a friend's did exactly the
same thing. All in all, I end up with the stock antenna on most of my
radios. I have a low tolerance for intermod, and even if a radio has
CTCSS, it's a poor substitute for decent basic receiver performance.
Almost every handheld has one band that's got problems. If it's

something I don't care about, great, but if it's one of the main PS bands, that's a radio I'll dump.

But, it will be up to you if you can tolerate the intermod you'll get with a "good" antenna.

Remember, whenever Radio Shack has a Uniden scanner in their store, it costs a lot more than if you would just buy the one with the Uniden name on it. So... If Radio Shack would sell a version of the 250D, it would cost a lot more than the original 250D. Therefore, who cares if RS does or not, either way you would never want to pay a higher price for it at Radio Shack.

I've been reading this board for the last several months and finally decided to ask the question: " What is so important about listing to cell phone conversations?"

I was glad to finally be able to buy a trunk-tracking scanner and eliminate all the unwanted signals from the Police & Fire traffic.

If some of you are really that fascinated with listening to cell phones, why not apply for a job with any of the various governmental agencies that do this on a daily basis? Then you could satisfy your curiousity and get paid for it!

I think its mostly because its something that is being denied to them.
People like to do forbidden things. Cell phone conversations, like most
telephone conversations, are pretty boring Eventually, as more cell
companies go to digital, it will lose interest to people who like to
evesdrop. The same thing has happened to cordless telephone coversations.

For many people, once they get a cell-phone unblocked scanner, they soon
lose interest in intercepting telephone conversations. They areabout as
intersting as listening to the drive through window at a local McDonalds.
"Would you like to supersize that order, sir."

"America has more nuclear, biological, and chemical weapons that any other
country, and it is the only nation to have used such a weapon against
another."

Just that bit about "the only nation" on cursory examination - but to be
charitable, it reads more like a mistake in editing than intentional
overstatement. Nevertheless, while the world awaits another unilateral
blunder from Bush, wouldn't it make sense to make one's arguments a bit more
unassailable by culling obvious misstatements like the one above?

Jean

>telephone conversations, are pretty boring

I agree :) I listened to cell and cordless phones a few times and it
is ***BORING***! Nothing like listening to some whiny teenager or
angry housewife blab on for hours to put you to sleep. Gawd.

BTW I am in Canada where it is legal to listen to any frequency.

Where tuning into cell phones gets interesting here is when there is a
major police event. When the cops want to talk "privately" to the
dispatch or basically try to make sure the media isn't listening in.
(you know, when "accidents" like officers beating a man within an inch
of his life happens), then the keep radio silence and use cell
phones... unfortunately for them, the department phones are on the old
800mhz analog system. Not very private.

Cell phones were also fun to listen to in the "red light district"...
you'd hear some pretty proeminent people calling pimps and placing
rather interesting orders. :o) But pimps and dope dealers were
amongst the first ones to get smart and drop analogue phones in favor
of digital PCS phones.

But like listening to McDonalds drive thru windows, it does get old
rather quickly.

Allen

Having listened to such things before they were so illegal, I can say that it depends on where and when you listen. If you live near a major Interstate highway or shopping mall, you can hear all sorts of things such as harried soccer moms, middle managers mired in minutia, drug dealers, executives sweet talking their mistresses, giggling schoolgirls, and so on and so forth.

It's a cross section of life in the faster lanes. It gives you a taste of what's going on around you in a way that you can't get from just hanging around. It's also nearly anonymous most of the time. Frankly, I really didn't care to follow most conversations. And yes, it gets old after a while. So does monitoring Air traffic control. So does monitoring the police, or weather fax traffic on SW.

Today, I don't bother. I usually listen to air traffic control, the radio channels we use at work, and police and fire traffic from my area.

It's a hobby. What more answer do you need?

Thanks to Jake and the others for the posts. About all I listen to are
the radio channels at work, and police and fire traffic from my area.

I guess some people just have to live through others in one way or
another. My live is mundane enough without listening to soccer moms
and the others Jake listed

Happy listening to all.

A boycott says we disagree with her statement, our right to freedom of speech as well.

One would have to admit that the rhetoric she espouses is overstated and lacks validity. Sadam, for example has used chemical and biologic weapons against his own people.

In my opinion, she is at best, an uniformed person and at worst an ass.

i just purchased my first scanner (uniden bearcat BC60XLT-1) with the intention of listening to police and emergency calls. i have programmed in several frequencies from the "Betty Bearcat Starter Guide". i have yet to pick up any calls. i have heard a few static filled conversations but that is all.
is it that i do not have good frequency numbers or the fact that i bought a cheap model.
i have always wanted a police scanner since i was a kid. any suggestions?

kevin

Are you sure the frequencies you have are accurate. Your locality may have
gone trunked or digital. The BC 60 can pick up neither.
Check the Web for your local frequencies to make sure they have not changed.
Your local Radio Shack should also have Police Call which is much more
current than Betty is.

I think it is supposed to work on the UHF band, but when I enter a frequency such as the ELT frequency at 243.00 mhz, I get "error", and when you put it in scan mode it skips the 225-400 MHZ freqs. I needed the UHF band in particular as well as the VHF aircraft band to use it for work. Whats' up with this? Send it in for repair? Unfortunately I bought it as a used unit from Ebay, so no warranty. Can someone confirm that it is indeed supposed to cover the UHF band?

From: Dave <ws2l@NOSPAMoptonline.net>
Message-ID: <lwim9.43419$9d3.1841870@news4.srv.hcvlny.cv.net>
Source record: 43390

I have an old Pro-2004 that I modified years ago and listened to cell conversations from time to time. To be honest, they are as boring as listening to cordless phones, with the exception of one apartment I used to live in. Some lady one block behind me was running a call girl service from her home and as stupidity would have it she used a cordless phone. For months I enjoyed listening to this lady on the phone day & night until one day she got busted......End of story.

For most people I think it's the knowledge that the unit they own can monitor these frequencies, after actually listening to them for a while it gets quite boring listening to Mable complain that her dentures hurt to no end. For me, now all I listen to is the local officials to see what's going on in my area.

3201. Battery Pack for BC245xlt?

Newsgroup: rec.radio.scanner

Okay, I've just made the _second_ NI-CD battery pack for my BC245XLT
unable to hold a charge. Has anyone heard of some device that would
safely allow me to use AA cells instead? I'd really like to carry my
portable around with me, but for now I'm restricted to my car and home.

Please, a URL or other reference? Thanks.

Not sure, four AA-cells yield 6v while four NICD "AA" cells yield 4x1.2
or so = 4.8v. I don't know if the circuitry in the battery portion of
the handheld could manage the extra 1.2v

Why, the same thing I do for my [pda diskman pager etc], replace 'em.
Bulk at costco is fairly inexpensive, around $8 for 24...

I just put up the Scantenna for my Bearcat 780 and the reception improvment is amazing. I do have a run of around 100ft. of RG-6 and wanted to know if there is an amplifier available that may enhance my reception even more. If so, where is the best location for the amplifier? Do the in-line types work well? Thanks for any assistance.

Use the search function to locate signals in your area.

Try searching 146.52 to 147.39 MHz in 15 kHz steps. That is the 2-meter ham band and you should certainly hear something there. Also, try searching 162.4 to 162.55 MHz in 25 kHz steps for your local NOAA weather broadcasts.

There are lots of online frequency lists. Try doing a Google search using the words "scanner" "frequencies" and your town or county.

I wouldn't waste the money. Chances are that any amplifier you put on
that line will simply overload your scanner. Spend your money getting
the antenna higher, find some surplus Andrew LDF4-50 or even some
cable TV hardline. Get a beam.

If you're going to put an amplifier in line, get a variety of
frequency ranges. Make them narrowband affairs (with a cavity or at
least a helical filter in front of them) and switch them remotely at
the top of the tower. Otherwise you're just begging to get
overloaded...

The only UHF the Pro-91 receives is the 406-512MHz and 806-956MHz (cell excluded, of course) segments. See http://support.radioshack.com/support_electronics/doc48/48456.htm for details.

I have a Radio Shack Pro-43 HandHeld scanner for sale. It comes with the belt clip, antenna and batteries. The belt clip has some adhesive (glue) on it. Other than that it is in good used condition all the lettering is there, no severe scratches on it. It has had the 800 mhz mod done to it and it works fine. I believe you can download a manual online.

I'm asking 150.00 dollars for it. Shipping included in the ConUS. Payment by pre-paid money order. If you're worried about that you can check my ebay feedback.

Thanks..Don.

3211. tk500 v1.0 software for Yaesu VR-500 available

Newsgroup: rec.radio.scanner
Date: 2002-10-01 20:59:34 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>

Source record: 43201
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk500 version 1.0 is now available for free download.

tk500 is an open source programming utility for the
Yaesu VR-500 portable receiver.

Improvements in version 1.0 include the ability to
sort memory channels by frequency or by label in
any bank or all banks.

tk500 now reads the radio version information directly from the
radio, saves it in the .tk500rc (or t500.ini) file,
and uses it when writing back to the radio, independent
of what the user identifies as the version.

The Serial Communications fields are visible at all times.

tk500 has a graphical user interface and runs on Linux
and Windows. I'm still looking for MacOS X beta testers
familiar with Tcl/Tk.

You can learn about and download a beta test version of tk500
from my home page:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to Paul Martin, N8ULS for providing experimental data and
to Dan Wanchic, WA8VZQ for posting detailed
information about the RDF file layout.

What frequencies are you planning on monitoring?
A discone up as high as you can get it with some low loss cable like
RG-6 triple shield or LMR-400 would probably serve you well. Ten miles
isn't that far if you antenna is up in the clear. Scantenna or one of
it's variants would be good too.

Try this web site Lee Electronics <http://www.leeselect.com/> and buy
one of the BP - 1600 replacement NiMH battery packs for your BC 245 XLT and
your worries will be gone.
Reading the packaging on the side of a Radio Shack NiMH AA cell,
it warns "do not solder directly to these cells" so making a replacement pack is
hard!
I have used a Lee Electronics replacement battery pack in a Radio Shack PRO-90 for
several years it works great.
You may be burning out the battery pack by over charging it,
by running the scanner off of the car power or the wall wart power supply while
listening to it. Before
the battery pack has completely discharged!
I just us the wall wart to charge the NiMH battery pack in the PRO-90, with the
scanner
turned off!
The pack fully discharges in 12 hours then takes 24 hours to recharge, inside the
245. I run the PRO-90 for 8 to 10 hours and
the pack will recharge in 14 hours. Once a month I'll discharge it completely then
recharge for 24 hours.
The battery pack for the BC 245 XLT is interchangeable with the BC 235 XLT, PRO-90
and
the Uniden Sport Cat scanners and possibly the older BC 230 XLT. Radio Shack also
sells
a NiCAD replacement battery pack to fit these radios.
If the battery pack will not hold a charge the charging circuit inside may be
damaged.

When you say you want to pick things up 10 miles away, you've got a lot of variables there. Are you base, mobile or portable? Are the systems you are wanting to hear base only, base & mobile, base/mobile & portable? What frequencies? What is the transmitted power? Basically, it comes down to transmitter power/antenna height, distance between transmitter & receiver, and receiver sensitivity/antenna height, type of terrain in between; along with the frequency's characteristic behavior. Fill in the blanks and I'm sure somebody(ies) can assist you.

My PRO-2022 Scanner has stopped recieving any signals (yes, the antenna is connected). When I first switch it on, it will start scanning but never recieve a signal. If I turn the squelch down while scanning, it will stop and I can hear static.

I have another scanner that works fine, so I know when there is something on a particular frequency.

Can anyone give any technical suggestions where I should start troubling shooting it. Nothing obvious when I opened it. No dry joints, loose wires etc. Any way I can reset the scanner?

Any other suggestions? Thanks in advance.

Hi sir,

Sorry to "bust in", but does the BC60XLT has a search function ? I bought
a Uniden "entry-level" scanner as a gift for my father, and if i recall
correctly, it didn't had a search function. But i don't recall *which* model
it was. I would swear it was an '60XLT but not sure 100%.

Bill,

Are you refering to the Pro-94 ? That is RS's only 1,000 channel handheld which I have & agree it is a good buy for the money. If it has not already gone on sale it will within the next few months, bought mine last year in early December for like $100 off the regular price during a sale.

Not that simple. VHF/UHF signals are line of sight. Get your antenna up as high as possible and use low loss coax. A discone at 100 feet will outperform a beam at 20 feet.

Check the simple stuff first. Carefully open up the scanner and see that
the cable attached to the antenna jack is not broken or shorted. Make sure
your antenna is good.

Dude, do a search on eBay for completed items "pro-34". The last few have sold for around $170. One even sold for $185!! (http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1383731555)

Apparently, Don's price for his '43 is not too expensive. Consumers rate the value of items by their dollar "votes." However, eBay is famous for allowing people to make a grossly inflated profit on anything from Top Ramen noodles (yep, I once saw a case of it for like $20!!) to cheap stickers.

Cheers.

3228. AR8200 MKII backlight adjustments?

Newsgroup: rec.radio.scanner
Date: 2002-10-02 16:52:21 UTC
From: NightRunner <jackfrostnippin@yernose.com>
Message-ID: <6m6mpukdjv47tkae9pr3oep5omsm3tp9j1@4ax.com>
Source record: 43218

Hi all,

I am counting down the months till my AR8200's warranty expires so I can do a couple of mods to it... I plan on killing the "always on w/power adapter" feature and also attempting to reduce the LED brightness a hair. Damn man, you can use that thing as a flashlight! There's no stealth whatsoever about that backlight!

See this:

http://www.applet.cz/~ulcak/disabling_illumination.htm

What I was thinking, is that the diagram for the backlight mod appears to insinuate that all the LEDs for illumination basically feed off of one power trace or wire. If that is so, then there *should* at least be a way to insert a low value 1/4w or 1/2w resistor in series so as to lower the amount of light to a more apt level. My eyes are pretty good, and I'm fairly sure I could lower the amount of light to a faint glow to where it is just visible in the dark *before* my eyes are dark adapted. This way, I can see it if I occasionally catch direct glare from a bright light (oncoming car headlights let's say), but the glow of the backlight won't be visible to any fool within several hundred feet of it.

So... question!

Can anyone confirm or deny the idea that all LEDs in this radio can be reduced in brightness with one easy resistor addition? Also, anyone have a ballpark idea what value of resistor I should try first? I really don't want to disassemble and reassemble this rig any more than I have to since the ribbon cables are reportedly VERY delicate. If I can get the job done in two passes I will be very pleased :-)

Source record: 43220

I'm using Wacars regularly and like it fine... I do however find that it's really picky with my AR8200. I thought this would be a fatal sort of issue until I built my first really workable All-At-Once TRF VHF-Air protoype receiver. It works pretty well badass for ACARS reception and WACARS decoding, but I've had serious problems trying to build it onto printed circuit board from breadboard. Seems to want to squeal like mad when I tune the stages too closely together. Just the same, I have been working tirelessly on fixing the problems and have had some headway in the last few days. When I get it working fluidly like the breadboarded prototype, I will likely post an image of my board layout and parts list if there is an interest. The basic idea of this thing is a passband amplifier fed into a simple 1N34A detector and high gain op-amp/LM386 audio out section. Some people would no doubt crab about hundreds of channels of aircraft all a steppin on each other at once, but personally I love it. It's like a sea of scattered voices, and best of all you don't have to wait on your scanner to come back around to 122.700 when it loses lock. And no, it doesn't create audio freq heterodyne someone on another group said it would, since VHF-Air is usually 25MHz spacing and 8.33MHz at tightest. The audio is very clean and crisp, crisp enough to produce ACARS hits 120 miles out with a TV booster on a good antenna. Don't believe me, I can supply both WACARS screens and audio samples!

I'm babbling and sound like a TV commercial. Sorry, got a bit excited :-)

'scuse me? searching for (pro34,pro-34,"pro 34") +scanner yields 17
completed auctions between 9/17 and 9/30, the highest price was $135.00.
The majority of them were in the $95 range.

in case you are part of aixelsyd maet and transposed the 43, a similar
search for 43s yields five auctions where the unit actually got bids,
completing in the $102-165 range.

Don seems close to correct, perhaps on the high side.

No top ramen currently being auctioned :)

That's my guess, too. I really wish there was a circuit built in that
would stop charging when it's topped off, so we could leave it on the
charger.

Don's price of $150.00 is fair assuming the unit is in very good to excellent condition. Open 800 coverage is not a major factor any longer in these units, thus the continued drop in price recently of these units..

However, despite the 800 band nonsense, these scanners are still the best receivers of this type made in a hand held, IMHO.

BTW...Don, when offering to have your eBay feedback checked, include your eBay user name in the post.

I made a couple of battery packs for mine. The first was a set of 920mah nicads. The second set was a set of 1100mah NiMH. There are several companies that sell Solder Tab batteries. The NiMH batteries have almost been a case of forgetting it has batteries in it. They run the radio for a couple of days. the following link had a pack of 1600mah NiMH packs http://www.primecell.com

featheredfrog@ancientpond.com wrote:

I did some charge current checking, while I was making a NiMH battery pack.
The charging cradle, for my BC235, put out only 50ma. That should take a lot
of charging to burn up a battery pack.

Okay, peeps, let's try again. As a clarification, the "design criteria"
for the AA battery pack is:

* maintain portability - no other boxes hanging off the unit
when I'm hand-carrying it
* maintain/improve ability to run on external supply (diode in
the battery pack?) with batteries still inside
* easy AVAILABILITY of replacement cells when they go pfft.
Alkaline cells are still easier to come by than NICDs, and
don't require an initial charge-up

I'm beginning to think that a 3-cell AA pack (4.5V) might be within safe
limits for any circuitry using NICDs - anyone know if voltage in a NICD
pack decreases with discharge, or is it suddenly just OFF?

I don't think I will EVER purchase another unit that doesn't use
"normal" cells. :(

3258. tk2 v0.4 open source software for ICOM IC-R2 available

Newsgroup: rec.radio.scanner
Date: 2002-10-03 15:16:56 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d9c5f89$0$1434$272ea4a1@news.execpc.com>
Source record: 43247
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk2 v0.4 open source software for the ICOM IC-R2 receiver
(USA version) is now available.

I wrote tk2 using the Tcl/Tk language for use on Linux, MacOS X,
and Windows. Changes in version 0.4 include:

(1) tk2 can now sort memory channels by frequency within one bank
or all banks.

(2) Fixed a bug which caused a hangup in WindowsXP at the
end of a data transfer from the computer to radio. Added logic
to read back the data message echos when writing data messages
to the radio.

You can learn about and download a beta test version of tk2
from my web site:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to BlakkeKatte@yahoo.co.uk for publishing detailed
information about the IC-R2 protocol and memory layout
at http://uk.geocities.com/blakkekatte. Thanks also to Les Butler,
Thor Heglund, and other IC-R2 owners for helping to test tk2.

OK, I'll play:

Battery holders, 4xD-cell, Taiwan, surplus, 2 for a dollar

mini plug, surplus, Taiwan, 5 for a dollar, $0.20 each

crap speaker wire, free

tape, free

solder, free

total cost, $1.20

Sounds like you break even.

Of course at $5.50 delivered, I figure I could have 4-1/2 of these things laying around.

Of course, in quantity, you can get the parts even cheaper. That is called free enterprise.

And you are fee to build and sell anything you want at any price. That is called free commerce.

And, you are free to advertise here. That's called free speech.

And, as recipients of your advertising, we are free to comment. That, too, is called free speech.

Perhaps you would like to place a gag order on those to whom you send your advertising? What would that be called?

"Priceless"?

Carry on . . . .

PRO-93 IS a great little system. Here is some information that I
posted a week or two ago.

There is a PRO93 programming software that is available for FREE.
It enables you to set up the freqs and talk groups the way you want on
your computer and then load it to your scanner.

http://www.starrsoft.com/freeware/Win93/

The cable is not free, however. There is a couple in Oregon that
sells them for $22. I got mine two weeks ago. Works wonderfully.

http://www.pfranc.com/pclink/ScannerDeal.shtml

I wish I would have had the software and cable a long time ago.
Programming all that data from the keypad is tedious.

PS - 10/3/02 - that software and cable enabled me to program the
PRO-93 for an out -of town trip in under an hour of computer time.
Resetting it to my local configuration took less than a minute!

But only if you use good coax.

I have the whole series of AOR option cards for the AR8200 and AR8600 scanners for auction. This includes the VI8200 voice inverter, RU8200 playback record card, CT8200 CTCSS decoder, TE8200 tone eliminator, and the EM8200 memory extender card.

Please take a look!

3275. AM Station by my house, anything I can do?

Newsgroup: rec.radio.scanner
Date: 2002-10-03 23:31:59 UTC
From: RaZ0r! <nospam@nospam.com>
Message-ID: <Pr4n9.35066$CN2.22569@nwrddc01.gnilink.net>
Source record: 43265

This might be slightly off topic but I know if anyone knows what to do it would some of you all.

I have an AM radio station VERY close to my house. Less then a quarter mile.

I hear the station in my computer speakers, my telephone headset, etc. Also on my television, anything connected via RCA or S-Video jacks gets bad interference like diagonial lines. I have cable TV, and it seems to resist the signal better.

I was wonder if there was anything I could do to combat this?

I just a casual scanner user, so I'm not real expericenced in radio. If you do have any suggestions, please go easy on me with the high tech radio stuff hehe.

You might try contacting the FCC, as there are laws regarding acceptable
levels of interference, and it sounds like they may be out of bounds.

I doubt that tk2 software will work properly with an IC-R3.
It would probably be possible to reuse large parts of the software
in designing a program specifically for the IC-R3.

I don't own an IC-R3 so I've not been able to experiment with
its cloning port.

For the IC-R2, you will need a suitable TTL-to-RS232 level adaptor
to connect the radio to your computer serial port.
A direct cable connection won't work and could damage the
radio and/or computer serial port hardware. I use an
RT Systems CT29A cable, sold for the VR-500. RT Systems sales
staff may be contacted at telephone 678-354-3500 or sales@cloningsoftware.com.

I am not affiliated with RT Systems.

3278. tk8500 v0.7 open source software for ICOM IC-R8500 available

Newsgroup: rec.radio.scanner
Date: 2002-10-03 23:38:57 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3d9cd531$0$1432$272ea4a1@news.execpc.com>
Source record: 43267
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk8500 Version 0.7 is now available at:

http://parnass.com

tk8500 is open source software designed to control
and program the ICOM IC-R8500 receiver. Programmed using Tcl/Tk,
it runs on Linux, Windows, BSD, UNIX, and perhaps MacOS X.

New features in experimental version 0.7 include:

(1) Memory channels can be sorted by frequency or by label,
in any bank or in all banks.

(2) Memory channel information may written to the radio and
saved after sorting in a csv (comma-separated values) file.

(3) The bank names added in the memory channel window.

I don't warrant the software, though it won't cost you anything.

Before getting a government agency involved, first contact the radio station and in a calm, non confrontational, tone explain your problem and ask for help.

If the help is not forthcoming contact your local amateur radio club and ask for help from the interference committee.They are experienced in solving these kind of problems and are usually more than happy to help. Just remember these guys are donating their time so you will have to work with their schedule.

Then if you are unable to get the problem solved contact the FCC with the information attached as to what you have done to resolve the situation. Contacting the FCC with an "I have interference" letter will simply result in a list of things for you to do first.

The computer speakers and phone are easy to cure with a couple of capacitors and a choke around the wall wart power wire. The TV could be a bit more of a problem. I think you will find that the radio station is operating in accordance with regulations and the fault lies in your equipment. Most manufactures do not put anymore filtering than is required to satisfy the majority of users. The usual suspect with TV is the VCR which contains switching diodes that act as radio receivers and introduce the signal to the TV system. I would try disconnecting the VCR or DVD players etc. and add them back one at a time to determine the source.

The radio station can normally guide you to what is required by your equipment manufacturers to cure the problem. I know it seems the electronic world should play well together, alas! such is not the case, and it really tics us off when we have to become the playground monitor. Such is life! Good luck and let us know what you find.

Try contacting the Station first and let them know of the problem. Ask them to have the Station Engineer call you or stop by. He/She should be able to see if the problem is originating from their station or help you at the very least. BUT, I have a feeling it may be in their system. They are bound by law to correct any technical problems. Do not threaten them on initial contact. Just keep tabs on who you spoke with and any claims, promises made to help, etc. IF nothing is done or offered in the way of help, then call the FCC. Actually, writing to them and giving details including contacts made with the station, to whom spoken, position, date, time - would support your case. Do not forget to list the Stations call sign and physical address - be it the studio or transmitter, which ever is known. One other thing, you may want to find out if anyone else in the area may be experiencing the same thing, if so, what steps have been taken.

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

BuTel has a programming kit for Icom R3, software & cable for $ 55.00 only ,
quality of that cable is better then the RT version. They have a simular kit
for Icom R2 ($ 45.00).
ARC2 software is still the best for programming this little beast..

Please elaborate on that. What kind of technical problem at the station's end would result in them being heard over someone's telephone, computer speakers, or cable TV?

If we accept what the original poster said, this is a commercial AM station 1/4 mile away. What we are dealing with here are VERY strong rf fields that most modern consumer electronics devices are not designed to handle.

Yes, you may speak with the engineer. I you can find him. Most of todays radio stations AM and FM are part of big corporations. They will probably send you a photocopy of a sheet on curing interference and maybe a pack of toroids. There is most likely nothing wrong with the stations transmitter. You are suffering signal overload.

Try this hop down to radio shack and pick up some toroid magnets RS P/N 273-105 they are square two piece held together by a plastic sleeve. take the speaker wires, AC cord and wrap them AROUND one half of the toroid. As many turns as possible. You can spread them out when you put it together. Make sure you place the toroid as close to the speaker as possible. This will act as a choke and it MAY stop most of the unwanted AM signals. It wil NOT affect the operation of the equipment it is attached to.

Also try a web search for RFI, RFI solutions, RFI cure, BCI, BCI solutions.. The FCC has a handbook on interference. It is avaliable from the Gov't Printing Office about $7.00. Try the FCC site or if there is one near you call the local FCC office and ask for the name and catalog number.

Just an aside computers, TV's are consumer devices certified under part 15. the full statement is probbaly on the back of your scanner etc. but in a nutshell "this device must not cause harmful interference and must accept interference even that, that might cause unwanted operation" Howvere most radio station CE's will atl least attempt to help you.

3296. PA-SitRep e-mail list for PA

Emergency Situation Report e-mail list for Pennsylvanians

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
and manhunts.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.

Because messages posted to the list are limitted to
situation reports of MAJOR emergency situations
within the State of PA, message volume on
PA-SitRep is EXTREMELY low.

PA-SitRep is also building a list of PA-SitRep
Contacts, most of whom (25 so far) are Amateur Radio
Operators (http://www.pa-sitrep.com/contact.htm).

PA-SitRep Contacts monitor our higher volume
SitRep/Discussion mail list and post situation
reports ot the discussion list and to the main list.
PA-SitRep Contacts also submit their contact info
for our site and may be contacted for a first
hand situation report should an emergency
situation arise in their area.

Please visit the site to learn more:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. We'll look forward to your participation.

Must be nice to have the resources to get ANY antenna up 100 feet! :)

My VHF/UHF discone is at 15 feet, although I plan on raising it up 5
more feet.

I am not the original poster of that statement, however, sometimes things do go astray at commercial stations. A ham friend of mine and myself had installed a 6 meter repeater on a mountain nearby. A local FM station would occasionally get into it. Both of us have service monitors with spectrum analyzers and we could see a sub-harmonic slowly scanning across the 6 meter spectrum. When it scanned across our input frequency, we could hear it bring up the repeater. We contacted the station owner and explained it to him. It was quickly repaired and he was quite appreciative of the way we handled it, by bringing it to his attention first instead of going straight to the FCC.

>

Depends on the station. Some AM stations run only 1000 watts during the day and 100 to 250 at night. That is NOT a very strong RF field at 1/4 mile. Now if he lives 1/4 mile from a 50,000 watt station, that could be a pretty strong RF field. He probably doesn't have to pay to light his flourescent lights....but then again, he can't turn them off either. :)

If the original poster could provide the call letters of the station, it would be easy to see what their daytime and nightime power is authorized and also their pattern.

Also, if the original poster could elaborate on where they are located relative to the transmitter (NSEW), it might help determine if they are in the main lobe of a directional array.

That's different. That is one radio system interfering with another radio system. But landline telephones and computer speakers should not be responding to rf signals.

Free space path loss down at 1 MHz is 40 dB less than at 100 MHz. A kilowatt 1/4 mile away is likely to be trouble!

Also remember that the peak envelope power for an AM station is four times the carrier level.

I agree. I only made that example to point out that sometimes things do go astray in the commercial field. Perhaps a harmonic suppression circuit has failed, maybe they have lost part of their ground which may affect their pattern. There are numerous things that can be going on that we don't know about. Also, we don't know how long this person has lived near this station. Did they just move there? Did this problem just recently pop up with no changes in the household wiring?? (that would indicate to me something at the radio station). Are any of the neighbors suddenly experiencing a problem? (that would reenforce my theory of a problem at the station).

The station could be perfectly legal. Perhaps there have been some changes or repairs made in the household phone wiring. Maybe a wire junction is rectifying and detecting the signal. Maybe wiring was added

that brings it to a resonant length to the stations frequency.
There are a LOT of variables here and I was just posing a few theories
and avenues to follow.

I am not ruling out the low power station but it is not my first choice
of things to investigate while tracking this down. It may ultimately be
RF overload, in which case there little you can do other than install
RFI traps on the phone wiring, and install some torroids on the computer
speakers.

I know of a 5000 Watt station that does not create havoc to those in a 1/4 mile from it, so you can "not" say that is normal. A lot of things can go wrong in a Station to create problems. A bad ground for example....among others. A bad ground can do a lot of things. My repeater system was functioning fine too, with one exception.... One day it started broadcasting Radio Egypt when keyed up. IT TOO was due to a bad ground. Readings are usually taken to ensure operation at a station, but they don't always point out ALL problems. Broadcast stations are subject to defects just like the rest of us.

And as the other gentleman much as agreed with that I've said, the station would probably appreciate being told first than to go to the FCC. They may not be aware of it. You have to give them a chance to clear a problem up they may not know exists. Now, if they don't, or blow the guy off, THEN call the FCC for their assistance. If the stations owners/operators appreciate their surroundings, public image, etc, they will do what is right.

His posting of the call sign to us would be of no value. You can look at the license info all day long on the computer, it won't solve the problem. That can only be done by seeing what is going on and taking action and at that, by those involved....we at a distance - even if properly licensed and equipped - surely can't help.

The 780 does not have an EL light panel like the Pro200x series.
It uses LED's with alomst imfinite life. So, no problem there.

Ubbe.

It shouldn't. The PRO-2006 used some type of glowing panel, behind the LCD display. The BC780-XLT is side lite, by standard LED's. In fact, some users have replaced there's with different colors.

Actually it did tell me a little. It is a 50,000 watt station running 1
stick during daylight hours and two sticks at night. During the day,
the theoretical pattern is omnidirectional. Examining the antenna
patterns from day and night yield little apparent difference. It might
tell something if the problem is apparent at night but not during the
day, or vice-versa. The original poster is < 1320 ft from a 50KW
transmitter. I am guessing its going to be simple RF overload.

Contact the station engineer first and give them your phone
number and get a follow up on what they intend to do.
If they do nothing or blow you off then its time to play
hardball.
Find out how many neighbors are having the problem and
get them all to mail the station complaint letters. Then it is
time for the FCC who will do nothing.
I know of an AM station that completely redone their counterpoise
ground system and it helped a lot.
If nothing can be done then it is filter time.
Coil up speaker cables into a circle (choke) close to the speaker.
Try to identify whether the interfer. is coming in on the AC mains.

I'm not familiar with that antenna and Google didn't turn up
anything, so I can't guess how well they would work.

You can buy adapters at Radio Shack for the PL-259 connector used with
CBs to BNC or Motorola connectors used with scanners.

No, It can't be modified. No on 800 MHz. It will not do it unless you buy
an external converter.

It will work but don't expect any good results! The adapter you need from
the shack is number 278-208 or 278-120. Study them and get the correct
one. You can't go wrong when you look at them!

The only possible "problem" is that longer feedlines have more signal losses. If you're using lossy cable (like RG-58), you should probably try to keep it as short as possible. But a few extra feet aren't going to make much difference. Rolling the excess into a coil has no effect on signal loss.

Hey Sam,
I just bought a Pro-93 a few weeks ago too! So far, I'm loving it!! My fiancee just rolled her eyes at first when I would play with the radio, but now she's actually starting to get a little interested too. Once site that I found that was very helpful was www.trunkedradio.net. It's got a nice database of trunked systems from all over the place. Hopefully you'll find your area in there too. Have fun!

I doubt very many. Even the BC780-XLT isn't in most of teh chains, due to it's price. It's priced out of range for the average casual listener, who just wants to listen to the local police, and fire. They'll opt for the ones under $200.00.

Places like Grove, Universal, Scanners Unlimited, Scanner World, will all have them.

A lot of land-line telephone conversations are broadcasted via RF, on long distance calls. But it would not be in the 2~4MHz spectrum, more likely microwave, above the frequency of the average home monitoring equipment.

Top of the day mates,

My 400 channel Realistic here in the Pacific Northwest used to really be busy four or five years ago in picking up cordless phone traffic before it was made illegal.

Now I hear little to no cellular traffic on those frequencies. I'm thinking of throwing away the Pro-2000.

All I get now are some cordless stuff, and it appears that those frequencies have changed over the last five years as well. what gives? I miss the astounding knowledge about human nature and what people actually believe that I used to hear when it was picking up the good stuff. Now it has disappeared.

And so it goes!

You state "the old 800mhz analog system". what system and frequencies
are being used now? Perhaps that is why I no longer hear anything much
on the 800mhz freqs...?

Hey I own a Pro-2006. I said 2000 earlier, but I looked closely and it
is the 400 channel 2006. I don't use it much anymore except that it
seems to pick up the new 900MHZ cordless freqs much better than does my
Uniden BC890XLT.

Should I hold onto the Realistic? Why would any scanner be worth that
much in 25 years? I'm just curious as I don't know much about which
antiques will be valuable down the road.

I do have a brand new 30 year old Zippo lighter, still in the box and
has never been used? Where can I sell that? and for how much? :-)

And so it goes!

Most cell phones are digital now, so you're not going to hear them.
Years ago, you could hear lots of analog stuff... A lot of people have
switched to the cordless phones in the gigahertz area because of their
range in the house, and less crowding. Try listening to public safety
stuff. It's pretty interesting too. :)

Yes and no

Many people use cordless phone that transceiver around 31mhz, 45-49mhz or
900mhz. The analogue versions you can pick up, typically between 200m to
2km
depending on what aerial you have,etc.

There is a way to wrap a cable around a "land-line" and intercept calls - it
was developed by the British army during WWI to listen to what Fritzy was
saying!
What technology is involved I will not tell you, and it is something, if
caught doing, will be in very, very deep trouble!

Now if you use even more sophisticated and I mean sophisticated, (it will
cost u 5000 bucks and over) you can even "tune in" to computer networks, ah
! but that is a different story althoughter...

4xD cell holder $1.90
Mini plug $1.55
Crap wire $ .50 (Price for .30cm of heavy duty speaker wire, Good
quality.)
Electrical tape $ .09 (Per meter, good stuff)

Divide all prices by half for US $.

Maybe you need to find new parts suppliers ?

"Proving the Price Police wrong: Priceless"

Proving that you pay far to much for parts: Priceless.

Do you have a problem with me pointing out that you could build one that is
better for cheaper ?
Why ? What's wrong with me pointing this out ?
What limit should I set for this kind of thing ? So that in future if I see
something that is offered for auction I can look back at your advice and
know what to do.
Maybe $20US ?

If you can explain it to me maybe I will not make the same mistake again.

I do have a life and it doesn't involve busting balls.

I was not taking pot shots but pointing out that you could build a better
one for cheaper, I am sure that anyone who cannot build one would be happy
to buy from his auction.
What is wrong with me pointing out that you could build a better one for
less than the one for auction ?

I do have some brand new Icom radio (Boxes) coming up for auction.

No, You see I was hoping to buy this item but didn't want anyone else to bid.
I am trying to buy stuff like this and slowly but surely sell it on and make millions.

I am sure there are quite a few people out there who do not have a soldering iron and maybe interested in buying this from you. It is a good idea. Should I ask if you soldered the connections ? (Joke) Is it a 3.5mm jack and centre positive ? You could also add some of the devices it might fit.

Sly, your story is nearly identical to mine! Wife thought "great, first shortwave and now a scanner!", but she's been having as much fun with the Pro-93 as me. :-) Got my first high-speed chase the other night, which was very cool. Even listening to the driver's license call-ins is interesting. It's amazing what you learn about your community through scanning.

MT Bob: excellent suggestion. I'm definitely buying the cable and downloading the software. Now that I've learned a little more about the scanner I'm realizing that I need to reprogram my banks and talk-groups - ain't no way that's being done by hand again.

I'll join the group this week as well.

One more question: to select specific talkgroups to listen to (or not listen to)on my city's local TRS (Mot), do I need to put the bank in closed mode and then somehow select (or deselect) a bank of talk IDs? My only complaint with the scanner so far is the lack of detail in the user's guide.

Thanks to all for replying!

They will have "search" functions just like most scanners have now, though that's not a particularly efficient or effective way to find the frequencies. The only really NEW thing with these scanners is they'll "decode" digital-mode radio transmissions, which currently come across as just noise. And that will only be for APCO-25 digital, non-encrypted (scrambled) stuff. What city/county are you in?

On the older C band satellite dish systems that were popular in the eightys with the 10 to 12 foot dishes in the backyard, one could hookup a shortwave receiver to the baseband output of the satellite receiver and monitor telephone calls on various satellite transponders that had multiplex telephone service. The shortwave receiver would pickup these telephone calls between 0 mhz and 8.5 mhz. in upper or lower sideband. These type of calls were
mainly long distance. With the frequency range you mentioned this is the only thing I can suggest, he might have been referring to.

Let m,e get this straight, , , , , , ,
You want the freqs so you can listen in??
From where??

Just kidding, , , , ,
Actually, you can tell a lot from the length of the antenna.
On HT's the shorter ones are probably in the VHF HI range, and maybe
UHF (400 mHz and up) The bad guys use anything they can easily get,
including Ham 2 meter HTs. I've seen CNN video of one guy using a
Kenwood 2 meter Ht.

3361. Legal Hallucinogen Sold On Internet

Newsgroup: rec.radio.scanner
Date: 2002-10-06 19:56:34 UTC
From: Salvia@BOXFROG.COM
Message-ID: <71a13612.0210061156.3c567e0c@posting.google.com>
Source record: 43101

Salvia Divinorum has been compared to LSD by a recent ABC news article
http://abcnews.go.com/sections/us/DailyNews/divinorum020401.html

The http://www.iamshaman.com web site devoted to just Salvia Divinorum
and also has a online forum which has over 300 members who enjoy
discussing this exciting entheogen. If you are interested in
buying some Salvia for yourself (as a smudge only) please come on over
and check out the IamShaman Salvia Divinorum store at
http://www.iamshaman.com/store.htm

Nothing sold at iamshaman is for human consumption so please don't
email them or call with questions regarding dosage levels. Even though
their products are not sold for human consumption (WINK) if someone
was foolish enough to either smoke his enhanced Salvia Divinorum products
or use his high Tincture you would not have anything to worry about
because they use the highest standards and infuse only 99% pure Salvinorin A
(the concentrated hallucinogen) from Salvia Divinorum into their enhanced
leaf and use pure Salvinorin for their tincture products too.

Products from iamshaman.com are free of any kind of contaminate.
What you will get is just Salvia Divinorum enhanced product - nothing
more or less but the very best. I think you will find the prices in the
salvia store to be better than anywhere else. They extract their leaf
with great love and care and put this into everything they sell.
Individuals who wish to remain anonymous and live in the Chicago area
can purchase their products with cash by appointment only, as they
do not have a walk in store and are primarily an internet business.

If you are just interested in joining the iamshaman forum to learn more
about Salvia before you buy, you can apply via a link on the main web
page at http://www.iamshaman.com - In order to join this group you must
agree that you are not a part of any kind of law enforcement organization.

Salvia Divinorum -is legal- but only if it is not sold for human
consumption. If you buy Salvia from IamShaman.com do not ask dosage
questions or indicate that you intend on using it as a drug.

This post was NOT made by iamshaman or anyone associated with that
business, group, or web site.

Predicting gloom, and doom, and being very pessimistic. It seems whenever technology is used to capture a criminal, or aid him prosecuting them, some lawyer wants to make it illegal to do so, because we violated the criminal's rights. Criminal rights, doesn't even sound right, does it...but they have more than the innocent victims do, or at least it sure seems like it.

Knowing our legal system, these child beaters will probably sue for invasion of their privacy...and WIN!!!

Michele,

I just ordered one from Grove http://www.grove-ent.com/ They estimate late 2002 shipping and will only charge your credit card upon shipment. Don't forget, when you order, you need the digital decoder card as well as the scanner itself.
Total price with shipping was $696.85.

Regards,
Mark

I was wondering if now is a good time to buy a scanner? I have a bc-890xlt and pro-29 from several years ago that I rarely listen in on but I'm looking to get back into the hobby. I wanted one pc programmable cause I'm to lazy to program everything in. Would you suggest a handheld or base unit? I like handhelds cause they seem to have all the features of a desktop unit but if I go that route I want something sturdy. or maybe I should just stay with what I have? if i get something I dont want to pay more than 300 dollars. also a suggested website to order from would be helpful.

thanks!
Chris

>call-ins is interesting. It's amazing what you learn about your
>community through scanning.

My father is a police officer, and I'm looking into becoming one in the next year or so when I'm done with college. I've had a lot of exposure to police work, and done a number of ride-alongs, and for me, that only makes scanning that much more exciting! Unfortunately, here in Columbus, the police department isn't allowed to chase anymore, so none of those to listen to. I guess the brass decided it was too much of a liability... since the last time a suburb had one, it ended in a death. It certainly is a consuming hobby if you let it become one. :O)

>
> One more question: to select specific talkgroups to listen to (or not

> closed mode and then somehow select (or deselect) a bank of talk IDs?
> My only complaint with the scanner so far is the lack of detail in the
> user's guide.

Yeah Sam, if you scan the system in closed mode, it only lets you hear talkgroups which you have programmed into your ID banks (These are your 5 banks of 20 ID's that you get per frequency bank). While you're scanning the TRS, press program then trunk to get into your ID banks. To turn a whole bank off, select the bank by pressing trunk until you get to the one you want and then press function 1 (this toggles all 20 ID's in that bank on/off). To lock out a specific talkgroup in a bank, but not the whole bank, use the arrow keys until you find the specific talk group you want, and press the lockout key. Just remember what you've locked out manually (I've found it easy to forget, and then wonder why I'm not hearing anything on the fire dept. dispatch channel). Hope that helps!

-Matt

Chris - Check out the Radio Shack Pro-93. Go to their website and compare the 93 and the 95. The same scanners except the 95 has more channels. The 95 is new and just coming out. That should cause the 93's price to drop. Some places have it for $170. The desktop version is the Pro-2053. No longer on the website but, I understand there are plenty in the warehouses so the stores should have them or get them.

It does not matter if you activate the channel delay. If the bank is set to trunk, the delay is disabled. If it were able to be on while trunking, you would definately want to keep it off.

For trunking use the talkgroup ID delay. It is defaulted to on for 1.5 seconds. This can be changed by pressing PROGRAM then TRUNK. While in this mode press FUNCTION then DELAY. It can also be adjusted using the programing softeware.

Well just as I figured no one gave the reason for enjoying listening to
private conversations that interests me most.I'm certainly glad that I
got the knowledge that I did from my scanner because now people are

wising up and blocking us from listening to any private person to person calls.

I first became aware of the possibility one day back in 1979 when I was in my front yard in Duluth, Minnesota talking to a friend. All of a sudden, two more people began talking in my phone loud and clear as if they were part of our conversation. I was amazed. I kept saying hello! Hello and they just kept laughing and talking. They never acknowledged me at all. Me being an electronics fan, and a computer person thought there was something very odd going on here. Something that could UNLOCK THE KEYS to some mysteries that had been bugging me for years.

So I messed around for a couple of hours and when I couldn't figure out how that happened, I got on the phone and called my local Radio shack and
asked them about it.

To my amazement, they explained that cordless phones operate on radio waves just like radios. They said that sometimes when two people lived close to each other and their cordless phones happened to be on the same frequencies the people could hear each other, but not talk to each other. Then he told me that he had a device that would pick up all of the frequencies that cordless phones used back then.

I was off in a flash! :-) I went to the store and looked over the things called "scanners" I as flabbergasted! Within a few minutes, I purchased my first scanner which was a Bear Cat 250.

He gave me a book with all f the cordless freqs in it as well as all of the police, fire, and other interesting stuff coming from the air base in Duluth as well as the city. So I went home and spent the next hour or so gleefully programming my scanner.

When I finished and turned it on, I was stupefied at all the action going on around me that I didn't know existed. all ten cordless phone channels were hopping. The police, fire, aircraft, emergency and other stuff was great also.

However I quickly became most fascinated to listening to my neighbors having private conversations with each other.

By this time I had already been in the Air force for 13 years. I had spent eight wonderful years at Aviano AB, Italy, where the Italians treated me like I was a God. One great year in Thailand were I lived like
a king. then I had about four years in the United Snakes of Amerikkka where I was treated like an outcast even though I was born and raised here, received a university degree and fought for my country. I was still nothing but a "NI..ER" to nearly all of the white people I encountered.

Yet it seemed that nearly every time the subject of race arose in a mixed, or mostly white group of people, all the white people there swore

up and down that they were not prejudiced, and harbored no ill will towards Negroes. It was just the "NI..ERS" that they hated. After had heard that for years, I wondered if you all were really telling the truth, or were you just deceiving yourselves in trying to blow smoke up the arse of every black person you encountered. :-)

Well, now I knew I had in my hands a tool that would reveal once and for all what WHITE PEOPLE REALLY FEEL, BELIEVE, AND SAY ABOUT BLACK PEOPLE. I want to say that I quickly began to listen to my scanner a couple of hours a day or more. It didn't take long before Jesse Jackson was in the news doing something positive and trying to right the injustice in Amerikkka as usual. I was absolutely frightened by the incredible amount of racial hostility that I heard coming from the same neighbors who smiled and even seemed to be friendly when I came around. It came from old white men and women. It came from young white men and women. It came from white children. That Nigger this! That Nigger that! I hate Niggers! Let's kill the niggers! Let's send them back to Africa where they belong. I heard even worse poison when Minister Farrakhan was in the news . One of the greatest humans of the 20th century. The only human of any color who was able to assemble over 1,000,000 adults peacefully in one place for several days. A man who has a beautiful message of peace, love and respect for all decent human beings was reduced to some of the vilest names one can imagine. The same went for Martin Luther King when his holiday came around. My God! the names I heard white people call a wonderful man whom the world loved enough to give him a Nobel peace prize. He was called Martin Luther Kinky! Martin Luther Coon! but mostly he was just a trouble making Ni..er to the white folks I overheard on my scanner who I'm sure were pretty representative of white folks all across America and Canada.

I think the scariest period was right after the OJ Simpson trial. I thought my scanner would blow up from the hatred that went across the airwaves from people who felt they knew more about the case and the evidence than the twelve people sitting on the jury, some of whom were white people.

Well, I give you all a 100 pages of negative stories, but I won't. I will say that after 23 years of listening to first cordless now cellular where I get to hear what the rich and powerful have to say about black folks and believe you me they are just as racist and far more dangerous because of the money and power they have to do things to blacks that make our lives miserable, and they utilize that power everyday in every way they can.

I have lived in, or travelled through 47 of our United Snakes of Amerikkka. I have had at least one scanner with me everywhere I went after 1979. It doesn't matter whether I am in Maine, or Florida, or Minnesota, or Seattle, or Tucson. The white people are voicing the same hatreds for black people.

Now I realize that I haven't listened to ALL WHITE PEOPLE. I HAVE listened to over a hundred thousand of them over the years I'm certain

from all walks of life.

I can honestly say that in monitoring more than one hundred thousand private
conversation across America, over the past 23 years when white people began discussing black people and they feel they are safe to say what they really believe, I have heard less than --3 dozen conversations-- out of hundreds of thousands, where two white people had anything to say that was accurate, positive, and indicated that they were really genuinely fond of African Americans who are their ancestors, and who helped build this country into the most powerful nation in the world by working for free for over 400 years. Now keep in mind I am not counting the white men and women who are dating and married to black people. Obviously they tend to be somewhat more enlightened. However even many of them despite the fact that they love black men and women they know very little factual information about black people and the great Ancient African culture from which ALL human beings originate.

This has been a depressing state of affairs for me because like most black people we really wanted to believe that white people really did like being around us and valued us as much as we do them.

Sometimes the truth hurts and this is one of those times. I know beyond any shadow of a doubt that 8 out of 10 white people hate the fact that we even breathe the same air as we do. As you all said earlier, I'm finally becoming bored with listening to conversations because I have not seen any improvement in white peoples attitudes over the last 23 years, and I am not really that interested in listening to their rabid hatred any longer. Now I listen basically in hopes that I will hear some white drug dealer, or other criminal telling where they have just stashed a lot of money. Hopefully, when they leave, I could go get it and move to some place in African where people are more human than most of the whites in America and Canada.

I know one thing for sure. I am a much calmer, happier person now that I know the absolute unadulterated truth about how MOST WHITE PEOPLE and certainly most of the richest and most powerful ones feel about people of my color. They can blow smoke until the cows come home, but I now know what is really going on down deep in their demented minds. Real across the board Integration will never happen in Amerikkka. It is simply impossible for a weaker and smaller groups of people to integrate on all levels with a much larger and stronger groups of whites who far the most part have no real intentions at all of becoming real friends with black people. So now when I go for job interviews, to rent an apartment, buy a home, a car, browse in a store, try to catch a cab in the big city, I know for a surety that if I don't get what I need and deserve it is due to white supremacist attitudes and not anything wrong on my part. That knowledge that so few black people have is priceless. My body vital signs are all great because I now understand the deadly Chess game of white supremacy, and how white people are playing it for white genetic survival, and they will surely lose

eventually. I thank all of you white folks whose hearts are filled with hatred for your dark skinned brothers and sisters for the education you have inadvertently given me. The truth about how you all feel was initially hard for me to swallow, but in the long run it has set me free!

I'm writing a book about what I have learned about white people from decades of quietly listening to them from my home while they revealed their inner most thoughts and desires from the privacy of their homes and cars. On course, now that there is the cell phone they can be over heard practically anywhere.

I'll let you guys be the first to know when we go to press. It should be early spring next year. From the initial response in areas where we have test marketed the book. The title of it will be "Why White people tend to hate!" "Can't live with them, and I can't live without them"

America is on the path to total destruction of all it's citizens simply because it'sleaders and citizens minds have been so misprogrammed with garbage information about the races that they can't feel comfortable treating people of color as they wish to be treated themselves.

See Numbers chapt 12 verse 1-20

See Revelations 2nd page where Jesus is described as a dark skinned man. See "The song of Solomon Chapt 1 verse 5 where Cleopatra describes herself as a black woman wholoves King Solomon who is also black.

See Genesis where Abraham has an old wife Sarai. She tells him to go ino her handmaiden "Hagar the Egyptian,African" He does so and from that union came Ishmael who was the father of the Israelites and the Ishmaelites who were borthers back then, but today the Israelis are trying to commit genocide against their half brothers.

Then Jerry Falwell gets on 60 minutes this evening and declares what I have known for years listening to my scanner. He says "The Jews and the Christians have joined forces to eliminate the Muslims" That's the craziest thing I have ever heard of. American white people hate Jews more than they do blacks. Who do the Jews think are going to be eliminated next after the muslim world has been destroyed...?

Anyway, my scanners have been an amazing window into the bizarre white world and have given me intimate, excellent knowledge on all things white such as birth and death rituals, marriage rituals, how you all interact within your families with your children and each other. How you handle personal sexual relationships. How so many of you all are so quick to steal cable signals, software, anything you can find while constantly blowing smoke about how ethical you are.I've heard hundreds of disgusting gay conversations. How much you goof off at work. How untrustworthy most of you really are when no one is watching. See Enron, Worldcom Qwest Arthur Anderson Merrill Lynch.It is no wonder that the white race is so full of anger. anytime a human mind is wasted filling it with drivel and incorrect information about how this planet was

built, it makes sense that a people would have hig suicide rates, depression rates, drug addiction, and all the other sad ills with which white people are afflicted.

I know one thing for a surety. If judgment day is a reality, then I would not want to be a "white person" :-) You all are going to have the devil to pay when that day comes for all of your hatred and cruelty to people around the world.

And so it goes :-((

If you are listening to 118-174 and 400 MHz then a ham dual band antenna
for 144/440 will do the job. For 30-50 MHz you could use a CB antenna.
I think comet antenna sells a 50/144/440/1.2 GHz antenna for mobile use.
Radio Shack had a 30-800 MHz mag mount for last year, I don't know if
they still offer it.

You are hearing alternator noise. Radio Shack sells a inductor that you
can put in-line with your scanner power cord to help eliminate the hum.

http://www.canoe.ca/CNEWSLaw0210/fosterman_oct2-ap.html

Beating by foster parents caught on tape

WHEATON, Ill. (AP) -- Two foster parents were charged with brutally beating a 15-year-old mentally disabled boy in their care after videotapes from their home were mistakenly captured by a neighbor and turned over to authorities.

Frank Barney, 49, and his wife Marylynnette, 38, were charged with two counts of aggravated battery and one count of criminal neglect of a disabled person. They were each ordered held on $500,000 bond Tuesday.

The case came to light when a neighbor gave Lombard police two videotapes that showed the boy being beaten, authorities said. Prosecutor Joe Birkett said the Barneys had a so-called "nanny cam" in their home.

The camera's wireless signal got crossed with the signal from the neighbor's home security system, which then recorded what was occurring in the Barney home, Birkett said.

The tapes allegedly show Frank Barney hitting the teen with a paddle 38 times, apparently after the boy took an extra hot dog, and punching the boy in the face when he attempted to protect himself.

A search of the Barney home revealed further evidence of physical abuse, Birkett said, but he refused to elaborate.

The child, who was not identified, had lived with the Barneys for two years. He was placed in protective custody. He had welts and bruises on his buttocks and back and lacerations to his lips and forearms, authorities said.
====

Good civic duty by the neighbour, but .. I can't help wondering how "mistakenly" the signals got "crossed". ;^)

It always amazes me what people trust to be broadcast over the airwaves. (I always thought that analog cell phones should have a warning sticker on them: "This is a radio transceiver, not a telephone".)

That's debateable. I once had a package take 11 days to get from
Urbana, IL to Rockford, IL. About a 4 hour drive. Of course this was
back in the day before you could easily call and track shipments.

They had no clue where it was, and told me their trucks didnt have
radios in them :)

Chris:

Definitely check out the PRO-93. But be sure what your requirements are before you plunk down the cash. I was going to buy the "95" until the RS guy told me that it would NOT do trunk tracking and scan conventional freqs at the same time. I wanted to be able to monitor four agencies on one bank, one that was trunked (San Bernardino County Sheriff) and three that were conventional (CDF, USFS, and CHP). The PRO-93 allows me to do this.

I think this capability may vary by manufacturer. My PRO93 enables
delay while trunk-tracking, and since all of the traffic for one set
of talk groups is on the same control channel, it really makes no
difference if it is on delay or not. Having the delay ON allows me to
not miss out on any transmission from any unit.

RS does not sell an interface cable that works with the '93!

If he sold you the 020-0418, or something like that, take it back! It
will not work!

Check at www.pro-92.com in the software section for info on cables and
programs. Best program is the free Win93, which is listed there.

The '95 is a functional equivalent of the '93. If the '93 does what you want, the '95 will also.

In general, the RS guys don't know what they are talking about wrt scanners. Like the RS guy in the next post who sold a cable that doesn't work with the '93.

Walt

PS I'm not being sexist here, I'm giving the RS gals the benefit of the doubt.

Well I guess I bragged to soon about going to radio shack without a catch. I ordered the cable from www.pro93.com for 23 dollars shipped. I downloaded win93 for my software. I really appreictae all the help. You would think spending that kind of money at radio shack they would be better trained. Time to go study the manual for my scanner and decide what I want to put in. I might see if I can sell my old scanners on ebay since this one does everything they do and much more.

thanks again
Chris

3411. Re: Trunk Tracking: To Delay or Not to Delay...

Newsgroup: rec.radio.scanner
Date: 2002-10-08 00:21:49 UTC
From: Mig954@charter.net
Message-ID: <Mig954-0710022021490001@192.168.123.128>
Source record: 43001

You are right about different manufacturers. I was refering to the Pro-93. You may want to re-read the manual. The channel delay, whether you have it on or not, does not work (automatically deactivated) on trunked freqs in a trunked bank. If it did, the scanner would not trunk properly. The freqs for the same conversation are always changing. If it was delayed, you would miss the replies.

Now, that being said, like I mentioned earlier, while trunk-tracking you have a talkgroup delay. Totally different from channel delay. It keeps with the TG ID not the freq. The little "D" on the display has nothing to do with the TG delay.

BTW, the conversations are not coming from the control channel. They come from voice channels. That is what the "VC" on the display means. The control channel automatically decodes the voice channel freq and temporarily puts it in the scanner. Next time you are scanning press the manual button and notice what the Control Channel freq is. When you scan again, notice the VCs are different. You don't even need to have them entered into the scanner. Of course as you know this is true only for Motorola Trunking. You have to enter all the freqs for EDACS.

The 93 software will not work on the 95. I understand the cable will
though. The 93 has 300 channels. The 95 has 1000. Therefore the
software is not compatible. The 93 and 95 are essentially the same. The
number of channels is the only difference. There are no other upgrades.
BTW, The 93 has key tone on/off, CB/Ham, etc.

I don't know about the BC245XLT. I'm pretty sure it is not the same as
the 93. The 93 was made by GRE for RadioShack. Uniden makes the
BC245XLT.

Hope this helps,

Gian

The same cable is used for the '95 as for the '93 and '92, and for the '2067 and '2053. All five scanners are made for RS by GRE.

The BC245 is made by Uniden, and has very little, if anything, in common with the GRE scanners.

Yes, I was referring to the 20-048 cable/software kit. That
cable/software does not work with the PRO-95, '93, '92 radios.

The PRO-95, '93, '92 radios use a different cable, but the same cable
works on all three radios.

I have an Icom R3 for sale. (US Version) in most excellent shape.
Includes all the original accessories and box, (Charger, rechargable
battery, AA spacer, antenna, felt bag, manual)

$300 shipped CONUS.

I also have an Icom R10, also US version, with all original accessories
and box. Again, excellent condition.

$200 shipped CONUS.

Enjoy!

I own a Yuniden SC-150 Sportcat which will not work.
Will not power up via adapter or battery (I have the trunck tracker two and
tested adapter and battery on it and they both work). The radio first
wouldnt charge then stopped responding to battery power and wonder if anyone
might know a possible casue other then something bad on the board (if board
I got a local radio repair shop close by which is an authorized repair shop)

if possible email direct along with post to board

Another thing you could use it for is shortwave. I have a older groundplane (unknown make or model, purchased used and was purchased used before that). I use it on a Radio Shack SW-100. I stripped back the insulation to bare the center conductor, used a old pair of analog headphones (digital will not work, tried it before, cant separate wires right) and twisted the wires to center conductor and soldered them on. Reception increased big time and even on some good days when conditions are real great I can overload the front end with no problem!

Hello all,

I am really new to the whole scanning community (2 days) and as such just found out about Digital Scanners.

Here are my questions:

When listening to the NCPD on my scanner I can not get channels 9 (surveillance) or 10 (car to car). Would one of these new uniden scanners solve this so I could hear these channels?

Does this scanner also have trunking capabilities?

I currently have the new PRO-95 from Radio Shack. The Uniden skips 513-805. Id there anything interesting going on in this range that I will be missing if I change?

Finally, would I be able to listen to Suffolk county clearly if I put a roof antenna on my house?

Thanks for all of you help guys. I'll be back to annoy you some more later.

Tom

This is the Garmin StreetPilot Color Map in like new condition. I have the original box, manuals, serial and power cables, dash mount and TWO 16mb memory cards.To see complete specs on this unit look at the Garmin web page here: http://www.garmin.com/products/colorMap/ and here http://www.gpscity.com/products/garmin/colormap.html It has the latest firmware upgrade installed. I am asking $425 shipped to your home in CONUS.

PL frequency (more accurately: PL tone) is a Motorola trademark (Private Line) for CTCSS. This is Continuous Tone Coded Squelch System, a subaudible tone injected into the transmitted signal by a properly-equipped radio. When received by radios having a CTCSS decoder, only those signals having the correct tone will open the squelch. Two common uses are to control repeaters and when two or more users in a given area are on the same frequency. In either case, only signals with the proper CTCSS tone will open the receiver's squelch.

Why not go to the source. Try the Industry Canada web site Geographical search at http://apollo.ic.gc.ca/pls/eng_alpha/web_search.geographical_input The site was down just a few minutes ago but probably for upgrades to the Data Base. Just enter in the Latitude and Longitude and the frequency range that you want to search and it will give you what you need except police and one or two other protected groups. It also gives the repeter inputs and outputs as well as the address of the registered owner of the frequency. A must have for all Canadian scanner hobbyists.

No cordless phone is immune from being received and listened to. If one person can find a way to make a circuit secure, another can unsecure it. The only impediment is time and dollars.

The moral: Don't rely on a cordless phone regardless of technology to protect your confidential information. Or for that matter, any unencrypted phone line.

That being said, any spread spectrum digital phone, regardless of frequency is reasonably secure.

Keep in mind that all cordless telephones (non cellular), are connected to wired telephone circuits. Wired telephone circuits can be monitored very easily, and have been since their existence!

Best policy...if you don't want someone to hear it, don't say it!

Where can I learn more about how "Filters" work?

Specifically, I have an AOR AR8600 which can accomodate Collins filters and would like to know "what" they do as well as "how" they do it and the potential benefit.

Thanx,
Bob

3433. Beta testers needed for tk7, new software for ICOM IC-Q7A

Newsgroup: rec.radio.scanner
Date: 2002-10-08 15:25:20 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3da2f900$0$1454$272ea4a1@news.execpc.com>
Source record: 43023
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner,alt.radio.scanner

tk7 is a new, open source software for the ICOM IC-Q7A
wide coverage walkie-talkie.

I wrote tk7 using the Tcl/Tk language
so it would work in Linux, MacOS X, BSD, UNIX, Windows (95 and later),
etc. I've used tk7 on Linux and Windows 98SE but want to confirm
that it works ok on Windows XP, Windows ME, Windows 95, and Windows 2000.

tk7 lets you:

(1) Read a memory image from the IC-Q7A walkie-talkie, from a native
tk7 file or from a Q7 file created using Goran Vlaski's
IC-Q7 Programming Utility for Windows.

(2) Display and edit settings from a memory image using a graphical
user interface, then write it back to the radio or save it
in a file.

(3) Import memory channel information from a .csv (comma-separated
file).

(4) Extract memory channel information from a memory image
and export it to a .csv (comma-separated values) file.

(5) Sort memory channels by frequencies within one or both banks.

This is an experimental version of tk7 and is
designed only for the USA version radio, though it may
work with other versions.

I need beta testers who own an IC-Q7 radio and interface cable
to test whether tk7 will read data from the radio, display
it correctly on the graphical user interface, and write data
back to the radio correctly.

You can learn about and freely download a beta test version of tk7
from my home page:

http://parnass.com

I don't warrant the software, though it will cost you nothing.
Thanks.

>Motorola Trunking. You have to enter all the freqs for EDACS.
>

We are on the same page, I just "verbalized" it differently. I only
have 4 control channel freqs programmed into the PRO93 for a specific
"system." I dropped all the other freqs once I realized that they
were irrelevant to the reception. I found this out by noticing that
the displayed voice channel was not something I had programmed.

So you are saying that even though the "D" shows up on the main
display, it is not really delaying. Good to know. Thanks for the
information.

I also have a PRO-43. How does one know if it is modifiable? I
presume we are talking about "cell" mods, in which I have no interest.

I own a pro 26 and yes this has been modified. Where I live it is legal
to hear cell phones. Anyways what are the gaps in a pro 43 versus 26.
except for a minor few 26 really has none. Most ppl i talk to want this
radio if they are not looking at a trunked system

Hi everyone,

I'm interested in buying my first mobile scanner. I'm willing to spend about 400$ in total for the receiver and antenna. Recommend any that can receive CB, HAM, police/fire (including trunked systems like EDACS), cordless phones, cell phones, NOAA weather, hand-held radio, marine and air? They don't have to receive ALL of these... but i'd at least like to have police/fire, cell phones, hand-helds, marine and air.

Regards, DL

Uniden BC780-XLT would be an excellent choice, if you don't need digital.
They will be showing up on the used market in quantities, any day now, as
the newer digital capable model will be coming out shortly.

Anyone know if it's possible to order the PRO-93, 94 or 95 through Rat Shack in Canada... I asked at my local store and the guy showed me a Uniden BC-245XLT and said it was the only one they had and that you had to order it off the radioshack.ca website.. And its the only one listed on the website.

Or, actually, does anyone know of reputable companies in Canada that sell scanners and reasonable prices?

Thanks,
Aaron

Both of these - in my experience - offer fast, reliable service and I
assume you would pay no provincial tax to either one since you are not
in their home province.

To the best of my knowledge Radio Shack Canada is selling out of Scanners, CBs and Ham gear across the country. You can try Burnaby Radio Communications in Burnaby BC or at http://www.burnabyradio.com/dhtml/index.html but I have had some funny experiences with them trying to sell me things that I didn't ask for or want.

The BC-780XLT or wait for the BC-785D if you need digital APCO-25.
As far as cellular you can forget about it. 90% of cellular has gone
digital and more will go digital as the wireless web and color screen
phones become the latest craze.

3452. Help for Sony ICF PRO 80

Newsgroup: rec.radio.scanner
Date: 2002-10-09 10:50:59 UTC
From: Augusto <a.ferretti@mclink.it>
Message-ID: <ao11mhkqi1@newsreader1.mclink.it>
Source record: 43042

Hello, I should repair my Sony ICF PRO80 and cannot find the diagram, do anybody else has it?

In FM mode is ok, at least in 88-108 MHz range; but SSB in HF range does not work at all, fine tune does not work and there is a constant whistle on all HF frequencies (SSB mode). I know that some capacitor may become old but with the diagram it could be easier.

Many thanks in advance

Augusto IK0TUK

I forgot about my 245 for a while and left the charger on it for about
a month. Dead battery pack, and it was normal before. Although this
is anecdotal evidence, I remember to unplug the unit now. :-)

[massive snippage due to the fact that the entire post directly precedes this one....]
>I know one thing for a surety. If judgment day is a reality, then I >would not want to be a "white person" :-) You all are going to >have the devil to pay when that day comes for all of your hatred >and cruelty to people around the world.

>And so it goes :-((

Mister Michael.....
Did you intentionally exclude all the conversations where black folks refer to white folks in a disparaging manner, or does your scanner only receive negative comments from white people because of a special implant in your brain?
I grew up in Washington, D.C. and listened to the other side of the coin all my life.
(I was dark skinned and many black people mistook me for one of their own.)
Gimme a break man, blacks rag on white people every bit as much as vice versa, and when did it become such a huge surprise?

Ferchrissakes, don't you know that 98 per cent of ALL people, of ALL colors, are assholes?

Instead of going off on some lunatic tangent and tying all your hopes and dreams on some jackass who preaches hate, why not save yourself a whole lot of wasted energy and accept the fact that mankind in general is screwed and simply ENJOY the few people OF BOTH COLORS that are not.

If you look hard enough, you will find them.

But you do what you think is best....pray for the destruction of an entire race because your feelings were hurt when you listened in on a private conversation.....yeah sure, that's the ticket.

Louis Faggotkhan needs more sheeple.
We need more hate, that's just what we need.
Why not join Al-Qaeda while you're at it, perhaps you might catch a few tasty snippets from Osama's satellite phone and discover that he hates black folks too.
What on earth will you do then?

I have to recover now.....I'm running out of breath from laughter...

Cheers,
JeffH

Well...the BC780-XLT is within your previously stated price range of $400.00. The new digital version will cost you about the same, plus another $300+ for the digital option card. So that would be way out of your price range. However, it will also be capable of receiving analog signals, with, or without, the digital option card. So you could buy it without, and have the option of upgrading later. The BC780-XLT can not be upgraded.

I was wondering if most of you here use handhelds or a base unit? The only advantage I can see to having a desktop would be if you install an outdoor antenna it would be easier to hook up the coax.

Chris

Yes, but if you notice, the bidders do not look that reputable, so it could
fall though.

I use a base/mobile scanner, mostly because of features I wanted. If I could have found a handheld with the features of the 780XLT I would have bought that.

There should be more differences in the software than just the number
of channels.

If someone has a 95 and a 92/93 PC cable, and likes to pry into things
(would a scanner owner like to pry into things?) I'd enjoy seeing a 95
clone dump.

"slurp", which is on my site at

http://members.cox.net/kplotkin/scanner.htm

should be able to capture it. My e-mail is on my home page - hit the
link at the bottom of the scanner page to get there.

Wouldn't one want to just put a BNC connector right on the end of their cable run? Every connection made generally tends to introduce more noice and interference, and reduces signal strength. For a permenant run, I'd just stick a BNC connector on the end of my cable isntead of using an adapter.

I'm in Canada. http://www.radioworld.ca has it at $599, that's the price i'll be paying even where I live (north of Toronto). So, even if i get it from the US at $360, calculate the exchange rate (1.59731 * 360 = ~$572), duty, and shipping... It's about the same.

Regards, DL

No big deal.... Most handheld scanners seem to have the standard BNC type of connection (although there are a few exceptions probably) and you can just use an adapter if the antenna has a PL-259 type of connector. I have 2 handheld scanners running this way at home. Just a slight twist and the connection is free.

The "usual" Uniden reset should do it:

Turn the radio off. Hold the radio with one hand. With another hand
hold down the [2], [9] and [MANUAL] buttons. With another hand turn the
radio on. This should zero everything out. If you have enough hands.

That's the one that RS sold out for $10 some time ago - I have it up on the roof right now, and it's a strong performer; really pulls in the signals (not very technical report, I know). Someone I know just paid about $30-35 for it, and many places are selling it at list price. Grab it now, you won't be sorry...

Well according to the article they had their system set up to watch their
nanny and the neighbors came in over theirs and that is what they recorded.
Hopefully they just recorded the video, if they recorded any voice then
that can be an illegal wire tap.

It all depends on state law. Here in Oregon you are not allowed to receive
any type of transmission sent unless it is ham, CB or a government station.
So the captured video would be inadmissible in a Oregon court of law,
except in the prosecution of the people that illegally obtained the
transmission.

A desktop scanner often has better immunity from strong signal overload and resulting intermod. Handhelds are designed for use with rubber duck antennas. When connected to a good outdoor antenna, they will often choke.

Handhelds are also designed to be small, light, and draw minimal current from a battery. This often results in compromises. For instance, few if any handhelds will have pre-selector filters in the front end or high IP3 mixers.

If they were very small handhelds it is probably the 399MHz range ISR freqs which you can do a search on and find. If the handheld is larger its probably a RACAL (now Thales) PRC-148 which covers 30 to 512MHZ. I think they are only issuing the elaborate PRC-148 radios to the Special Forces guys and not the regular grunts.

Wiretap laws apply to telephones. There are laws against bugging people, but in this case, they installed the "bug" themselves. Perhaps I'm too cynical (or critical :^) but unless the nanny cam was recently installed, it's a bit odd that he just happened to notice the problem when there was something to report.

I know that there's a difference between Canada and the US on the admissability of improperly obtained evidence, but I forget the details.

> It all depends on state law. Here in Oregon you are not allowed to

It's always (1937?) been illegal to repeat third-party traffic (except ham, CB, etc) but do you mean that Oregon has a law that it's illegal to even *listen* to scanners if it isn't one of the exceptions?

I don't remember if the regs say anything about repeating third-party traffic in the case of a crime being committed. I doubt the police would care that much. I doubt a jury would either. Unless these losers can

afford a really good lawyer, I doubt it'll be an issue. Hmm, physical evidence of beatings too, slam-dunk!

Ron of that ilk.

I just read where the FCC has decided to adopt digital radio
technology.

http://story.news.yahoo.com/fc?cid=34&tmpl=fc&in=Tech&cat=Satellite_and_Digital_Radio

Does this mean that someday in the not-too-distant future we are going
to have to buy new receivers? If not, then what good will it do for
the signal to be transmitted in a digital mode if I can still hear it
on my car radio?

Sign me confused...

Yes, you will need a new receiver to receive digital radio. I read somewhere that incorporating the new digital receivers into car radios will add about a hundred bucks to the price of a radio. They will, however, be able to pick both existing analog radio as well as the new digital transmissions. The article I mentioned said the digital transmitting equipment would cost radio stations around 75K which is pretty cheap.

I had my BC780 tripled to 1500 channels. Works great! I have three sets of 500 channels. Just flip the switch to change between the three different memory sets. Now I can store all of frequencies.

Gary

Source record: 43055

If you're looking for up-to-date scanning information for Eastern Pennsylvania and Northern New Jersey stop by www.pompeii-online.com

If you're looking for more than just the usual frequency lists, 10-codes, and unit-numbers you might consider checking out the bulletin board system. Access to the BBS is FREE and setting up an account is fast and easy. Inside you'll find all of the information here as well as:

E-Mail - Every BBS user is setup with a FREE internet e-mail address

Message Boards - Public discussion areas, some are local and others are networked allowing you to interact with people worldwide. There are about 60 internet newsgroups, 360 Relaynet conferences, and FidoNet is coming soon!

Downloads - You'll find a lot of useful shareware and freeware programs. Decoding software for ACARS, Trunking and a few 'other' modes, receiver control programs, ham radio files and much more.

Online Chat - Allows you to chat live with other system users

Whether you're brand new to this fascinating hobby or consider yourself a "seasoned veteran" I'm sure you'll find the bulletin board worthwhile.

If you're interested, point your browser to: www.pompeii-online.com

(remove nospam to reply)

Three "AA" pack will not last long enough. Batt indicator will come on in
about an hour.

I have used a 4 cell "AAA" holder with no ill effects. I have the ability
to switch to either Nimh or alkaline cells.

The 245 will handle 6 volts. The scanner actually generates about
17 volts inside using some kind of DC to DC converter. If that's not
enough to convince you, Radio Shack's equivalent model uses the same
DC-DC converter and runs on 4 "AA" batteries.

Run time is about 7 hours with Nimh and about 10 with Eveready Energizers.

3518. tk120 v0.9 open source, multi-platform software for Yaesu VR-120

Newsgroup: rec.radio.scanner
Date: 2002-10-11 02:52:39 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3da63d18$0$17646$272ea4a1@news.execpc.com>
Source record: 43057
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk120 version 0.9 is now ready for free download.

tk120 is an open source programming utility for the
Yaesu VR-120 portable receiver.
It runs on Linux, Windows, and (perhaps) MacOS X.

Changes in version 0.9 include:

(1) Added a Sort command in the Data menu to sort memory
channels by frequency or by label within any bank
or within all banks.

(2) Added a command under the Data menu to clear all memory
channels. This is useful before importing a memory
channel CSV file if you want to override the
current channels instead of merging the channels in
the file with the current channels.

You can learn about and download a beta test version of tk120
from my web site:

http://parnass.com

Thanks to Russell Hall, Gary Kinsman, and Torsten Grochowski for
testing tk120. Jim Vincent, KC7RYD, and others helped by
sending me image files from their VR-120s.

I don't warrant the software, though it will cost you nothing.

Plus, a good base/mobile rig will have better audio. Checking the specs on
the various HT scanners I own, 200-300 mw @ 10% THD seems typical. The
base/mobile scanners have 1 watt or greater. Add in a larger speaker for
(hopefully) improved audio fidelity. These days, I wouldn't even try to use
a handheld scanner in my mobile, the audio just can't do the job.
Base/mobile units in the house and truck, handhelds when "foot" mobile.

I tried Ramsey Speech Scrambler / Descrambler SS70A. It is not completely descrambled. I can almost understand some words. If I can adjust frequencies with the software based inverter to figure out how to descramble. Thanks for any advice

They are the ones that led the fight that took the 2 MHz out of our 1.25 M band...

Both useful sets, I think you will find the Bearcat the faster/handier
scanner but the Yaesu the better receiver/channel monitor.

I have many of the southern Arizona, southern California, LA and Oakland
center frequencies in my scanner.... makes interesting listening when
driving and there is nothing else much on the AM radio.....
the airline company VHF and HF frequencies can be fun to listen too
also!!

Any of the Watson Super Gainer's. I have excellent results with them, in particular the 801.

The Ramsey Kit is only so-so when it comes to descrambling speech inversion. If you are truly looking for a hardware solution, look for the CTPDS49 unit. There are a number of posts in this group for the unit. It's a little pricey if buy it pre-assembled, however in kit form, the price isn't too bad. It works very well, and makes a great unit for portable use when a computer isn't available.
http://members.aol.com/ctpds49/index.html

The other means is through software descrambling on a computer. There are three different programs floating around the 'net for this use. Ask in ALT.BINARIES.RADIO-SCANNER for the software. Somebody will be glad to post it up there for you...

I'll second that... the Watson Gainer and SuperGainer are both very good
for VHF/UHF. As is the Diamond RH-77.

Whats a good list of frequencies to keep programmed in your scanner at all times? I will put in frs/murs and the dot frequencies. Also the cordless phone channels but I dont listen to them much (honest!) this link has the best list I've found so far http://www.geocities.com/mn_metroscan/itinerant_freqs.htm Has anyone here compiled a better list? Sometimes I have more fun listening to business and frs radios than I do the police/fire.

thanks!
Chris
